📖 SUBJECT 5: Reading Comprehension (RC) Masterclass & Full Passage Vault (61 Questions)

🎯 Infosys Systems Engineer (SE) | 🗓️ 5-6 Nov 2026 Drive | ⚡ 100% Pure SE Verified

This subject synthesizes all 61 Reading Comprehension questions and full multi-paragraph passages extracted from PrepInsta, CampusMonk, OnlineStudy4U, and College ITM.

5.1 The 4-Phase RC Decoupling Strategy & Trap Elimination Matrix

Phase	Core Objective	Time Limit	Actionable Tactics
Phase 1	**Question Reconnaissance**	30 Sec	Read question stems first; categorize as Factual, Inferential, or Global.
Phase 2	**Structural Skimming**	90-120 Sec	Read paragraph 1, topic sentences, and summary sentences; mark pivot words.
Phase 3	**Targeted Extraction**	30 Sec / Q	Re-read 1 sentence above and below the keyword for contextual proof.
Phase 4	**Trap Elimination**	15 Sec / Q	Eliminate Extreme Words (*always, never*), Out-of-Scope assertions, and Half-Truths.

5.2 PrepInsta Complete RC Passage Vault & Verified Question Bank

Source Portal: PrepInsta Infosys Preparation Suite (`https://prepinsta.com/infosys/english/reading-comprehension/`)
Target Role: Infosys Systems Engineer (SE) | **Category:** 03_Verbal_Ability_English
Total Verified Questions Extracted: 10
Quizzes Covered: quiz-1, quiz-2, quiz-3, quiz-4, quiz-5, quiz-6, quiz-7

📋 Section 1: Rules to Keep in Mind

These rules and fundamental principles govern all Infosys questions on this topic:

- Skim the first and last paragraph to identify the central thesis and primary purpose.
- Read question stems first to identify keywords before scanning the passage.
- Strictly rely on the author's stated facts and assertions; do not inject outside real-world knowledge.
- Basic Grammar

  - Speech and Voices

    - Tenses

- Articles

  - Tenses and Articles

    - Idioms and Phrases

      - Subject Verb Agreement

        - Prepositions and Conjunction

          - Selecting Words

            - Relative Pronoun

              - Sentence Completion

- Sentence Ordering

⚡ Section 2: How to Solve Quickly

Proven time-saving strategies recommended by PrepInsta for Infosys 2026 examination:

1. **Option Elimination via Unit Digits & Multiples:** Before doing full calculations, inspect the options to see if last digits or divisibility by 3, 7, 9, 11 can eliminate 2 to 3 wrong choices.
2. **Approximation & Magnitude Checks:** When exact arithmetic is tedious, round numbers to neat multiples (e.g., 99 ≈ 100) to find the nearest valid option.
3. **Reverse Option Substitution:** In complex algebraic equations, plug option values directly into the question stem to test validity.

🚀 Section 3: Tricks & Shortcuts

Key mathematical formulas, mental-math shortcuts, and speed axioms:

- Tone identification: Look for emotive adjectives (critical, laudatory, pragmatic, cynical, objective).
- Eliminate options that are partially true but contain one unsupported extreme claim.
- Basic Grammar

  - Speech and Voices

    - Tenses

      - Articles

- Tenses and Articles

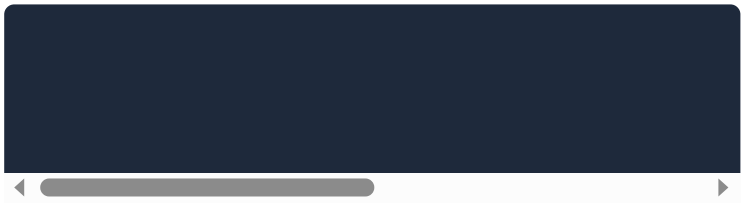

- Idioms and Phrases

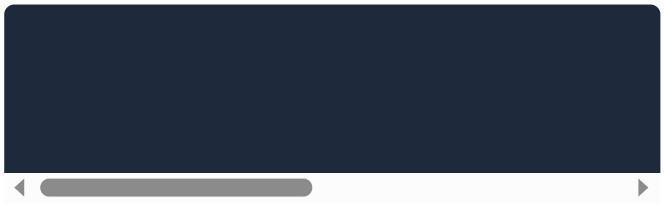

- Subject Verb Agreement

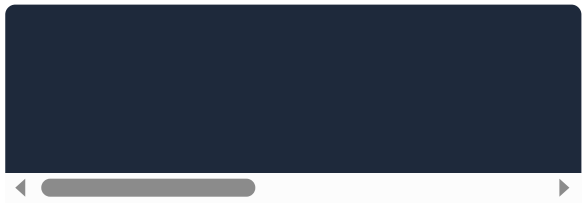

- Prepositions and Conjunction

- Selecting Words

- Relative Pronoun

- Sentence Completion

- Sentence Ordering

📚 Section 4: Practice Questions, Options & Step-by-Step Solutions

Contains **10** verbatim questions with options, verified answer keys, and complete derivations:

Problem 1 • (PrepInsta quiz-1 - Q1) ◯ PRACTICE VARIANT

ID: Q1 | Source: Infosys PYQ | Level: Infosys SE Standard

Question Stem:
Read the given passage and answer the questions :

The economic transformation of India is one of the great business stories of our time. As stifling government regulations have been lifted, entrepreneurship has flourished, and the country has become a high-powered center for information technology and pharmaceuticals. Indian companies like Infosys and Wipro are powerful global players, while Western firms like G.E. and I.B.M. now have major research facilities in India employing thousands. India's seemingly endless flow of young, motivated engineers, scientists, and managers offering developed-world skills at developing-world wages is held to be putting American jobs at risk, and the country is frequently heralded as "the next economic superpower."

But India has run into a surprising hitch on its way to superpower status: its inexhaustible supply of workers is becoming exhausted. Although India has one of the youngest workforces on the planet, the head of Infosys said recently that there was an "acute shortage of skilled manpower," and a study by Hewitt Associates projects that this year salaries for skilled workers will rise fourteen and a half per cent, a sure sign that demand for skilled labor is outstripping supply.

How is this possible in a country that every year produces two and a half million college graduates and four hundred thousand engineers? Start with the fact that just ten per cent of Indians get any kind of post-secondary education, compared with some fifty per cent who do in the U.S. Moreover, of that ten per cent, the vast majority go to one of India's seventeen thousand colleges, many of which are closer to community colleges than to four-year institutions. India does have more than three hundred universities, but a recent survey by the London Times Higher Education Supplement put only two of them among the top hundred in the world. Many Indian graduates therefore enter the workforce with a low level of skills. A current study led by Vivek Wadhwa, of Duke University, has found that if you define "engineer" by U.S. standards, India produces just a hundred and seventy thousand engineers a year, not four hundred thousand. Infosys says that, of 1.3 million applicants for jobs last year, it found only two per cent acceptable.

There was a time when many economists believed that post- secondary education didn't have much impact on economic growth. The really important educational gains, they thought, came from giving rudimentary skills to large numbers of people (which India still needs to do—at least thirty per cent of the population is illiterate). They believed that, in economic terms, society got a very low rate of return on its investment in higher education. But lately that assumption has been overturned, and the social rate of return on investment in university education in India has been calculated at an impressive nine or ten per cent. In other words, every dollar India puts into higher education creates value for the economy as a whole. Yet India spends roughly three and a half per cent of its G.D.P. on education, significantly below the percentage spent by the U.S., even though India's population is much younger, and spending on education should be proportionately higher.

The irony of the current situation is that India was once considered to be overeducated. In the seventies, as its economy languished, it seemed to be a country with too many engineers and Ph.D.s working as clerks in government offices. Once the Indian business climate loosened up, though, that meant companies could tap a backlog of hundreds of thousands of eager, skilled workers at their disposal. Unfortunately, the educational system did not adjust to the new realities. Between 1985 and 1997, the number of teachers in India actually fell, while the percentage of students enrolled in high school or college rose more slowly than it did in the rest of the world. Even as the need for skilled workers was increasing, India was devoting relatively fewer resources to producing them. Since the Second World War, the countries that have made successful leaps from developing to developed status have all poured money, public and private, into education. South Korea now spends a higher percentage of its national income on education than nearly any other country in the world. Taiwan had a system of universal primary education before its phase of hypergrowth began. And, more recently, Ireland's economic boom was spurred, in part, by an opening up and expansion of primary and secondary schools and increased funding for universities. Education will be all the more important for India's well-being; the earlier generation of so-called Asian Tigers

depended heavily on manufacturing, but India's focus on services and technology will require a more skilled and educated workforce.

