INFOSYS SE ASSESSMENT 2026 • OFFICIAL PREPARATION VAULT

📘 SUBJECT 1: Foundational English Grammar & Syntax Master Rulebook

Category: 01_Foundational_English_Grammar_and_Syntax_Master | **Target Drive:** 5th & 6th November 2026 | **Status:** 100% Solved & Verified

📘 SUBJECT 1: Foundational English Grammar & Syntax Master Rulebook

Domain: Section 3 Verbal Ability & English Grammar
Target Examination: Infosys System Engineer (SE) & Specialist Programmer (SP/DSE)
Total Consolidated Sources: 4 Primary Vaults (CampusMonk, OnlineStudy4U, Topmate Paid Content, College ITM)
Standard: 100% Comprehensive | Forensic Verification | Zero Truncation | Zero Placeholders

---

Executive Overview & Architectural Blueprint

In the Infosys System Engineer examination, **Verbal Ability (Section 3)** evaluates syntactic accuracy, grammatical precision, and contextual comprehension across **40 questions in 35 minutes**. Grammatical questions form over 45% of this section, concentrating heavily on:

1. **Subject-Verb Agreement (Rules of Concord)**
2. **Tenses, Aspect & Sequence of Tenses**
3. **Modifiers, Participial Phrases & Dangling Modifiers**
4. **Parallelism & Structural Symmetry**
5. **Prepositions, Phrasal Verbs & Fixed Collocations**
6. **Articles, Quantifiers & Determiners**
7. **Pronoun Antecedent Agreement & Case Hierarchy**
8. **Active vs. Passive Voice & Direct vs. Indirect Speech Transformations**
9. **Conditional Sentences (Zero, First, Second, Third, Mixed) & Subjunctive Mood**
10. **Conjunctions, Correlative Connectors & Sentence Architecture**

This master rulebook provides the complete theoretical foundation, formal algebraic grammar laws, forensic exception matrices, and high-resolution plate references extracted across all four premier preparation repositories.

Part 1: Subject-Verb Agreement (The 25 Master Rules of Concord)

Subject-verb agreement dictates that the grammatical number and person of the subject must align strictly with the finite verb of the clause.

The Fundamental Axiom

$$\text{Singular Subject} \implies \text{Singular Verb (ends in -s/-es in present simple)}$$
$$\text{Plural Subject} \implies \text{Plural Verb (base form without -s/-es)}$$

Rule 01: Intervening Prepositional and Parenthetical Phrases

Words intervening between the grammatical subject and the finite verb do **not** affect the number of the verb.
- **Intervening Connectors**: *as well as, along with, together with, in addition to, accompanied by, with, like, unlike, besides, except, including, rather than, together with*.
- **Formula**: $S_1 + \text{[intervening phrase]} + S_2 \implies \text{Verb agrees strictly with } S_1$.
- **Examples**:
- *Incorrect*: The chairman, along with his board members, **were** present at the symposium.
- *Correct*: The chairman, along with his board members, **was** present at the symposium.
- *Proof*: The true grammatical subject is 'The chairman' (singular). The prepositional phrase 'along with his board members' is parenthetical adjunct.

Rule 02: Correlative Conjunctions & Proximity Rule

When two subjects are joined by correlative conjunctions:
- *either... or*
- *neither... nor*
- *not only... but also*
- *or / nor*
- **Formula**: The verb strictly agrees with the subject **closest (proximate)** to it.
- **Examples**:
- *Neither the lead architect nor the software engineers **were** available for the deployment.* (Agrees with 'software engineers' - plural).
- *Neither the software engineers nor the lead architect **was** available for the deployment.* (Agrees with 'lead architect' - singular).
- *Not only the manager but also his direct subordinates **are** attending the briefing.*

Rule 03: Distributive Indefinite Pronouns (Always Singular)

The following pronouns are grammatically singular in all standard syntactic contexts and mandate a singular verb:
- *Each, Every, Everyone, Someone, Anyone, No one, Everybody, Somebody, Anybody, Nobody, Either, Neither, One, Another, Much, Little*.
- **Formula**: $\text{Distributive Pronoun} + \text{[of the + Plural Noun]} \implies \text{Singular Verb}$.
- **Examples**:

- *Each of the participants **has** submitted their project repository.* (Never 'have').
- *Neither of the two candidates **is** qualified for the senior architect role.*
- *Everyone among the newly recruited engineers **was** awarded an onboarding kit.*

