🔒 AI PROCTORING & HARDWARE COMPLIANCE SPECIFICATIONS (MANDATORY CHECKS)

ZERO DISQUALIFICATION RULE

1. Screen & Hardware Rules:

- **Dual Monitor Ban:** External monitor cable physically unplug karein. Virtual display driver detected = instant termination.
- **Browser Lockdown:** Use latest Google Chrome. Close AnyDesk, TeamViewer, Skype, WhatsApp, Discord via Task Manager.
- **Extensions:** Disable Grammarly, AdBlockers, Screen Recorders before launching assessment.

2. Camera, Audio & Rough Sheet Positioning:

- **Front Lighting:** Light source aapke chehre ke saamne hona chahiye (piche khidki/bulb se face dark ho jata hai).
- **Audio Threshold:** No whispering, no reading questions aloud. Headphones/Earphones are strictly prohibited.
- **Rough Sheet Placement:** A4 sheet ko keyboard ke theek aage rakhein taaki downward glance naturally camera zone me rahe.

⚠️ THE 2 GOLDEN TEST PLATFORM LAWS:

1. **ZERO Negative Marking:** Official Infosys assessment screen explicitly states NO negative marks. Never leave any question blank! Mark your best guess before timer ends.
2. **STRICT Forward Navigation:** Ek baar "NEXT" click kiya toh peeche wapas nahi aa sakte! Section ke andar bhi backward lock hota hai.

💻 SECTION 4: PSEUDO CODE (THE HIGHEST ROI TECHNICAL SCORER)

🔥🔥🔥 2.0 MARKS PER QUESTION

THE SECRET WEAPON: "THE VARIABLE TRACE LEDGER"

Dimaag me dry run mat karo! Apne register me 4 columns banao: | `Line No` | `a | b | c` | `Condition (T/F)` | . Har step par variable ki value strike-through karke nayi value likho. 100% accuracy guaranteed.

1. Bitwise Operators
XOR (^), AND (&), OR (|), Shifts (<<, >>)
	🔥🔥🔥
	★★★★★
		• `a ^ a = 0`, `a ^ 0 = a`.
		• `a & (a - 1)` clears lowest set bit.
		• Left Shift: `a << k = a * 2^k`.
		• Right Shift: `a >> k = a / 2^k`.
		• Bitwise precedence is LOWER than relational!

2. Recursion & Call Trees
Base cases, Multiple branches, Tree accumulation, Static Scope
	🔥🔥🔥
	★★★★★
		• Draw recursion trees on paper with return values.
		• **Trap:** Tail call vs Head call (Order changes).
		• **Global/Static:** Variables retain modified values across calls!
		• Base condition checks: `if (n <= 1) return n`

3. Nested Loops & Iteration
Dependent inner loops, Step skips, Jump breaks, Logarithmic steps
	🔥🔥
	★★★★
		• Outer loop `i = 1 to n`, inner loop `j = i to n`.
		• **Trap:** `continue` skips rest of current step.
		• Step changes: `i = i * 2` (logarithmic steps).
		• Track final loop counter value after exit!

4. Arrays, Strings & Pointer Math
1-based vs 0-based index traps, Matrix indexing, String ASCII math
	🔥🔥
	★★★★
		• Infosys pseudocode often uses **1-based indexing:** `arr[1]` is first element!
		• Array boundary overflow: `arr[i + 1]` when `i = n`.
		• String ASCII math: `str[i] - 'A'` yields 0-25 alphabetic index.
		• Swap without temp: `a ^= b; b ^= a; a ^= b;`

5. Modulo & Integer Division
Truncation, % with negatives, Parity bit checks
	🔥🔥
	★★★
		• Integer division truncates: `7 / 2 = 3`.
		• Modulo power of 2: `n % 8 == n & 7`.
		• Parity checks: `if (n & 1)` means odd!
		• Division by zero returns runtime error.