India has taken tentative steps to remedy its skills famine—the current government has made noises about doubling spending on education, and a host of new colleges and universities have sprung up since the mid-nineties. But India's impressive economic performance has made the problem seem less urgent than it actually is, and allowed the government to defer difficult choices. (In a country where more than three hundred million people live on a dollar a day, producing college graduates can seem like a low priority.) Ultimately, the Indian government has to pull off a very tough trick, making serious changes at a time when things seem to be going very well. It needs, in other words, a clear sense of everything that can still go wrong. The paradox of the Indian economy today is that the more certain its glowing future seems to be, the less likely that future becomes.

Which of these could you infer according to the passage?

A `Wages in the Developing countries are less as compared to wages in the developed countries.`

B `Wages in the Developing countries are more as compared to wages in the developed countries`

C `Wages in the Developing countries are same as wages in the developed countries`

D `None of these`

✓ **Verified Answer:** **(A)** `Wages in the Developing countries are less as compared to wages in the developed countries.` **PrepInsta Detailed Explanation & Mathematical Derivation:** ```text According to the passage it inferred that - Wages in the Developing countries are less as compared to wages in the developed countries ``

There was a time when many economists believed that post- secondary education didn't have much impact on economic growth. The really important educational gains, they thought, came from giving rudimentary skills to large numbers of people (which India still needs to do—at least thirty per cent of the population is illiterate). They believed that, in economic terms, society got a very low rate of return on its investment in higher education. But lately that assumption has been overturned, and the social rate of return on investment in university education in India has been calculated at an impressive nine or ten per cent. In other words, every dollar India puts into higher education creates value for the economy as a whole. Yet India spends roughly three and a half per cent of its G.D.P. on education, significantly below the percentage spent by the U.S., even though India's population is much younger, and spending on education should be proportionately higher.

The irony of the current situation is that India was once considered to be overeducated. In the seventies, as its economy languished, it seemed to be a country with too many engineers and Ph.D.s working as clerks in government offices. Once the Indian business climate loosened up, though, that meant companies could tap a backlog of hundreds of thousands of eager, skilled workers at their disposal. Unfortunately, the educational system did not adjust to the new realities. Between 1985 and 1997, the number of teachers in India actually fell, while the percentage of students enrolled in high school or college rose more slowly than it did in the rest of the world. Even as the need for skilled workers was increasing, India was devoting relatively fewer resources to producing them. Since the Second World War, the countries that have made successful leaps from developing to developed status have all poured money, public and private, into education. South Korea now spends a higher percentage of its national income on education than nearly any other country in the world. Taiwan had a system of universal primary education before its phase of hypergrowth began. And, more recently, Ireland's economic boom was spurred, in part, by an opening up and expansion of primary and secondary schools and increased funding for universities. Education will be all the more important for India's well-being; the earlier generation of so-called Asian Tigers

depended heavily on manufacturing, but India's focus on services and technology will require a more skilled and educated workforce.

India has taken tentative steps to remedy its skills famine—the current government has made noises about doubling spending on education, and a host of new colleges and universities have sprung up since the mid-nineties. But India's impressive economic performance has made the problem seem less urgent than it actually is, and allowed the government to defer difficult choices. (In a country where more than three hundred million people live on a dollar a day, producing college graduates can seem like a low priority.) Ultimately, the Indian government has to pull off a very tough trick, making serious changes at a time when things seem to be going very well. It needs, in other words, a clear sense of everything that can still go wrong. The paradox of the Indian economy today is that the more certain its glowing future seems to be, the less likely that future becomes

In the third sentence of the third paragraph of the passage, the phrase closer to community colleges is used. What does it imply?

A `Near to community colleges`

B `Like community colleges`

C `Close association to community colleges`

D `None of these`

Verified Answer: **(B)** `Like community colleges` **PrepInsta Detailed Explanation & Mathematical Derivation:** ```text It implies that - Like community colleges. ``

Problem 7 • (PrepInsta quiz-1 - Q7) ◯ PRACTICE VARIANT

ID: Q7 | Source: Infosys PYQ | Level: Infosys SE Standard

Question Stem:
The economic transformation of India is one of the great business stories of our time. As stifling government regulations have been lifted, entrepreneurship has flourished, and the country has become a high-powered center for information technology and pharmaceuticals. Indian companies like Infosys and Wipro are powerful global players, while Western firms like G.E. and I.B.M. now have major research facilities in India employing thousands. India's seemingly endless flow of young, motivated engineers, scientists, and managers offering developed-world skills at developing-world wages is held to be putting American jobs at risk, and the country is frequently heralded as "the next economic superpower."

But India has run into a surprising hitch on its way to superpower status: its inexhaustible supply of workers is becoming exhausted. Although India has one of the youngest workforces on the planet, the head of Infosys said recently that there was an "acute shortage of skilled manpower," and a study by Hewitt Associates projects that this year salaries for skilled workers will rise fourteen and a half per cent, a sure sign that demand for skilled labor is outstripping supply.

How is this possible in a country that every year produces two and a half million college graduates and four hundred thousand engineers? Start with the fact that just ten per cent of Indians get any kind of post-secondary education, compared with some fifty per cent who do in the U.S. Moreover, of that ten per cent, the vast majority go to one of India's seventeen thousand colleges, many of which are closer to community colleges than to four-year institutions. India does have more than three hundred universities, but a recent survey by the London Times Higher Education Supplement put only two of them among the top hundred in the world. Many Indian graduates therefore enter the workforce with a low level of skills. A current study led by Vivek Wadhwa, of Duke University, has found that if you define "engineer" by U.S. standards, India produces just a hundred and seventy thousand engineers a year, not four hundred thousand. Infosys says that, of 1.3 million applicants for jobs last year, it found only two per cent acceptable.

There was a time when many economists believed that post- secondary education didn't have much impact on economic growth. The really important educational gains, they thought, came from giving rudimentary skills to large numbers of people (which India still needs to do—at least thirty per cent of the population is illiterate). Question Stem:
Read the following passage and answer the following questions :

If a person suddenly encounters any terrible danger, the change of nature one undergoes is equally great. Sometimes fear numbs our senses. Like animals, one stands still, powerless to move a step in fright or to lift a hand in defense of our lives, and sometimes one is seized with panic, and again, act more like the inferior animals than rational beings. On the other hand, frequently in cases of sudden extreme peril, which cannot be escaped by flight, and must be instantly faced, even the most timid men at once as if by miracle, become possessed of the necessary courage, sharp quick apprehension and swift decision. This is a miracle very common in nature. Man and the inferior animals alike, when confronted with almost certain death ' gather resolution from despair' but there can really be no trace of so debilitating a feeling in the person fighting, or prepared to fight for dear life. At such times the mind is clearer than it has ever been; the nerves are steel, there is nothing felt but a wonderful strength and daring. Looking back at certain perilous moments in my own life, I remember them with a kind of joy, not that there was any joyful excitement then, but because they broadened my horizon, lifted me for a time above myself.

The title that best suits the passage would be:-

A `The Will to Fight`

B `The Miracle of Confronting Danger`

C `The Change of Nature`

D `Courage and Panic`

✓ **Verified Answer:** **(B)** `The Miracle of Confronting Danger` **PrepInsta Detailed Explanation & Mathematical Derivation:** ```text The best title for given passage is - The Miracle of Confronting Danger. ``

Read the passage and answer the question below:

[Passage Excerpt]:
The adoption of Artificial Intelligence (AI) across industries has transformed operational workflows and decision-making processes. While AI can automate routine tasks, reduce human error, and increase efficiency, its integration raises significant ethical and practical concerns. Critics argue that AI can inadvertently perpetuate biases present in training data, leading to unfair outcomes. Furthermore, rapid automation may render certain job roles obsolete, necessitating workforce reskilling. Proponents, however, contend that AI augments human capabilities rather than replacing them, allowing employees to focus on strategic, creative, and interpersonal functions that machines cannot replicate. Organizations that successfully implement AI balance technological innovation with employee empowerment, cultivating an adaptive, forward-thinking culture.

Question:

Question:
The author suggests that successful AI implementation depends on:

- A. Isolating technical teams from executive oversight.
- B. Balancing technical innovation with employee empowerment.
- C. Maximizing workforce reduction at any cost.
- D. Relying exclusively on proprietary vendor software.

✓ **Verified Answer:** B. Balancing technological innovation with employee empowerment.