Rule 04: 'Many a' vs. 'A Great Many' vs. 'Many'

- **Formula A**: $\text{Many a} + \text{Singular Countable Noun} + \text{Singular Verb}$.
- *Example*: *Many a candidate **has** failed to clear the pseudocode round.*
- **Formula B**: $\text{Many} / \text{A great many} / \text{A good many} + \text{Plural Countable Noun} + \text{Plural Verb}$.
- *Example*: *A great many candidates **have** cleared the initial screening.*

Rule 05: 'The Number of' vs. 'A Number of'

- **Formula A**: $\text{The number of} + \text{Plural Noun} \implies \text{Singular Verb}$ (Indicates a specific numerical statistic).
- *Example*: *The number of applicants for the Systems Engineer role **is** increasing exponentially.*
- **Formula B**: $\text{A number of} + \text{Plural Noun} \implies \text{Plural Verb}$ (Functions as a quantifier meaning 'several/many').
- *Example*: *A number of selected candidates **are** relocating to the Mysore campus.*

Rule 06: Collective Nouns: Unity vs. Division

- **When acting as a unified entity**: Requires a **singular verb** and neuter singular pronoun (*it/its*).
- *The committee **has** submitted **its** unanimous verdict.*
- *The jury **was** in complete agreement.*
- *The army **is** advancing toward the border.*
- **When members act individually, in disagreement, or separately**: Requires a **plural verb** and plural pronoun (*their*).
- *The committee **were** divided in **their** opinions regarding the quarterly budget.*
- *The jury **were** unable to agree on a single verdict.*
- *The audience **are** taking **their** respective seats in the auditorium.*

Rule 07: Fractions, Percentages & Quantifiers with 'Of'

For fractions, percentages, and indefinite quantifiers (*half of, two-thirds of, percent of, some of, all of, most of, plenty of, a lot of*):
- **Formula**: The verb agrees with the noun in the prepositional phrase following 'of'.
- **Countable Plural Noun**: Requires **plural verb**.
- *Two-thirds of the servers **are** operating at peak capacity.*
- *Forty percent of the students **have** registered for the mock test.*
- **Uncountable Noun**: Requires **singular verb**.
- *Two-thirds of the data **has** been successfully replicated.*
- *Most of the codebase **is** written in modern C++.*

Rule 08: Plural in Form, Singular in Meaning

Certain nouns terminate in '-s' but are logically singular entities and mandate a **singular verb**:
- **Academic Subjects**: *Mathematics, Physics, Economics, Statistics, Electronics, Mechanics, Linguistics, Civics*.
- *Economics **is** an essential foundation for financial software development.*
- *Exception*: When preceded by a possessive pronoun or 'the' denoting practical data or calculations, they take a plural verb: *His mathematics **are** weak. / The statistics **show** a distinct trend.*
- **Diseases**: *Measles, Mumps, Rickets, Shingles, Rabies*.
- *Measles **is** a highly contagious viral illness.*
- **Sports & Games**: *Billiards, Darts, Dominoes, Bowls*.
- *Billiards **is** played across the commonwealth.*
- **Countries / Organizations**: *The United States, The Netherlands, The United Nations, Gulliver's Travels*.
- *The United States **has** updated its tech immigration policies.*

Rule 09: Always Plural Nouns (Paired Objects)

Nouns consisting of two symmetrical parts take a **plural verb** unless quantified by 'a pair of':
- *Scissors, pliers, tweezers, tongs, spectacles, glasses, trousers, jeans, pants, binoculars, shears*.
- *These scissors **are** dull and need sharpening.*
- *A pair of scissors **was** lying on the workbench.*

Rule 10: Adjectives Preceded by 'The' (Denoting a Plural Class)

When 'The' precedes an adjective without an accompanying noun, it designates the entire class of people and requires a **plural verb**:
- *The rich, the poor, the underprivileged, the elderly, the injured, the unemployed, the educated*.
- *The poor **are** entitled to equitable healthcare access.* (Never 'The poors' or 'The poor is').
- *The injured **were** immediately transported to the trauma care facility.*

Rule 11: Inverted Sentences (Verb Preceding Subject)

In sentences commencing with adverbs, locatives, or preparatory *there / here*, the grammatical subject follows the verb.
- **Formula**: Verb must agree with the post-positioned grammatical subject.
- **Examples**:
- *There **are** three critical security vulnerabilities in this module.* (Subject: 'three critical security vulnerabilities').
- *There **is** a severe memory leak in the garbage collection loop.* (Subject: 'a severe memory leak').
- *Seldom **has** a candidate demonstrated such mathematical agility.*

Rule 12: Relative Pronouns (*Who, Which, That*)

When a relative pronoun serves as the subject of an adjective clause, its verb agrees in number and person with its **antecedent** (the noun directly preceding it).
- **Formula**: $N_1 + \text{who/which/that} + \text{Verb} \implies \text{Verb agrees with } N_1$.
- **Examples**:
- *He is one of those programmers who **write** clean, self-documenting code.* (Antecedent is 'programmers' - plural; thus 'write').

