TOPIC: TSD

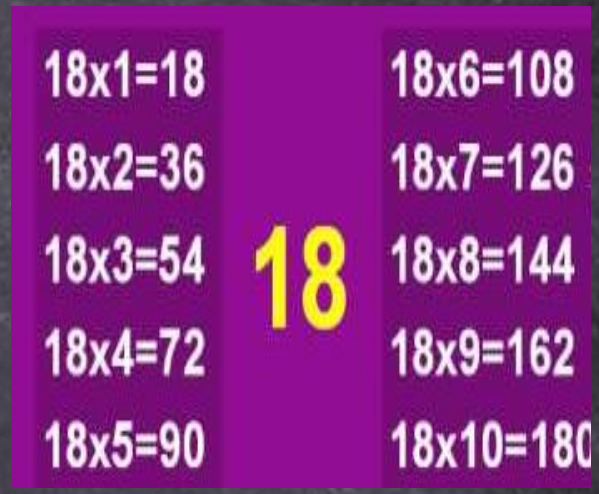

Type - Trains

DAY 01

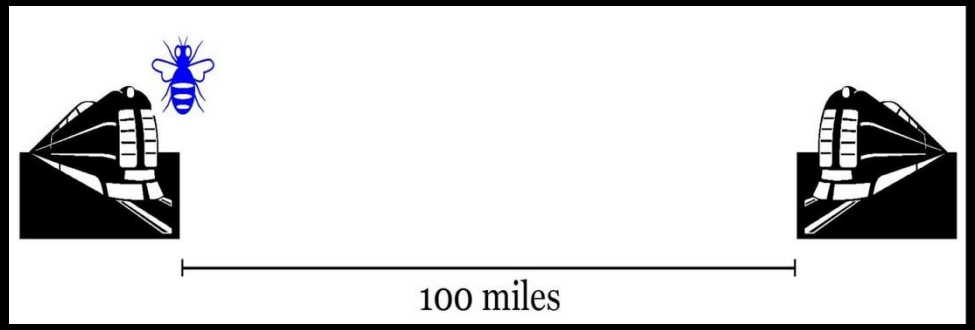

LIVE CLASS

Concept Building Sheet Foundation

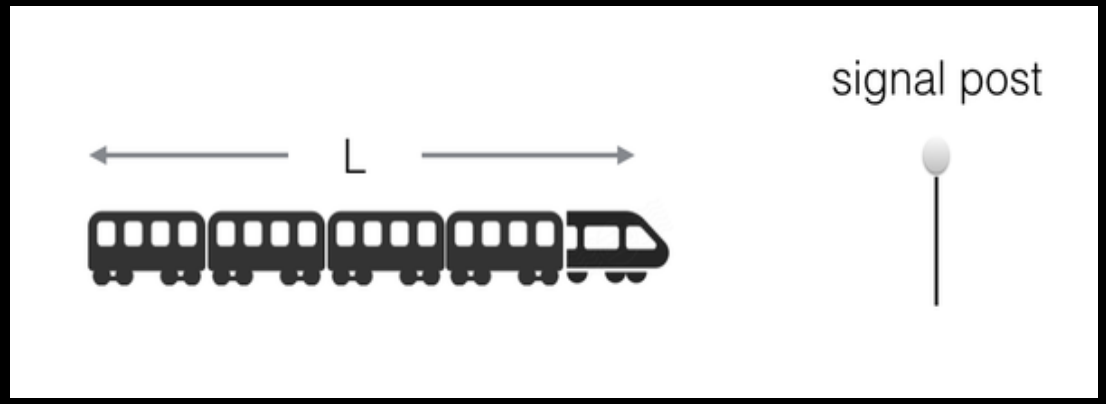

Concept Building Sheet

Question of the day :

Two trains are on the same line, 100 miles apart, heading towards each other, each traveling at 20 mph. A fly that can travel at 40mph leaves one engine flying towards the other. Upon reaching the other engine, it instantaneously turns around, and heads back to the other engine. This is repeated until the two trains crash and the fly is annihilated at the same time.

Question: How far does the fly travel before it is "splatted"?

Q. 1

A 340 m long train crosses a pole in 20 seconds. What is the speed of train (in m/s)?