Problem 006 • (ID: ◯ PRACTICE VARIANT

ID: SEC0405_RC01_Q01 | Source: Module 3_ Reading Comprehension | Level: Infosys SE Standard

Directions (01- 10): Read the following passage carefully and answer the questions given below it. Certain words are given in bold to help you locate them while answering some of the questions.

When we are children growing up, our imagination is the key to untold worlds. And it has been shown that kids with very active imaginations are more likely to dream and strive for greater things as adults. It is a sad fact that all too often, as we grow up, we are told to “get our heads out of the clouds”, to "stop daydreaming", and that living in an imaginary world is not good for us. But stifling your imagination is the worst thing you can do to yourself, as it will only pave the way for accelerated aging, and all too often a life that feels unfulfilled.

Though many take creativity for granted, it is a trait not possessed by everyone. Many people are labelled as primarily “right brained” or “left brained” (if such a thing exists): It is argued that highly intellectual, logical types are less likely to be creative, have less wild imaginations and are typically rule followers who do not believe in much of anything that cannot be logically quantified. Regardless of the left brain / right brain argument, imagination unleashes creativity, allowing you to live a life filled with potential. The creative individual does not see the sky as the limit, instead the limit is as far as he or she can imagine. They not only think outside the box, for them there is no box, and so their brains are constantly challenged, humming and conjuring up all sorts of goodies. Anything the mind can conjure is good enough to become true, be it work, life, personal goals accomplishments or anything. A very good trait to cultivate from childhood.

Empathy is the act of being truly sympathetic to another person, without ever actually experiencing what they are going through yourself. Sadly, many people do not know how to express empathy, and the reason for this is simple; it is not because that person is a bad individual, or mean spirited. It simply means that individual cannot imagine the feelings of the person experiencing a particular event, and thus cannot truly relate. Your imagination may leave you in a good position to offer a shoulder for comfort and support, as you are able to envision going through the same thing as the person suffering, and thus able to demonstrate what you think a person needs at that time. Being of service towards other people in that way, promotes your own mental health and emotional well being.

Those brain connections are a part of what makes you who you are, and forming new connections supports memory functions and keeps the brain vibrant and strong. Your imagination can be a useful tool for strengthening these connections, in order to form long-term memories. Here are two explanations of how memory works; an intellectual will harness and strengthen memory by repetition. Studying work day after day enhances these connections bit by bit, or via physical practice. On the other hand, someone who uses their imagination may know something well, and be able to recall everything without seeming to make an effort. Take for example planning for their wedding. Years and years beforehand, that person could have meticulously planned and imagined their dream wedding, so that when the actual time comes, the planning step and what they want pops up like clockwork.

Q1. What, according to the passage, is/are the disadvantage(s) of constraining the children to be realistic and not imaginative?

(I) it will lead to an unfulfilled life.

(II) They lack empathy

(III) It limits the growth of their brain

EXERCISE 01

Direction: Read the passage below and answer the following questions.

A comprehensive emergency obstetrics and neonatal care centre block will be constructed at an estimated cost of ₹9 crore with World Bank assistance at the Annai Gandhi Memorial Government Hospital here. A three-member World Bank team from New Delhi led by Preeti Kudesia and Sundaranjan S Gopalan, (Senior Health Specialists) and Sangeeta Pinto (Operations Analyst), which visited the site of the proposed block at the Hospital, expressed satisfaction about the site. Talking to the media persons, Dr Preeti Kudesia said that the team-members would discuss about the proposed project with the Tamil Nadu Health Secretary and other officials at Chennai in a day or two. The proposed block was expected to be constructed in a span of two years even though the project period would be three years, she said. She pointed out that the World Bank was supporting the Tamil Nadu Health Systems Project. It provided soft loan to the Tamil Nadu Government for implementing various health projects. The World Bank had provided nearly 90 million US dollars for health care projects in 270 secondary level hospitals in the last five years and planned to provide a total assistance of 117 million US dollars for various health care projects in the next three years in Tamil Nadu. Dr. Kudesia said that her team had earlier visited several hospitals including Namakkal, Salem and Dharmapuri districts in the last few days and pointed out that the team had visited the first Medical College Hospital only in Tiruchi. Dr. MA Aleem, Dean (in-charge) of Annai Gandhi Memorial Government Hospital, took the World Bank team to the maternity ward and explained to them the various developments being carried out in the hospital. He also showed the project plan to the team. V Sukumar, Expert Advisor, Tamil Nadu Health Systems Project, explained about the proposed site for constructing the block.

1.Which of the following is true?

A.The World Bank has provided nearly 90 million US dollars for health care projects

B.The World Bank will provide nearly 90 million US dollars for health care in the future

C.The World Bank has provided nearly 117 million US dollars for health care

D.The US will provide nearly 117 million US dollars for health care

- Only (I)
- Only (II)
- Both (I) and (II)
- Both (II) and (III)
- All

✓ **Verified Answer:** Both (I) and (II)

Directions (01- 10): Read the following passage carefully and answer the questions given below it. Certain words are given in bold to help you locate them while answering some of the questions.

When we are children growing up, our imagination is the key to untold worlds. And it has been shown that kids with very active imaginations are more likely to dream and strive for greater things as adults. It is a sad fact that all too often, as we grow up, we are told to “get our heads out of the clouds”, to "stop daydreaming", and that living in an imaginary world is not good for us. But stifling your imagination is the worst thing you can do to yourself, as it will only pave the way for accelerated aging, and all too often a life that feels unfulfilled.

Though many take creativity for granted, it is a trait not possessed by everyone. Many people are labelled as primarily “right brained” or “left brained” (if such a thing exists): It is argued that highly intellectual, logical types are less likely to be creative, have less wild imaginations and are typically rule followers who do not believe in much of anything that cannot be logically quantified. Regardless of the left brain / right brain argument, imagination unleashes creativity, allowing you to live a life filled with potential. The creative individual does not see the sky as the limit, instead the limit is as far as he or she can imagine. They not only think outside the box, for them there is no box, and so their brains are constantly challenged, humming and conjuring up all sorts of goodies. Anything the mind can conjure is good enough to become true, be it work, life, personal goals accomplishments or anything. A very good trait to cultivate from childhood.

Empathy is the act of being truly sympathetic to another person, without ever actually experiencing what they are going through yourself. Sadly, many people do not know how to express empathy, and the reason for this is simple; it is not because that person is a bad individual, or mean spirited. It simply means that individual cannot imagine the feelings of the person experiencing a particular event, and thus cannot truly relate. Your imagination may leave you in a good position to offer a shoulder for comfort and support, as you are able to envision going through the same thing as the person suffering, and thus able to demonstrate what you think a person needs at that time. Being of service towards other people in that way, promotes your own mental health and emotional well being.

Those brain connections are a part of what makes you who you are, and forming new connections supports memory functions and keeps the brain vibrant and strong. Your imagination can be a useful tool for strengthening these connections, in order to form long-term memories. Here are two explanations of how memory works; an intellectual will harness and strengthen memory by repetition. Studying work day after day enhances these connections bit by bit, or via physical practice. On the other hand, someone who uses their imagination may know something well, and be able to recall everything without seeming to make an effort. Take for example planning for their wedding. Years and years beforehand, that person could have meticulously planned and imagined their dream wedding, so that when the actual time comes, the planning step and what they want pops up like clockwork.

Q2. “Imagination unleashes Creativity”. Justify.

EXERCISE 01

Direction: Read the passage below and answer the following questions.

A comprehensive emergency obstetrics and neonatal care centre block will be constructed at an estimated cost of ₹ crore with World Bank assistance at the Annai Gandhi Memorial Government Hospital here. A three-member World Bank team from New Delhi led by Preeti Kudesia and Sundaranjan S Gopalen, (Senior Health Specialists) and Sangeeta Pinto (Operations Analyst), which visited the site of the proposed block at the Hospital, expressed satisfaction about the site. Talking to the media persons, Dr Preeti Kudesia said that the team-members would discuss about the proposed project with the Tamil Nadu Health Secretary and other officials at Chennai in a day or two. The proposed block was expected to be constructed in a span of two years even though the project period would be three years, she said. She pointed out that the World Bank was supporting the Tamil Nadu Health Systems Project. It provided soft loan to the Tamil Nadu Government for implementing various health projects. The World Bank had provided nearly 90 million US dollars for health care projects in 270 secondary level hospitals in the last five years and planned to provide a total assistance of 117 million US dollars for various health care projects in the next three years in Tamil Nadu. Dr. Kudesia said that her team had earlier visited several hospitals including Namakkal, Salem and Dharmapuri districts in the last few days and pointed out that the team had visited the first Medical College Hospital only in Tiruchi. Dr. MA Aleem, Dean (in-charge) of Annai Gandhi Memorial Government Hospital, took the World Bank team to the maternity ward and explained to them the various developments being carried out in the hospital. He also showed the project plan to the team. V Sukumar, Expert Advisor, Tamil Nadu Health Systems Project, explained about the proposed site for constructing the block.