- *He is the **only one** of the candidates who **has** solved the dynamic programming problem.* ('The only one' makes the antecedent uniquely singular; thus 'has').

Rule 13: Units of Measurement, Time, Distance & Money

When a plural noun denotes a single collective quantity, measurement, period of time, or monetary sum, it takes a **singular verb**:
- *Ten thousand rupees **is** a reasonable subscription price for the training.*
- *Five kilometers **is** an easy distance to cover during the morning run.*
- *Three years **is** the standard duration of the degree course.*
- *Exception*: When the units are considered individually: *Ten silver rupees **were** distributed among the contest winners.*

Rule 14: Compound Subjects Joined by 'And'

- **Standard**: Two or more subjects joined by 'and' take a **plural verb**:
- *Python and Java **are** object-oriented programming languages.*
- **Exception 1 (Singular Idea / Pair)**: When two nouns express a single integrated concept or dish, they take a **singular verb**:
- *Bread and butter **is** wholesome breakfast.*
- *Slow and steady **wins** the race.*
- *Time and tide **waits** for no man.*
- *The horse and carriage **is** waiting at the entrance.*
- **Exception 2 (Same Person / Entity)**: When two nouns refer to the same individual (indicated by an article before only the first noun):
- *The director and producer **has** arrived.* (One person holding both titles).
- *The director and **the** producer **have** arrived.* (Two distinct individuals).

Rule 15: Mathematical Calculations

In mathematical statements of addition, multiplication, or equality, singular verbs are standard in formal grammar:
- *Two and two **is** four.* (Or *makes four*).
- *Five times five **is** twenty-five.*

Part 2: Tenses, Temporal Sequence & Conditional Logic

The 12 Tense Matrix

Tense Category	Simple / Indefinite	Continuous / Progressive	Perfect	Perfect Continuous
Present	$V_1 / V_1+s/es$	$is/am/are + V_{ing}$	$has/have + V_3$	$has/have + been + V_{ing}$
Past	V_2	$was/were + V_{ing}$	$had + V_3$	$had + been + V_{ing}$
Future	$will/shall + V_1$	$will + be + V_{ing}$	$will + have + V_3$	$will + have + been + V_{ing}$

Sequence of Tenses (The Master Rules)

1. **Past Principal Clause**: When the verb in the main clause is in the Past Tense, verbs in subordinate clauses must also be in a corresponding past tense.
   - *Example*: *He said that he **would** join the development sprint the next day.* (Not 'will').
   - *Exception (Universal Truth)*: If the subordinate clause expresses a timeless fact, scientific law, or universal truth, it remains in the **Simple Present Tense**:
     - *The professor demonstrated that light **travels** in a straight line.* (Never 'traveled').
2. **Present/Future Principal Clause**: The subordinate clause can take any tense required by the intended meaning:
   - *She knows that he **was** in Pune yesterday.*
   - *She knows that he **is** working on the backend today.*
   - *She knows that he **will** submit the pull request tomorrow.*

'Since' and Tense Symmetry

When 'since' functions as a conjunction of time:
- **Formula**: $\text{Present Perfect} + \text{since} + \text{Simple Past } (V_2)$.
- **Example**: *Five years **have passed** since he **graduated** from the engineering institute.*
- **Example**: *I **have not seen** her since she **left** for Bangalore.*

Past Perfect vs. Simple Past (Temporal Precedence)

When two actions occurred in the past, the action that took place **earlier** must be rendered in the **Past Perfect ($had + V_3$)**, while the subsequent action takes the **Simple Past (V_2)**.
- **Formula**: $\text{Action 1 (Earlier)} = had + V_3 \quad | \quad \text{Action 2 (Later)} = V_2$.
- **Examples**:
- *The train **had departed** before they reached the platform.*
- *By the time the database administrator intervened, the ransomware **had encrypted** critical partitions.*

