Question Statement 🔴 [🔥 MUST-SOLVE | INFOSYS SE ACTUAL PATTERN]

> 🎯 **Exam Priority:** 🔴 [🔥 MUST-SOLVE / HIGH RECURRENCE]
> 📊 **Target Difficulty:** `Infosys SE Standard Level` (Single/Double Step Deduction)
> 💡 **Preparation Advice: MANDATORY FOR 5-6 NOV DRIVE** (Direct recurring exam concept)

/ Code Snippet

```
#include<iostream>
using namespace std;
class Test {
static int x;
public:
Test() { x++; }
static int getX() { return x; } };
int Test::x=0;
int main() {
cout<< Test::getX()<<“ “;
Test t[5];
cout<< Test::getX(); }
```

Options

- a) 0 0
- b) 5 5
- c) 0 5
- d) Run time error

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: `Option C`

Step-by-Step Code Execution Trace & Proof

1. In C++, static member variable `x` is shared across all instances of class `Test`.
2. Initially `Test::x = 0`. The first print `Test::getX()` outputs `0`.
3. An array of 5 instances `Test t[5]` is declared, invoking the default constructor 5 times.
4. Each constructor invocation increments `x` (`x++`), so `x` becomes 5.
5. The second print `Test::getX()` outputs `5`.
   Therefore, the output is `0 5` (Option C).

/ Code Snippet

```
#include<iostream>
using namespace std;
class Point {
Point()
 { cout<<“Constructor called”; }
};
int main()
{
Point t1;
return 0;
}
```

Options

- a) Constructor called
- b) Compile time error
- c) Run time error
- d) Blank line

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: `Option B`

Step-by-Step Code Execution Trace & Proof

1. In C++, class members and constructors are private by default if no access specifier is specified.
2. `class Point { Point() { ... } };` declares a private constructor.
3. In `main()`, declaring `Point t1;` attempts to invoke the private constructor from outside the class.
4. This causes a compilation error: 'Point::Point() is private within this context'.
   Therefore, the result is `Compile time error` (Option B).

Which option is false about the
final keyword?
```

Options

- a) A final method cannot be
- b) A final class cannot be extended.
- c) A final class cannot extend other
- d) A final method can be

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: `Option C&D`

Step-by-Step Code Execution Trace & Proof

In Java:
- A final class can extend another class (e.g., `final class B extends A {}` is completely legal).
- A final method is inherited by subclasses; it just cannot be overridden.
Statements C and D are evaluated in the course key (Option C&D).

> 📊 **Target Difficulty:** `Upper Level (Specialist Programmer / Digital Specialist Engineer)`
> 💡 **Preparation Advice:** Complex multi-step problem — target if aiming for higher package (6.25 - 9.5 LPA).

/ Code Snippet

```
find the output of the
following code.
#include<stdio.h>
void main()
{
int i;
for( i=1;i<5;i++)
{
if(i<=3)
continue;
printf (“Hi %d”, i);
}
}
```

Options

- a. HiHiHi123
- b. Hi5
- c. Hi4
- d. Hi4Hi5

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: `Option C`

Step-by-Step Code Execution Trace & Proof

Loop trace for i = 1 to 4:
- i = 1: i <= 3 is true -> continue
- i = 2: i <= 3 is true -> continue
- i = 3: i <= 3 is true -> continue
- i = 4: i <= 3 is false -> prints `Hi 4`
- i becomes 5: i < 5 is false -> loop ends.

Output: `Hi4` (Option C).

> 📊 **Target Difficulty:** Upper Level (Specialist Programmer / Digital Specialist Engineer)
> 💡 **Preparation Advice:** Complex multi-step problem — target if aiming for higher package (6.25 - 9.5 LPA).

/ Code Snippet

```
find the output of the
following code.
#include<stdio.h>
void main()
{
int a=10;
if( a == 010)
printf (“BCA”);
else
printf (“Btech”);
}
```

Options

- a. BCA
- b. Btech
- c. 10
- d. Error

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: Option B

Step-by-Step Code Execution Trace & Proof

In C, integer literals starting with `0` are interpreted in OCTAL base:
- `010` in octal = $1 * 8^1 + 0 * 8^0 = 8$ in decimal.

- Comparing `a == 010` evaluates `10 == 8`, which is FALSE (0).
- The else block executes, printing `Btech` (Option B).

- d. Objects can directly

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: `Option A`

Step-by-Step Code Execution Trace & Proof

In Java, `public static void main(String[] args)` is declared `static` so that the Java Virtual Machine (JVM) can invoke it directly without needing to instantiate an object of the containing class (Option A).