1.Which of the following is true?

A.The World Bank has provided nearly 90 million US dollars for health care projects

B.The World Bank will provide nearly 90 million US dollars for health care in the future

C.The World Bank has provided nearly 117 million US dollars for health care

D.The US will provide nearly 117 million US dollars for health care

- They become sympathetic.
- They (imaginative people) believe in things that can not be logically quantified.
- They (imaginative people) set their own limit.
- It protects us from day dreaming
- All are correct

✓ **Verified Answer:** They (imaginative people) set their own limit.

The World Bank had provided nearly 90 million US dollars for health care projects in 270 secondary level hospitals in the last five years and planned to provide a total assistance of 117 million US dollars for various health care projects in the next three years in Tamil Nadu. Dr. Kudesia said that her team had earlier visited several hospitals including Namakkal, Salem and Dharmapuri districts in the last few days and pointed out that the team had visited the first Medical College Hospital only in Tiruchi. Dr. MA Aleem, Dean (in-charge) of Annai Gandhi Memorial Government Hospital, took the World Bank team to the maternity ward and explained to them the various developments being carried out in the hospital. He also showed the project plan to the team. V Sukumar, Expert Advisor, Tamil Nadu Health Systems Project, explained about the proposed site for constructing the block.

1.Which of the following is true?

A.The World Bank has provided nearly 90 million US dollars for health care projects

B.The World Bank will provide nearly 90 million US dollars for health care in the future

C.The World Bank has provided nearly 117 million US dollars for health care

D.The US will provide nearly 117 million US dollars for health care

- extraneous
- incumbent
- appraise
- Inchoate
- Expiate

✓ **Verified Answer:** appraise

Directions (01- 10): Read the following passage carefully and answer the questions given below it. Certain words are given in bold to help you locate them while answering some of the questions.

When we are children growing up, our imagination is the key to untold worlds. And it has been shown that kids with very active imaginations are more likely to dream and strive for greater things as adults. It is a sad fact that all too often, as we grow up, we are told to “get our heads out of the clouds”, to "stop daydreaming", and that living in an imaginary world is not good for us. But stifling your imagination is the worst thing you can do to yourself, as it will only pave the way for accelerated aging, and all too often a life that feels unfulfilled.

Though many take creativity for granted, it is a trait not possessed by everyone. Many people are labelled as primarily “right brained” or “left brained” (if such a thing exists): It is argued that highly intellectual, logical types are less likely to be creative, have less wild imaginations and are typically rule followers who do not believe in much of anything that cannot be logically quantified. Regardless of the left brain / right brain argument, imagination unleashes creativity, allowing you to live a life filled with potential. The creative individual does not see the sky as the limit, instead the limit is as far as he or she can imagine. They not only think outside the box, for them there is no box, and so their brains are constantly challenged, humming and conjuring up all sorts of goodies. Anything the mind can conjure is good enough to become true, be it work, life, personal goals accomplishments or anything. A very good trait to cultivate from childhood.

Empathy is the act of being truly sympathetic to another person, without ever actually experiencing what they are going through yourself. Sadly, many people do not know how to express empathy, and the reason for this is simple; it is not because that person is a bad individual, or mean spirited. It simply means that individual cannot imagine the feelings of the person experiencing a particular event, and thus cannot truly relate. Your imagination may leave you in a good position to offer a shoulder for comfort and support, as you are able to envision going through the same thing as the person suffering, and thus able to demonstrate what you think a person needs at that time. Being of service towards other people in that way, promotes your own mental health and emotional well being.

Those brain connections are a part of what makes you who you are, and forming new connections supports memory functions and keeps the brain vibrant and strong. Your imagination can be a useful tool for strengthening these connections, in order to form long-term memories. Here are two explanations of how memory works; an intellectual will harness and strengthen memory by repetition. Studying work day after day enhances these connections bit by bit, or via physical practice. On the other hand, someone who uses their imagination may know something well, and be able to recall everything without seeming to make an effort. Take for example planning for their wedding. Years and years beforehand, that person could have meticulously planned and imagined their dream wedding, so that when the actual time comes, the planning step and what they want pops up like clockwork.

Q9. Choose the word/group of words which is most OPPOSITE in meaning to the word/group of words printed in bold as used in passage.

Meticulously

EXERCISE 01

Direction: Read the passage below and answer the following questions.

A comprehensive emergency obstetrics and neonatal care centre block will be constructed at an estimated cost of ₹9 crore with World Bank assistance at the Annai Gandhi Memorial Government Hospital here. A three-member World Bank team from New Delhi led by Preeti Kudesia and Sundararajan S Gopalan, (Senior Health Specialists) and Sangeeta Pinto (Operations Analyst), which visited the site of the proposed block at the Hospital, expressed satisfaction about the site. Talking to the media persons, Dr Preeti Kudesia said that the team-members would discuss about the proposed project with the Tamil Nadu Health Secretary and other officials at Chennai in a day or two. The proposed block was expected to be constructed in a span of two years even though the project period would be three years, she said. She pointed out that the World Bank was supporting the Tamil Nadu Health Systems Project. It provided soft loan to the Tamil Nadu Government for implementing various health projects. The World Bank had provided nearly 90 million US dollars for health care projects in 270 secondary level hospitals in the last five years and planned to provide a total assistance of 117 million US dollars for various health care projects in the next three years in Tamil Nadu. Dr. Kudesia said that her team had earlier visited several hospitals including Namakkal, Salem and Dharmapuri districts in the last few days and pointed out that the team had visited the first Medical College Hospital only in Tiruchi. Problem 021 • (ID: ◯ PRACTICE VARIANT

ID: SEC0405_RC02_Q01 | Source: Module 3_ Reading Comprehension | Level: Infosys SE Standard

Directions (1-5): Read the given passage and answer the following questions based on the passage.
For almost two decades, the Central Ground Water Board (CGWB) has been reporting on the increasing number of over-exploited blocks across India, the 'dark' category blocks. The recent annual book of CGWB has reported 1,034 units, out of the 6,584 units it monitors, as over-exploited. If this is the 'crisis', then we have had it for long. What has this not received enough attention? Is it because these zones are not in cities?
Just to be sure how critical the 'crisis' is, CGWB's 2013 estimates say that the groundwater development in India is just about 62% of the utilisable groundwater reserves. Similarly, a recent report by the Central Water Commission, prepared in collaboration with the Indian Space Research Organisation (ISRO), asserted that India is not yet in "water scarcity condition". But it is certainly in a "water-stressed condition", with reducing per capita water availability. Here, we certainly don't mean to say that India can continue with the present ways of water management. We also cannot remain in a state of denial that a crisis is not in the making. However, certain steps need to be taken to ensure a more useful and productive discourse about water governance challenges.
First, India needs to reconsider the institutional processes for dissemination of knowledge about water resource management. There is a certain amount of danger inherent in the casual manner in which knowledge about water resources is legitimised and consumed, particularly in these days of 'viral' information.
Second, we need to recognise the crisis is not as much of scarcity as of delivery. The challenge is to ensure an adequate access to quality water, more so in urban areas where inequities over space and time are acute. We need to also realise that with the country's rapid urbanisation, demand cannot be met by groundwater reserves alone. For instance, according to the Delhi Jal Board estimates, groundwater meets just 10% of Delhi's drinking water needs. The rest is met by surface water sources, most of it transported from outside Delhi. The urban needs, which underpin much reporting on 'water crises', need to be met by robust long-term planning and preparation for droughts and other contingencies.
Finally, we need to reconsider our approaches to water governance. We must recognise that the fulcrum of change and action is with the States. For long, water resource departments in States have continued to follow the conventional approaches of supply augmentation. The challenge is that of reorienting themselves towards deploying strategies of demand management, conservation and regulation. The Centre has to work with States towards an institutional change for the necessary course-shift. The Finance Minister, in her budget, repeatedly stated that the government will work with States to address India's national water security challenges. Let us hope that the government intends to _____ (A) federal governance of water resources towards long-term water security.
Q1. What could be the appropriate title of this passage?