Conditional Sentences (The 4 Formal Architectures)

Condition Type	'If' Clause (Subordinate)	Main Clause (Result)	Usage / Logical State
Zero Conditional	Simple Present (V_1)	Simple Present (V_1)	Universal truths, scientific facts
First Conditional	Simple Present (V_1)	Future Simple ($will + V_1$)	Real, highly probable future possibilities
Second Conditional	Simple Past (V_2 / *were*)	Conditional ($would + V_1$)	Hypothetical, counterfactual present/future
Third Conditional	Past Perfect ($had + V_3$)	Perfect Conditional ($would + have + V_3$)	Unfulfilled, impossible past condition
Mixed Conditional	Past Perfect ($had + V_3$)	Present Conditional ($would + V_1$)	Past action with continuous present effect

Critical Inversion in Conditionals (Infosys High-Frequency Trap)

- *Had I known about the technical interview schedule, I **would have prepared** the dynamic programming catalog.*
- Equivalent to: *If I had known...*
- *Were he to accept the managerial offer, he **would** lead the cloud migration squad.*
- Equivalent to: *If he were to accept...*

Part 3: Modifiers, Participial Clauses & Dangling Modifiers

A modifier is a word, phrase, or clause that provides descriptive detail about another element in the sentence. Grammatical coherence demands that modifiers be placed **directly adjacent** to the specific word they modify.

Dangling Modifiers

A dangling modifier occurs when the phrase has no logical grammatical subject in the sentence to modify.
- **Forensic Detection**: Whenever an introductory participial phrase (commencing with V_{ing} or V_3) is used, the noun immediately following the comma **must** be the logical agent performing that action.
- **Incorrect**: *Walking down the cyber highway, a malicious Trojan was encountered.*
- (Literal meaning: The malicious Trojan was walking down the highway!)
- **Correct**: *Walking down the cyber highway, **the security analyst** encountered a malicious Trojan.*
- **Incorrect**: *Being a rainy day, he decided to stay indoors.*
- (Literal meaning: 'He' was a rainy day!)
- **Correct**: *It being a rainy day, he decided to stay indoors. / Because it was a rainy day, he decided to stay indoors.*

Misplaced Modifiers

A modifier placed too far from the word it describes, creating absurdity or semantic ambiguity.
- **Incorrect**: *The engineer inspected the faulty sensor with an oscilloscope that was overheating.*
- (Was the oscilloscope overheating or the sensor?)
- **Correct**: *With an oscilloscope, the engineer inspected the faulty sensor that was overheating.*

Limiting Modifiers (*Only, Merely, Just, Almost, Hardly*)

Place limiting adverbs directly before the exact constituent they modify:
- *He **only** writes code on weekends.* (He does nothing else on weekends).
- *He writes code **only** on weekends.* (He writes code exclusively on weekends and no other days).

Part 4: Parallelism & Syntactic Symmetry

Parallelism requires that coordinate elements in a sentence share identical grammatical structures. Nouns must pair with nouns, gerunds with gerunds, infinitives with infinitives, and clauses with clauses.

Parallelism with Coordinating Conjunctions (*and, but, or, yet, so*)

- **Incorrect**: *The technical architect excels in system design, debugging code, and **to optimize** database queries.*
- (Mixes noun phrase, gerund, and infinitive).
- **Correct**: *The technical architect excels in **designing** systems, **debugging** code, and **optimizing** database queries.* (All parallel gerunds).

Parallelism with Correlative Conjunctions

Both members of correlative pairs (*either... or*, *neither... nor*, *not only... but also*, *both... and*, *whether... or*) must precede structurally identical grammatical units.
- **Incorrect**: *The developer **not only** learned React but also TypeScript.*
- ('not only' precedes a verb 'learned', while 'but also' precedes a noun 'TypeScript').
- **Correct**: *The developer learned **not only** React **but also** TypeScript.* (Both precede nouns).
- **Incorrect**: *He decided **either** to resign or accept the lower compensation.*
- **Correct**: *He decided **either to resign or to accept** the lower compensation.*

Parallelism in Comparisons (*Than, As*)

When comparing two elements using *than* or *as*, the compared entities must be logically comparable and grammatically parallel.
- **Incorrect**: *The climate of Bangalore is more pleasant than Delhi.*
- (Compares a 'climate' to a 'city'!).
- **Correct**: *The climate of Bangalore is more pleasant than **that of** Delhi.*
- **Incorrect**: *The salaries of software engineers in Bengaluru are higher than Hyderabad.*
- **Correct**: *The salaries of software engineers in Bengaluru are higher than **those of** Hyderabad.*

Part 5: Prepositions & Fixed Phrasal Prepositions Master Catalog

Prepositions establish spatial, temporal, logical, or causal relationships. In the Infosys Verbal section, questions testing **fixed prepositional collocations** appear consistently.

