

Types of tree traversals :-

1. BFS -> Level order traversal
2. DFS -> (Preorder,Inorder and Postorder traversal)

Level order traversal :-

```
/**
 * Definition for a binary tree node.
 * struct TreeNode {
 *     int val;
 *     TreeNode *left;
 *     TreeNode *right;
 *     TreeNode() : val(0), left(nullptr), right(nullptr) {}
 *     TreeNode(int x) : val(x), left(nullptr), right(nullptr) {}
 *     TreeNode(int x, TreeNode *left, TreeNode *right) : val(x), left(left),
right(right) {}
 * };
```

```
 */
class Solution {
public:
    vector<vector<int>> levelOrder(TreeNode* root) {
        vector<vector<int>>ans;
        queue<*TreeNode> q;
        q.push(root);
        while(!q.empty()){
            int siz= q.size(); //level
            vector<int>lev;
            for(int i=0;i<siz;i++){ //all nodes in a particular level
                TreeNode *node = q.front();
                q.pop();

                if(node->left !=NULL)
                    q.push(node->left);
                if(node->right!=NULL)
                    q.push(node->right);

                lev.push_back(node->val);
            }
            ans.push_back(lev);
        }
        return ans;
    }
};
```