- Water crisis
- water crisis: Inadequate rainfall
- Preserving water

- Water governance strategies
- None of These

✓ **Verified Answer:** Water governance strategies

Problem 022 • (ID: ◯ PRACTICE VARIANT

Finally, we need to reconsider our approaches to water governance. We must recognise that the fulcrum of change and action is with the States. For long, water resource departments in States have continued to follow the conventional approaches of supply augmentation. The challenge is that of reorienting themselves towards deploying strategies of demand management, conservation and regulation. The Centre has to work with States towards an institutional change for the necessary course-shift. The Finance Minister, in her budget, repeatedly stated that the government will work with States to address India's national water security challenges. Let us hope that the government intends to _____ (A) federal governance of water resources towards long-term water security.
2.What does the italicized sentence 'we need to recognise the crisis is not as much of scarcity as of delivery' Refers to as per the above passage?

- It is not about water scarcity but water availability.
  Water is not scarce but there is a lack of strategies

to get it properly delivered

- With expanding urbanisation, there is a need to generate methods to access quality water as ground water is not sufficient to meet drinking water needs.
- Surface water is sufficient to meet the demands of drinking water
- Without denying the fact that water crisis is in process, necessary steps must be taken ensuring productive discourse and effective dealing with water governance challenges.
- All of the above

✓ **Verified Answer:** It is not about water scarcity but water availability. Water is not scarce but there is a lack of strategies to get it properly delivered

Directions (1-5): Read the given passage and answer the following questions based on the passage.

For almost two decades, the Central Ground Water Board (CGWB) has been reporting on the increasing number of over-exploited blocks across India, the 'dark' category blocks. The recent annual book of CGWB has reported 1,034 units, out of the 6,584 units it monitors, as over-exploited. If this is the 'crisis', then we have had it for long. What has this not received enough attention? Is it because these zones are not in cities?

Just to be sure how critical the 'crisis' is, CGWB's 2013 estimates say that the groundwater development in India is just about 62% of the utilisable groundwater reserves. Similarly, a recent report by the Central Water Commission, prepared in collaboration with the Indian Space Research Organisation (ISRO), asserted that India is not yet in "water scarcity condition". But it is certainly in a "water-stressed condition", with reducing per capita water availability. Here, we certainly don't mean to say that India can continue with the present ways of water management. We also cannot remain in a state of denial that a crisis is not in the making. However, certain steps need to be taken to ensure a more useful and productive discourse about water governance challenges.

First, India needs to reconsider the institutional processes for dissemination of knowledge about water resource management. There is a certain amount of danger inherent in the casual manner in which knowledge about water resources is legitimised and consumed, particularly in these days of 'viral' information.

Second, we need to recognise the crisis is not as much of scarcity as of delivery. The challenge is to ensure an adequate access to quality water, more so in urban areas where inequities over space and time are acute. We need to also realise that with the country's rapid urbanisation, demand cannot be met by groundwater reserves alone. For instance, according to the Delhi Jal Board estimates, groundwater meets just 10% of Delhi's drinking water needs. The rest is met by surface water sources, most of it transported from outside Delhi. The urban needs, which underpin much reporting on 'water crises', need to be met by robust long-term planning and preparation for droughts and other contingencies.

Finally, we need to reconsider our approaches to water governance. We must recognise that the fulcrum of change and action is with the States. For long, water resource departments in States have continued to follow the conventional approaches of supply augmentation. The challenge is that of reorienting themselves towards deploying strategies of demand management, conservation and regulation. The Centre has to work with States towards an institutional change for the necessary course-shift. The Finance Minister, in her budget, repeatedly stated that the government will work with States to address India's national water security challenges. Let us hope that the government intends to _____ (A) federal governance of water resources towards long-term water security.

Q4. Which of the following statements are not true according to the above passage?

- Conventional methods of supply escalation have been acquired by water resource departments in States.

- The knowledge about legitimization and consumption of water resources is circulated in a casual manner
- Only 10% of Delhi's drinking water needs are fulfilled by ground water
- In urban areas, providing access to sufficient quality water is a challenge due to acute time and space.
- None of these

✓ **Verified Answer:** Conventional methods of supply escalation have been acquired by water resource departments in States.

- Approach
- Destruct
- Strengthen

- Uncertain
- Tinker

✓ **Verified Answer:** Strengthen

Problem 026 • (ID: CORE SE

ID: SEC0405_RC02_Q06 Source: Module 3_ Reading Comprehension Level: Infosys SE Standard

Directions (6-10): Read the given passage and answer the following questions based on the passage.
There has been much development recently with respect to the Protection of Children from Sexual Offences (POCSO) Act, 2012. With an objective of stopping the rampant sexual abuse of children, the Protection of Children from Sexual Offences (Amendment) Bill, 2019 was introduced in the Rajya Sabha in July, and later passed by both Houses of Parliament. It is all set to become the 'law of the land'. The present bill is welcome in certain respects as it specifically defines what 'child pornography' is; 'using a child for pornographic purposes' and for 'possessing or storing pornography involving a child' is punishable. It has also widened the ambit of 'Aggravated sexual assault'.
The highlight of the Bill is the introduction of the death penalty for the rape of minors. The Bill, in its object clause, justifies this by referring to the judgments of the Supreme Court in Machhi Singh (1983) and Devender Pal Singh (2002) in which the court has held that the death penalty can be awarded only in rarest of rare cases. Thus the intention of the Bill is to have a deterrent effect; but it can be argued that the introduction of the death penalty may backfire in cases of child sexual abuse and even have a catastrophic effect. Often, the perpetrators of abuse are family members and having such penalty in the statute book may discourage the registration of the crime itself. Also, it may threaten the life of the minor as the maximum punishment for murder is also the death sentence.
The Justice J.S. Verma Committee, which was constituted in 2013 in the aftermath of the Nirbhaya case, after due deliberations found itself against the imposition of death penalty in rape cases. The 262nd Report of the Law Commission of India, 2015, also provides for abolition of the death penalty except in terror cases.
Today, the death penalty has become a prominent tool of symbolic legislation — a political statement indeed. Many a time, the Government, by introducing the death penalty, portrays itself to be strict and serious with regard to such offences. It largely diverts attention from the core issues of infrastructural apathy, procedural lapses and trial delays and conveniently evades the fact that 'it is the certainty of punishment rather than its severity which has deterrence in real sense'. It is pertinent to note here that even a year-and-a-half after the passage of the Criminal Law (Amendment) Bill, 2018, which introduced the death penalty for rape of a minor girl, such incidents have not been under check. The debate here is not about retaining or abolishing the death penalty but the probable _____(A) of its provision in the Act.
The Supreme Court has recently taken cognisance of the sexual abuse of children, directing its registry to file a case as writ petition with cause title "In-re Alarming Rise in The Number of Reported Child Rape Incidents". The court has also observed that it intends having a 'zero tolerance policy' toward child rape. As data on sexual crimes against children collected by the court show, 24,212 FIRs were filed across India from January to June this year. According to National Crime Records Bureau data of 2016, the conviction rate in POCSO cases is 29.6% while pendency is as high as 89%. The prescribed time period of two months for trial in such cases is hardly complied with.
The court has also taken note of the delay in trials, in turn directing the Central Government to set up special courts within 60 days of the order in each district having more than 100 pending cases under the Act. It is to be seen how long it takes to comply with the order.
The Criminal Law (Amendment) Act, 2018 introduced the death penalty for rape of girls below the age of 12. At the same time, the POCSO Act, under Section 42, provides that where the same act constitutes an offence under the said Act and any other law, then the offender will be punished under the Act or such law, whichever provides for greater punishment. This has created an issue as the effect of such an amendment was death penalty for rape of minor girls but not for assault against minor boys.
The proposed Bill does away with such a discrepancy. It is gender neutral and provides for the death penalty for "aggravated penetrative sexual assault of a child", thus bringing both these pieces of legislation on a par with each other in this respect. With these amendments and with the Supreme Court considering child abuse "intolerable", there seems to be reasonable hope now that vulnerable children could be safer. The Bill is a step forward in preventing child abuse but the consequences of providing for the death penalty need to be closely observed.
Q6. What could be the most appropriate title of this passage?

- Pondering over POSCO Bill
- Life sentence under POSCO Bill
- Diverting attention from core issues under POSCO Bill
- All of the above
- None of These

✓ **Verified Answer:** Pondering over POSCO Bill

Problem 027 • (ID: CORE SE

Directions (6-10): Read the given passage and answer the following questions based on the passage.