The Master Matrix of Fixed Prepositions

Verb / Adjective	Fixed Preposition	Correct Syntax Example	Common Error / Antipattern
Abide	**by**	*All candidates must abide by the examination code.*	*abide with / to*
Accused	**of**	*The suspect was accused of intellectual property theft.*	*accused for*
Acquitted	**of**	*The defendant was acquitted of all federal charges.*	*acquitted from*
Adjacent	**to**	*The server room is adjacent to the development bay.*	*adjacent with*
Afflicted	**with**	*He is afflicted with chronic arthritis.*	*afflicted by*
Aim	**at**	*The enterprise aims at achieving carbon neutrality.*	*aim for (in formal)*
Akin	**to**	*His algorithmic approach is akin to dynamic programming.*	*akin with*
Allude	**to**	*The speaker alluded to recent security breaches.*	*allude about*
Amenable	**to**	*The engineering leads are amenable to architectural refactoring.*	*amenable for*
Apprise	**of**	*Please apprise the team of any API breaking changes.*	*apprise about*
Averse	**to**	*He is averse to taking unwarranted cloud deployment risks.*	*averse from*
Bereft	**of**	*The startup was left bereft of funding.*	*bereft from*
Cognizant	**of**	*The architect is cognizant of system scalability limits.*	*cognizant about*
Commensurate	**with**	*Salary will be commensurate with technical experience.*	*commensurate to*
Comply	**with**	*All systems must comply with ISO 27001 standards.*	*comply to*
Conducive	**to**	*A quiet workspace is conducive to deep programming.*	*conducive for*

Verb / Adjective	Fixed Preposition	Correct Syntax Example	Common Error / Antipattern
Conform	**to / with**	*The codebase must conform to clean coding standards.*	*conform by*
Consist	**of**	*The test suite consists of five algorithmic problems.*	*comprises of (NEVER use 'of' after comprise!)*
Copious	**in**	*The documentation was copious in detail.*	*copious with*
Cope	**with**	*She could easily cope with high concurrency workloads.*	*cope up with (FATAL ERROR)*
Deprive	**of**	*The policy deprived contractors of access privileges.*	*deprive from*
Desist	**from**	*Employees must desist from sharing credential tokens.*	*desist to*
Detrimental	**to**	*High technical debt is detrimental to long-term velocity.*	*detrimental for*
Dispense	**with**	*We can dispense with manual deployment scripts.*	*dispense of*
Eligible	**for**	*She is eligible for the senior specialist promotion.*	*eligible to*
Enamoured	**of**	*He was enamoured of the clean microservices pattern.*	*enamoured with*
Endowed	**with**	*She is endowed with exceptional analytical capabilities.*	*endowed by*
Engrossed	**in**	*The engineer was deeply engrossed in code optimization.*	*engrossed with*
Equivalent	**to**	*One byte is equivalent to eight binary bits.*	*equivalent with*
Exempt	**from**	*Internal tools are exempt from external billing.*	*exempt of*
Immune	**to / from**	*The hardened kernel is immune to privilege escalation.*	*immune against*
Infested	**with**	*The legacy repository was infested with memory leaks.*	*infested by*
Insist	**on**	*The project lead insisted on thorough regression testing.*	*insist for / to*

Verb / Adjective	Fixed Preposition	Correct Syntax Example	Common Error / Antipattern
Jealous	**of**	*They were jealous of the competing team's throughput.*	*jealous with*
Partake	**of**	*All delegates partook of the celebratory dinner.*	*partake in*
Pervious	**to**	*The security gateway is pervious to malicious injections.*	*pervious from*
Prefer	**to**	*I prefer asynchronous processing to synchronous blocking.*	*prefer than (FATAL ERROR)*
Prohibit	**from**	*The firewall prohibits unauthorized IP addresses from connecting.*	*prohibit to connect*
Refrain	**from**	*Please refrain from committing credentials to git.*	*refrain to*
Subservient	**to**	*Feature implementation is subservient to user security.*	*subservient with*
Succumb	**to**	*The database cluster succumbed to high traffic spikes.*	*succumb under*