1) 15 2) 9 3) 17 4) 12 5) None of these

Q2:

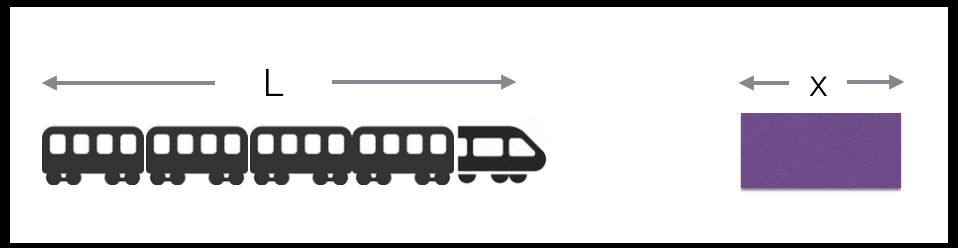

A train of length 170 m running at 72 kmph cleared a tunnel in 18 sec. What is the length of the tunnel?

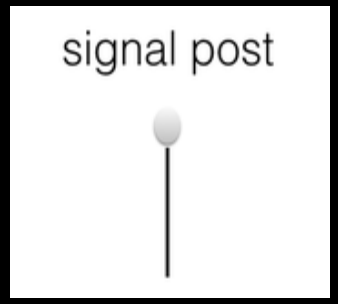

1) 200 m 2)190 m 3) 185 m 4) 206 m 5) None of these

Q.3:

A train of length 120 m long crosses a pole in 3 sec. How long will it takes to cross a railway platform of length 240 m?

1) 4.5 sec 2) 3.5 sec 3) 5 sec 4) 9 sec 5) None of these

Q.4 A goods train runs at the speed of 72 kmph and crosses a 250 m long platform in 26 seconds. What is the length of the train?

1) 230 m 2) 240 m 3) 260 m 4) 270 m 5) None of these

Q5 .

A train 100 m long passes a telegraph pole in 4 sec. How long will it takes to cross a railway platform of length 150 m?

1) 4.5 sec 2) 3.5 sec 3) 5 sec 4) 10 sec 5) None of these

Concept Building Sheet

Question 6:

Two trains 230 m and 270 m long are running in opposite directions at speeds of 42 km/h and 48 km/h, respectively. They cross each other in:

TITA

Question 7:

Two ants of length 1 cm and 1.2 cm crawl in opposite directions with average speeds of 2 and 3 mm per second respectively. How many seconds will they take to cross each other?

TCS NINJA

Question 8:

Two trains, P and Q, are running in parallel tracks in opposite directions with lengths of 110 m and 140 m, respectively.

Train P is running at a speed of 70 km/h and took 5 seconds to cross train Q. The speed of train Q is:

TITA

Question 9:

A 270 m long train running at the speed of 120 kmph crosses another train coming from opposite direction at the speed of 80 kmph in 9 seconds. What is the length of the other train?

1) 230 m
2) 240 m
3) 260 m
4) 320 m
5) None of these

Question 10:

A train of 220 m in length moving at the speed of 72 km/h crosses another train of 230 m length coming from opposite direction in 9 seconds. The speed of the train (in km/h) is:

TITA

Question 11:

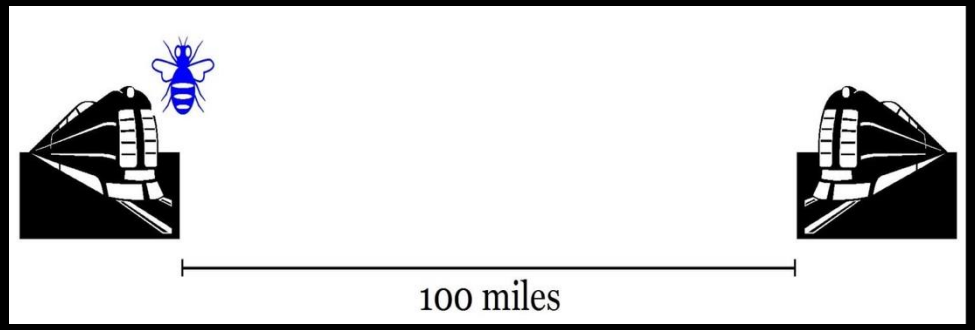

A train running at the speed of 48 kmph crosses another train coming from the opposite direction in 18 seconds. What is the length of first train?

1) 200 m 2) 100 m 3) 150 m 4) Cannot be determined 5) None of these

Question 11:

Rajdhani Express train of length 108 m is running at the speed of 128 km/h. Another train of length 148 m is standing at the station. In what time will the Rajdhani Express cross the other train?