There has been much development recently with respect to the Protection of Children from Sexual Offences (POCSO) Act, 2012. With an objective of stopping the rampant sexual abuse of children, the Protection of Children from Sexual Offences (Amendment) Bill, 2019 was introduced in the Rajya Sabha in July, and later passed by both Houses of Parliament. It is all set to become the 'law of the land'. The present bill is welcome in certain respects as it specifically defines what 'child pornography' is; 'using a child for pornographic purposes' and for 'possessing or storing pornography involving a child' is punishable. It has also widened the ambit of 'Aggravated sexual assault'.

The highlight of the Bill is the introduction of the death penalty for the rape of minors. The Bill, in its object clause, justifies this by referring to the judgments of the Supreme Court in Machhi Singh (1983) and Devender Pal Singh (2002) in which the court has held that the death penalty can be awarded only in rarest of rare cases. Thus the intention of the Bill is to have a deterrent effect; but it can be argued that the introduction of the death penalty may backfire in cases of child sexual abuse and even have a catastrophic effect. Often, the perpetrators of abuse are family members and having such penalty in the statute book may discourage the registration of the crime itself. Also, it may threaten the life of the minor as the maximum punishment for murder is also the death sentence.

The Justice J.S. Verma Committee, which was constituted in 2013 in the aftermath of the Nirbhaya case, after due deliberations found itself against the imposition of death penalty in rape cases. The 262nd Report of the Law Commission of India, 2015, also provides for abolition of the death penalty except in terror cases.

Today, the death penalty has become a prominent tool of symbolic legislation — a political statement indeed. Many a time, the Government, by introducing the death penalty, portrays itself to be strict and serious with regard to such offences. It largely diverts attention from the core issues of infrastructural apathy, procedural lapses and trial delays and conveniently evades the fact that 'it is the certainty of punishment rather than its severity which has deterrence in real sense'. It is pertinent to note here that even a year-and-a-half after the passage of the Criminal Law (Amendment) Bill, 2018, which introduced the death penalty for rape of a minor girl, such incidents have not been under check. The debate here is not about retaining or abolishing the death penalty but the probable _____(A) of its provision in the Act.

The Supreme Court has recently taken cognisance of the sexual abuse of children, directing its registry to file a case as writ petition with cause title "In-re Alarming Rise in The Number of Reported Child Rape Incidents". The court has also observed that it intends having a 'zero tolerance policy' toward child rape. As data on sexual crimes against children collected by the court show, 24,212 FIRs were filed across India from January to June this year. According to National Crime Records Bureau data of 2016, the conviction rate in POCSO cases is 29.6% while pendency is as high as 89%. The prescribed time period of two months for trial in such cases is hardly complied with.

The court has also taken note of the delay in trials, in turn directing the Central Government to set up special courts within 60 days of the order in each district having more than 100 pending cases under the Act. It is to be seen how long it takes to comply with the order.

The Criminal Law (Amendment) Act, 2018 introduced the death penalty for rape of girls below the age of 12. At the same time, the POCSO Act, under Section 42, provides that where the same act constitutes an offence under the said Act and any other law, then the offender will be punished under the Act or such law, whichever provides for greater punishment. This has created an issue as the effect of such an amendment was death penalty for rape of minor girls but not for assault against minor boys.

The proposed Bill does away with such a discrepancy. It is gender neutral and provides for the death penalty for "aggravated penetrative sexual assault of a child", thus bringing both these pieces of legislation on a par with each other in this respect. With these amendments and with the Supreme Court considering child abuse "intolerable", there seems to be reasonable hope now that vulnerable children could be safer. The Bill is a step forward in preventing child abuse but the consequences of providing for the death penalty need to be closely observed.

Q7.In what aspects, the present Protection of Children from Sexual Offence (amendment) Bill, 2019 is welcomed?

- It defines child pornography specifically
- It has broadened the domain of aggravated sexual assault
- Death penalty for rape of minors is included in this Bill.
- All of the above
- None of these

✓ **Verified Answer:** All of the above

Problem 028 • (ID: CORE SE

Directions (6-10): Read the given passage and answer the following questions based on the passage.

There has been much development recently with respect to the Protection of Children from Sexual Offences (POCSO) Act, 2012. With an objective of stopping the rampant sexual abuse of children, the Protection of Children from Sexual Offences (Amendment) Bill, 2019 was introduced in the Rajya Sabha in July, and later passed by both Houses of Parliament. It is all set to become the 'law of the land'. The present bill is welcome in certain respects as it specifically defines what 'child pornography' is; 'using a child for pornographic purposes' and for 'possessing or storing pornography involving a child' is punishable. It has also widened the ambit of 'Aggravated sexual assault'.

The highlight of the Bill is the introduction of the death penalty for the rape of minors. The Bill, in its object clause, justifies this by referring to the judgments of the Supreme Court in Machhi Singh (1983) and Devender Pal Singh (2002) in which the court has held that the death penalty can be awarded only in rarest of rare cases. Thus the intention of the Bill is to have a deterrent effect; but it can be argued that the introduction of the death penalty may backfire in cases of child sexual abuse and even have a catastrophic effect. Often, the perpetrators of abuse are family members and having such penalty in the statute book may discourage the registration of the crime itself. Also, it may threaten the life of the minor as the maximum punishment for murder is also the death sentence.

The Justice J.S. Verma Committee, which was constituted in 2013 in the aftermath of the Nirbhaya case, after due deliberations found itself against the imposition of death penalty in rape cases. The 262nd Report of the Law Commission of India, 2015, also provides for abolition of the death penalty except in terror cases.

Today, the death penalty has become a prominent tool of symbolic legislation — a political statement indeed. Many a time, the Government, by introducing the death penalty, portrays itself to be strict and serious with regard to such offences. It largely diverts attention from the core issues of infrastructural apathy, procedural lapses and trial delays and conveniently evades the fact that 'it is the certainty of punishment rather than its severity which has deterrence in real sense'. It is pertinent to note here that even a year-and-a-half after the passage of the Criminal Law (Amendment) Bill, 2018, which introduced the death penalty for rape of a minor girl, such incidents have not been under check. The debate here is not about retaining or abolishing the death penalty but the probable _____(A) of its provision in the Act.

The Supreme Court has recently taken cognisance of the sexual abuse of children, directing its registry to file a case as writ petition with cause title "In-re Alarming Rise in The Number of Reported Child Rape Incidents". The court has also observed that it intends having a 'zero tolerance policy' toward child rape. As data on sexual crimes against children collected by the court show, 24,212 FIRs were filed across India from January to June this year. According to National Crime Records Bureau data of 2016, the conviction rate in POCSO cases is 29.6% while pendency is as high as 89%. The prescribed time period of two months for trial in such cases is hardly complied with.

The court has also taken note of the delay in trials, in turn directing the Central Government to set up special courts within 60 days of the order in each district having more than 100 pending cases under the Act. It is to be seen how long it takes to comply with the order.

The Criminal Law (Amendment) Act, 2018 introduced the death penalty for rape of girls below the age of 12. At the same time, the POCSO Act, under Section 42, provides that where the same act constitutes an offence under the said Act and any other law, then the offender will be punished under the Act or such law, whichever provides for greater punishment. This has created an issue as the effect of such an amendment was death penalty for rape of minor girls but not for assault against minor boys.

The proposed Bill does away with such a discrepancy. It is gender neutral and provides for the death penalty for "aggravated penetrative sexual assault of a child", thus bringing both these pieces of legislation on a par with each other in this respect. With these amendments and with the Supreme Court considering child abuse "intolerable", there seems to be reasonable hope now that vulnerable children could be safer. The Bill is a step forward in preventing child abuse but the consequences of providing for the death penalty need to be closely observed.

Q8. Why it is said in the italicized sentence, 'Today, the death penalty has become a prominent tool of symbolic legislation' mean according to the above passage?