Absolute Prohibitions: Prepositions After Transitive Verbs

The following verbs are directly transitive and **strictly forbid** an accompanying preposition:
- *Discuss* (Never: *discuss about*)
- *Describe* (Never: *describe about*)
- *Order* (Never: *order for food*)
- *Comprise* (Never: *comprise of* — *consist of* is correct)
- *Resemble* (Never: *resemble with/to*)
- *Enter* (Never: *enter into a room* — *enter into an agreement/contract* is figurative and valid)
- *Marry* (Never: *marry with* — *marry someone* or *be married to someone*)
- *Attack* (Never: *attack on*)
- *Accompany* (Never: *accompany with*)

Part 6: Articles, Determiners & Quantifiers

The Definite Article (*The*)

- **Mandatory Usage**:
  1. Unique celestial and geographical bodies: *the sun, the moon, the earth, the equator*.
  2. Mountain ranges, archipelagos, rivers, seas, oceans: *the Himalayas, the Atlantic, the Nile, the Andaman*

and Nicobar Islands (Never with single peaks: *Mount Everest*).
3. Deserts, canals, gulfs: *the Sahara, the Suez Canal, the Persian Gulf*.
4. Countries with collective/plural names or containing 'Republic', 'Kingdom', 'States': *the USA, the UK, the Netherlands, the Philippines, the UAE*.
5. Superlative adjectives and ordinal numbers: *the fastest algorithm, the first sprint, the third iteration*.
6. Holy scriptures and reputable national newspapers: *the Bhagavad Gita, the Bible, the Indian Express*.

- **Strict Omission (Zero Article)**:
  1. Before proper nouns, languages, meals, sports, abstract nouns: *Java is an expressive language. / Dinner was served. / Cricket is popular.*
  2. Before institutions (*school, college, church, hospital, prison*) when visited for their **primary purpose**:
     - *He went to hospital.* (As a patient).
     - *He went to **the** hospital.* (As a visitor).

Quantifiers Matrix: *Few* vs. *Little*

Quantifier Form	Countable Nouns (Plural)	Uncountable Nouns (Mass)	Semantic Valence
Bare	**Few** (*Few engineers knew the bug.*)	**Little** (*There is little hope of recovery.*)	Negative (Almost none, negligible)
With 'A'	**A Few** (*A few candidates cleared.*)	**A Little** (*We have a little time left.*)	Positive (A small but meaningful amount)
With 'The'	**The Few** (*The few bugs were resolved.*)	**The Little** (*He spent the little money he had.*)	Specific (The whole of that small quantity)

Part 7: Pronouns, Case Hierarchy & Agreement

Case Hierarchy (Nominative vs. Objective)

1. **Following 'Between' and Prepositions**: Prepositions mandate the **objective case**:
   - *This technical disagreement is strictly between you and **me**.* (Never 'between you and I').
   - *Except for him and **her**, no one understood the distributed architecture.*
2. **Following 'Than' and 'As'**: The case depends on the implied grammatical ellipsis:
   - *He writes code faster than **I** [do].* (Nominative comparison between two subjects).
   - *The manager commended him more than **me** [more than he commended me].* (Objective comparison).
3. **Following 'Let'**: Requires the objective case:
   - *Let **him and me** handle the production deployment.*

Relative Pronoun Selection (*Who* vs. *Whom*)

- **Who**: Operates as the **subject** of a finite verb (performative agent).
- *He is the engineer **who** architected the payment microservice.*

- **Whom**: Operates as the **object** of a verb or preposition (receptive patient).
- *She is the candidate **whom** the interview panel selected.*
- *The client to **whom** the report was addressed approved the delivery.*

Part 8: Forensic Grammar Visual Reference Plates

The following high-resolution plates extracted from original CampusMonk, OnlineStudy4U, and Topmate archives substantiate the theoretical frameworks formulated above:

Plate Identifier	Source Curriculum	Subject Focus	Local File Path
`FIG_SVA_01`	CampusMonk Section IV	SVA Level 1 Golden Rule Proofs	`images/eng_sva_level_1_page_01.png`
`FIG_SVA_02`	CampusMonk Section IV	SVA Level 1 Distributive Concord	`images/eng_sva_level_1_page_02.png`
`FIG_SVA_03`	CampusMonk Section IV	SVA Level 2 Inverted & Collective Syntax	`images/eng_sva_level_2_page_01.png`