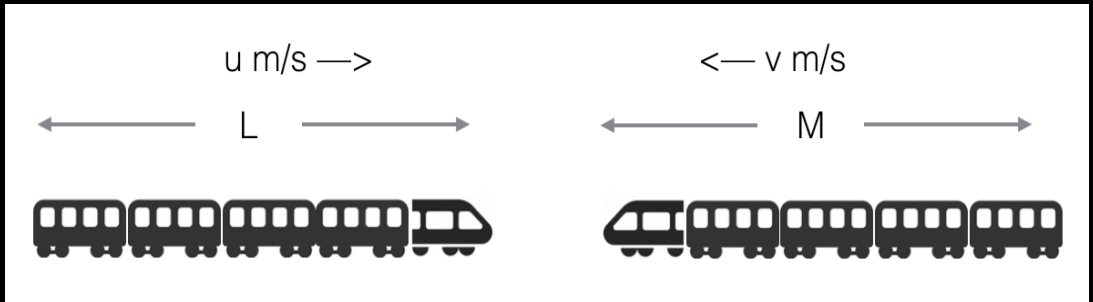

1) **8 sec**
2) **7.5 sec**
3) **7.2 sec**
4) **None of these**

Question of the day :

Two trains are on the same line, 100 miles apart, heading towards each other, each traveling at 20 mph. A fly that can travel at 40mph leaves one engine flying towards the other. Upon reaching the other engine, it instantaneously turns around, and heads back to the other engine. This is repeated until the two trains crash and the fly is annihilated at the same time.

Question: How far does the fly travel before it is "splatted"?

Question 12:

A train running at the speed of 72 kmph crosses another train coming from the opposite direction at the speed of 54 kmph in 10 seconds. What is the length of first train if the length of the second train is 150 m?

1) 200 m

2) 100 m

3) 150 m

4) Cannot be determined

5) NOT

Question 13:

A 270 m long train running at the speed of 120 kmph passes another train running in same direction at the speed of 80 kmph in 36 seconds. What is the length of the other train?

1) 130 m 2) 240 m 3) 260 m 4) 320 m 5) None of these

Question 14:

Two trains of lengths 310 m and 330m respectively, are 160 m apart. They start moving towards each other on parallel tracks, at speeds 130km/h and 158 km/h, respectively. In how much time (in seconds) will the trains cross each other?

TITA

Question 15:

Train- A crosses a stationary train – B in 35 seconds and a pole in 14 seconds with the same speed. The length of the train – A is 280 metres. What is length of the stationary train – B?

(a) 360 metres (b) 480 metres (c) 400 metres

(d) 420 meters (e) 300 meters

Question 16:

A 320 metres long train moving with an average speed of 120 km/hr crosses a platform in 24 seconds. A man crosses the same platform in 4 minutes. What is the speed of the man in metre/second?

(a) 2.4 m/sec (b) 1.5 m/sec (c) 1.3 m/sec (d) 2.0 m/sec (e) 4 m/sec

Question 17:

A train crosses a 400 m-long platform in 50 seconds. It crosses another 600 m-long platform in 60 seconds. What are the length and the speed of the train ?

A. 600 m; 72 km/h
B. 550 m; 75 km/h
C. 500 m; 70 km/h
D. 650 m; 74 km/h

Question 18:

A 320 metres long train takes 80 seconds more time to cross a platform than it takes to cross a pole at the same speed. If the length of platform is twice the length of train, then find the speed of the train.

(a) 16 m/sec (b) 10 m/sec (c) 6 m/sec(d) Cannot be determined (e) None of these

Question 19:

A 240 metres long train crosses a platform twice its length in 40 seconds. What is the speed of the train?

(a) 6 meters/sec (b) 28 meters/sec

(c) 18 meters/sec (d) 16 meters/sec

(e) 45 meters/sec

Question 20:

A train running at $40\frac{1}{2}$-km/h takes 24 second to cross a pole. How much time in second will it take to pass a 450 m long bridge?

Question 21:

Train A travelling at 126 km/hour completely crosses Train B in 9 seconds. Train B is half the length of train A and is travelling at a speed of 90 km/hour in the opposite direction (towards train A). How much will train A take to cross a platform of length 690 metres?

(a) 28 seconds (b) 32 seconds

(c) 25 seconds (d) 30 seconds

(e) 46 seconds