- The idea behind death penalty is to portray strict and serious attitude towards such offences
- It deviates the attention of public from main issues such as infrastructural indifference, lapse in procedural hearings and delayed trials.
- It vanishes the fact that death penalty is a certain punishment which otherwise is constraining in reality.
- All of the above
- None of these

✓ **Verified Answer:** All of the above

Directions (11-15): Read the following passage and answer the following questions based on the given passage.
As the country celebrates 50 years since bank nationalisation, bank employees will be proud that they have contributed to nation-building. Still there are basic issues close to the bankman's heart that are yet to find redressal, observes Jyothi KP, Vice-President, All-India Bank Officers' Confederation, Kerala, and a National Executive Committee member.The Banking Companies (Acquisition and Transfer of Undertakings) Acts of 1970 and 1980 provide that the Central Government, in consultation with the Reserve Bank of India, may make a scheme, inter alia, for amalgamation of any nationalised bank with any other nationalised bank or any other banking institution. Various committees, including Narasimhan Committee (1998) constituted by the RBI, Leeladhar Committee (2008) chaired by the RBI Deputy Governor, and the Nayak Committee (2014) constituted by the RBI, have recommended consolidation of public sector banks (PSBs) given underlying benefits/synergies.
Taking note of this and potential benefits of consolidation for banks as well as the public through enhanced access to banking services, the government, in order to facilitate consolidation among PSBs to create strong and competitive banks, serving as catalysts for growth, with improved risk profile, has approved a framework for proposals to amalgamate PSBs through an Alternative Mechanism.The following amalgamation/mergers have already happened post-nationalisation and some more are reportedly in the pipeline. This creates stress for the employees since they are scared for their existence and job security, observes Jyothi.
Giving a bank employee's perspective, Jyothi recalled that the banking sector was in the red in Q4 of 2018-19 with a loss of ₹20,817 crore. In 2017-18, they had reported a massive loss of ₹85,000 crore forcing lenders to make provisions for bad loans and clean-up of the books.
Till such time a project is commissioned in line with the approved schedule, banks should not be forced to categorise such projects as NPA, notes Jyothi. In the event of classification of big-ticket advances as NPA, the government should pro-actively help banks in realising the public money. It should initiate steps to declare suo moto 50 top NPAs of each banks as wilful defaulters and to publish their names and photos.
For implementing SARFAESI provisions, many bank officers are targeted, even personally. By merely targeting the bank officers responsible for executing the Act, the political fraternity is missing the point to bring amendments to the Act itself.
The humongous challenge of realising the NPA is telling on PSB bottomlines. This is also subjecting the desk officers to unreasonable amount of work pressure and stress.
Irregular working hours, stress on account of financial risk in routine work schedules, technical problems of software, and IT-related issues add to the worries of the already traumatised bank employees.In many cases, their retirement benefits are withheld. Many are arrested and are not aware as to why the arrest is happening in the first place, evening leading to suicides.
According to Section 5 of the Banking Regulation Act, banking means 'accepting, for the purpose of lending and investment of deposits of money from public, repayable on demand or otherwise and withdrawal by cheque, draft, order or otherwise.'However, sale of para-banking products and implementation of government schemes take away the lion's share of working hours of an average PSB employee.As mentioned earlier, when the balance sheet turns red, all blame is shoved on the desk-level officers for non-profitability/non- performance.
Yet, when it comes to wage revision, the question of profitability arise. The settlement takes place between Indian Banks' Association (IBA) and United Forum of Bank Unions (UFBU).
The IBA represents bank managements and the UFBU, officers, employees, and staff organisations. The Charter of demands had been submitted in a time bound manner and the IBA had agreed to complete the process of negotiations expeditiously within the time-frame so as to reach the settlement before October 2017. However, since five major bank managements have not given full mandate for negotiating wages up to scale VII , the AIBOC is not participating in the talks now.
Q11. Why amalgamation of Public sector banks has become a stress lately for the bank employees?

- Proposals to amalgamate PSBs via an alternative method is approved by the government
- The job security and existence of a bank employees becomes questionable
- Because such amalgamations have been done after nationalisation and still followed by more such mergers.
- During the year 2018-2019, banking was insolvent with a loss of 20,817 Crore Rs.
- All of the above

✓ **Verified Answer:** Because such amalgamations have been done after nationalisation and still followed by more such mergers.

Directions (11-15): Read the following passage and answer the following questions based on the given passage.
As the country celebrates 50 years since bank nationalisation, bank employees will be proud that they have contributed to nation-building. Still there are basic issues close to the bankman's heart that are yet to find redressal, observes Jyothi KP, Vice-President, All-India Bank Officers' Confederation, Kerala, and a National Executive Committee member.The Banking Companies (Acquisition and Transfer of Undertakings) Acts of 1970 and 1980 provide that the Central Government, in consultation with the Reserve Bank of India, may make a scheme, inter alia, for amalgamation of any nationalised bank with any other nationalised bank or any other banking institution. Various committees, including Narasimhan Committee (1998) constituted by the RBI, Leeladhar Committee (2008) chaired by the RBI Deputy Governor, and the Nayak Committee (2014) constituted by the RBI, have recommended consolidation of public sector banks (PSBs) given underlying benefits/synergies.
Taking note of this and potential benefits of consolidation for banks as well as the public through enhanced access to banking services, the government, in order to facilitate consolidation among PSBs to create strong and competitive banks, serving as catalysts for growth, with improved risk profile, has approved a framework for proposals to amalgamate PSBs through an Alternative Mechanism.The following amalgamation/mergers have already happened post-nationalisation and some more are reportedly in the pipeline. This creates stress for the employees since they are scared for their existence and job security, observes Jyothi.
Giving a bank employee's perspective, Jyothi recalled that the banking sector was in the red in Q4 of 2018-19 with a loss of ₹20,817 crore. In 2017-18, they had reported a massive loss of ₹85,000 crore forcing lenders to make provisions for bad loans and clean-up of the books.
Till such time a project is commissioned in line with the approved schedule, banks should not be forced to categorise such projects as NPA, notes Jyothi. In the event of classification of big-ticket advances as NPA, the government should pro-actively help banks in realising the public money. It should initiate steps to declare suo moto 50 top NPAs of each banks as wilful defaulters and to publish their names and photos.
For implementing SARFAESI provisions, many bank officers are targeted, even personally. By merely targeting the bank officers responsible for executing the Act, the political fraternity is missing the point to bring amendments to the Act itself.
The humongous challenge of realising the NPA is telling on PSB bottomlines. This is also subjecting the desk officers to unreasonable amount of work pressure and stress.
Irregular working hours, stress on account of financial risk in routine work schedules, technical problems of software, and IT-related issues add to the worries of the already traumatised bank employees.In many cases, their retirement benefits are withheld. Many are arrested and are not aware as to why the arrest is happening in the first place, evening leading to suicides.
According to Section 5 of the Banking Regulation Act, banking means 'accepting, for the purpose of lending and investment of deposits of money from public, repayable on demand or otherwise and withdrawal by cheque, draft, order or otherwise.'However, sale of para-banking products and implementation of government schemes take away the lion's share of working hours of an average PSB employee.As mentioned earlier, when the balance sheet turns red, all blame is shoved on the desk-level officers for non-profitability/non- performance.
Yet, when it comes to wage revision, the question of profitability arise. The settlement takes place between Indian Banks' Association (IBA) and United Forum of Bank Unions (UFBU).
The IBA represents bank managements and the UFBU, officers, employees, and staff organisations. The Charter of demands had been submitted in a time bound manner and the IBA had agreed to complete the process of negotiations expeditiously within the time-frame so as to reach the settlement before October 2017. However, since five major bank managements have not given full mandate for negotiating wages up to scale VII , the AIBOC is not participating in the talks now.
Q12. According to Section 5 of the Banking Regulation Act, what the term 'banking' refers to?

- The bank officers alone are responsible for executing the provisions of Sarfaesi Act.
- Accepting money from public in order to lend and invest
- Repaying the money when demanded or withdrawn via cheque, order, draft and other methods
- Both (b) and (c)
- None of these

✓ **Verified Answer:** Both (b) and (c)

However, since five major bank managements have not given full mandate for negotiating wages up to scale VII , the AIBOC is not participating in the talks now.
Q15. According to Jyothi KP, how government should help banks in realizing the public money?

- Banks should not be forced to categorize bad loans as NPAs till a project through an alternative mechanism is not commissioned.
- The government initiate steps for declaring suo moto in which 50 Top Non Performing Assets of each banks are identified
- The information of such NPAs should be published publicly as wilful defaulters alongside their names and photos
- Both (b) and (c)
- None of these

✓ **Verified Answer:** Both (b) and (c)

Problem 036 • (ID: CORE SE

ID: SEC0405_ENG_SESS_Q01 | Source: Module 3_ Reading Comprehension | Level: Infosys SE Standard

Directions (1-8): Read the following passage and answer the following questions based on the given passage. Some of the words are highlighted which would help you to answer some of the questions given.

All political parties must be mindful of the core values that invigorate Indian democracyAs the countdown for elections to the 17th Lok Sabha begins, the world's largest democracy has a chance to re-imagine itself. Over the last 16 general elections and numerous elections at lower levels, the resolute trust that the founding fathers of the Republic put in the parliamentary democratic system has been substantially proven wise. India did make some dangerous turns and show signs of fragility, especially during the Emergency in the 1970s, but in the long term it expanded the scope of its democracy through widening representation, devolution of power and redistribution of resources. This is not to overlook the various maladies that have afflicted the country's democracy, such as disinformation campaigns, corruption, disenfranchisement of the weaker sections of the society, the corroding influence of money and muscle power in elections, and divisive majoritarian tendencies. (i) The representative character of institutions has in general improved, women and religious minorities are alarmingly underrepresented. The exercise of elections itself is a matter of great pride for all Indians. The Election Commission of India has over the decades evolved itself into a fine institution and plays a critical role in the support of democracy. Its efforts to increase voter participation through a series of small steps over the years, including the use of the Electronic Voting Machines, have been praiseworthy.

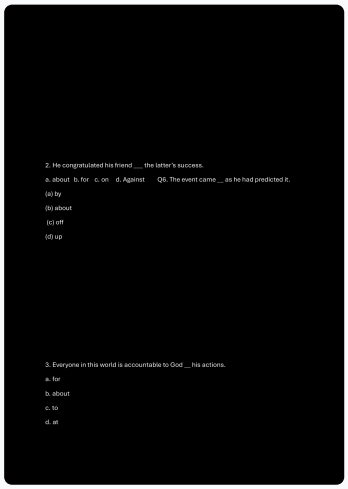

The vulnerabilities of Indian democracy have been pronounced in the last five years, and some of its long-term gains have been undermined. Therefore, this election is more than an exercise to elect a new government. This should also be an occasion to reiterate and reinforce Indian democracy's core values, its representative character and its promise of a constant rejuvenation of the collective spirit. The ECI has announced a series of fresh measures to strengthen the integrity of the electoral process and curb some rapidly growing hazards such as the spread of falsehoods aimed at creating social polarisation for consolidation of votes. Measures such as better monitoring of social media campaigns, while steps in the right direction, are not in themselves adequate to deal with the challenges of these times. The stakes are high for all contenders this year, and Indian politics has reached a level of competitiveness where ground rules of engagement are routinely disregarded. Prime Minister Narendra Modi, who rode to power in 2014 on the agenda of material progress through Hindutva, has to defend his reign to seek a second term. His opponents sense an existential danger from him and are trying to mobilise those left behind or who feel disempowered by his governance. While furthering individual interests, all parties must realise that democracy itself is at stake if the campaign is aimed at communal polarisation. Though the promise of Indian democracy has not been fully realised, voters have remained committed to it. They turn up in large numbers to vote, and consider the very act of voting as empowerment. That trust should be upheld.

Q71. As per the passage given above, how has India managed to amplify its democratic base?

(i) allocation of resources in a way to achieve higher equality

(ii) dilated representation

(iii) decentralized structure of power sharing

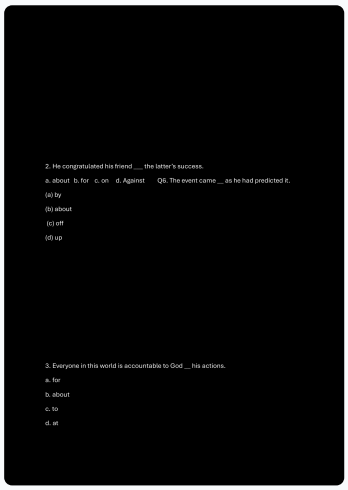

- Both (i) & (ii)
- Both (ii) & (iii)
- Both (i) & (iii)
- All (i), (ii), (iii)
- None of (i), (ii), (iii)

✓ **Verified Answer:** All (i), (ii), (iii)

Reading Comprehension (Questions 1-10)

Directions (1-5): Read the following passage and answer the questions that follow.

The advent of Artificial Intelligence (AI) has been a double-edged sword. On one hand, it has ushered in an era of unprecedented technological advancement, automating complex tasks, and providing insightful data analysis that was previously impossible. Industries from healthcare to finance are leveraging AI to improve efficiency and accuracy. For instance, AI algorithms can detect diseases from medical scans with greater precision than the human eye. On the other hand, the rise of AI poses significant ethical and societal challenges. Job displacement is a major concern, as machines begin to perform tasks traditionally done by humans. Furthermore, issues of data privacy and the potential for algorithmic bias are critical hurdles that society must navigate. An AI system trained on biased data will perpetuate and even amplify existing societal prejudices, leading to unfair outcomes in areas like hiring and loan applications. Ensuring the responsible development and deployment of AI is paramount to harnessing its benefits while mitigating its risks.

1. What is the main idea of the passage?
a) AI is solely a tool for economic growth.
b) The development of AI should be stopped due to its risks.
c) AI offers significant benefits but also presents serious challenges. d) AI's primary impact is on the healthcare industry.

- a) AI is solely a tool for economic growth.
- b) The development of AI should be stopped due to its risks.
- c) AI offers significant benefits but also presents serious challenges. d) AI's

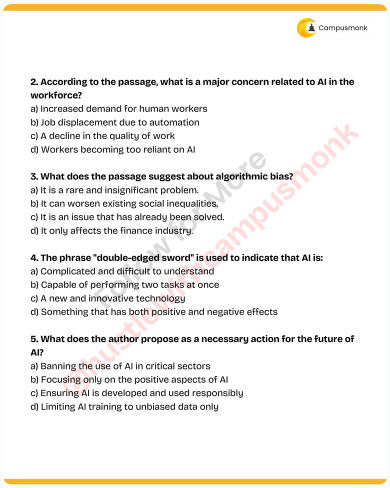

✓ **Verified Answer:** b) It has both significant benefits and notable drawbacks.

Campusmonk

2. According to the passage, what is a major concern related to AI in the workforce?
a) Increased demand for human workers
b) Job displacement due to automation
c) A decline in the quality of work
d) Workers becoming too reliant on AI

3. What does the passage suggest about algorithmic bias?
a) It is a rare and insignificant problem.
b) It can worsen existing social inequalities.
c) It is an issue that has already been solved.
d) It only affects the finance industry.

4. The phrase "double-edged sword" is used to indicate that AI is:
a) Complicated and difficult to understand
b) Capable of performing two tasks at once
c) A new and innovative technology
d) Something that has both positive and negative effects

5. What does the author propose as a necessary action for the future of AI?
a) Banning the use of AI in critical sectors
b) Focusing only on the positive aspects of AI
c) Ensuring AI is developed and used responsibly
d) Limiting AI training to unbiased data only

What is the primary purpose of this passage?

Campusmonk

Directions (6-10): Read the following passage and answer the questions that follow.

The concept of 'sustainability' has become a buzzword in recent years, yet its core meaning is often misunderstood. At its heart, sustainability is about meeting the needs of the present without compromising the ability of future generations to meet their own needs. It is built on three pillars: environmental protection, social equity, and economic viability. Too often, discussions about sustainability focus solely on the environmental aspect, such as reducing carbon footprints or conserving natural resources. While crucial, this perspective is incomplete. True sustainability also requires creating fair and equitable societies where all individuals have access to opportunities and a good quality of life. Furthermore, a sustainable model must be economically viable; businesses and economies must be able to thrive without depleting resources or causing social harm. A truly sustainable solution is one that finds a harmonious balance among these three pillars.

6. What is the primary purpose of this passage?
a) To criticize businesses for not being sustainable
b) To argue that environmental protection is the most important pillar
c) To provide a comprehensive definition of sustainability
d) To discuss the economic challenges of sustainability

- a) To criticize businesses for not being sustainable
- b) To argue that environmental protection is the most important pillar
- c) To provide a comprehensive definition of sustainability
- d) To discuss the economic challenges of sustainability

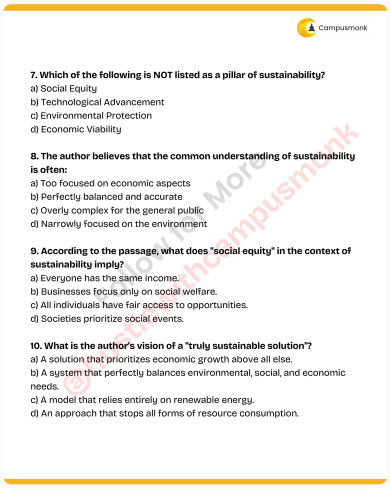

✓ **Verified Answer:** b) Renewable energy sources.
