# TCS QUESTIONS ASKED IN 2025

Q1. A man sold a toy for Rs. 10620 but incurred a loss of 10%, If he wants to gain a profit of 12% then how much he has to sell?

SP = 10,620

Loss = 10%

$SP = \frac{CP \times (100 - \text{Loss}\%)}{100}$

$10620 \times 100 = CP \times 90$

$CP = \frac{10620 \times 100}{90}$

$CP = 11800$

Profit = 12%

$SP = \frac{CP \times (100 + \%\text{profit})}{100}$

$SP = \frac{11800 \times 112}{100}$

$= 13216$ ✓

| SP | Loss | SP |
|---|---|---|
| 10620 | (100 − 90) | x |
| : | :: | : |
| 90 | | 112 |

$\frac{10620}{90} \times \frac{x}{112}$

$x = \frac{10620 \times 112}{90} = 13216$ ✓

# TCS QUESTIONS ASKED IN 2025

Q2 A income is 18200. He spents his 89% as expenditure. Calculate his saving?

A Income = 18200

Spending = 89%

Saving = 11%

$= 18200 \times \frac{11}{100}$

2002

$182 \times 11$

182

182

2862

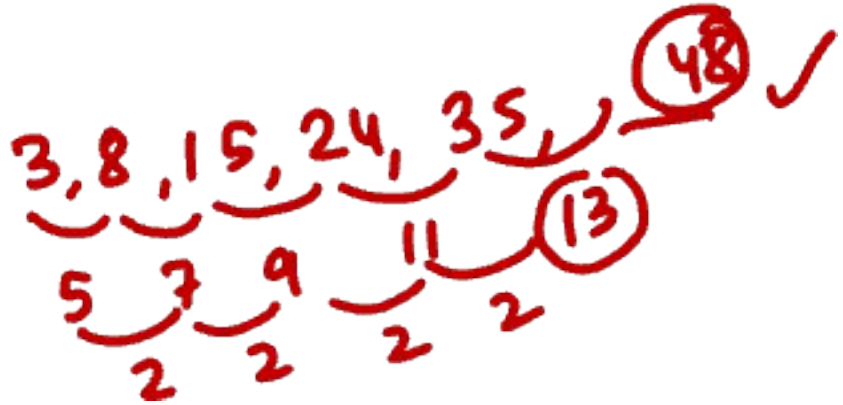

100 20% = 20

100 - 20 = 80

Q3. Series Based problem

3, 8, 15, 24, 35, ?

# TCS QUESTIONS ASKED IN 2025

Q4 2 Men can do a work in 14days. The find how many men are required to finish the work in 4 days?

7 days

Time and work

$\frac{M_1 D_1}{W_1} = \frac{M_2 D_2}{W_2}$

$\frac{2 \times 14}{W} = \frac{M_2 \times 4}{W}$

$M_2 = 7$

Trying ??

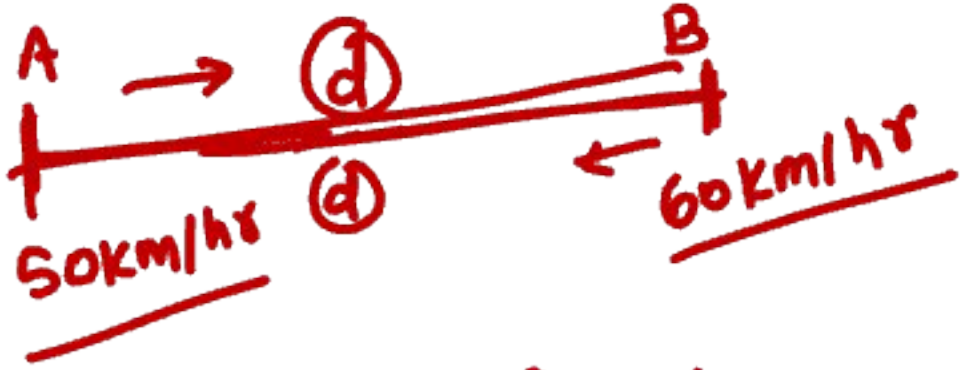

$\frac{M_1 D_1}{W_1} \quad \frac{M_2 D_2}{W_2}$

H= hours.

Q5. A train moves from A to B and returns from B to A but the speed from A to B was 50km/hr and the speed from B to A is 60km/hr. what is the average speed of the train??

$$\text{Avg. speed} = \frac{2S_1S_2}{S_1+S_2}$$

$$= \frac{2\times50\times60}{50+60}$$

$$= \frac{2\times50\times60}{110} = \frac{600}{11} = 55.5 \text{ km/hr}$$

# TCS QUESTIONS ASKED IN 2025

Q6. Find the minimum value of f(x) = 3 + | 2x + 11 |

a. 4 b.3 c.2 d.0

$f(x) = 3 + |2x + 11|$

$2x = -11$

$x = -11/2$

$-11 + 11 = 0$

0

$f(-11/2) = 3 + 0 = 3$

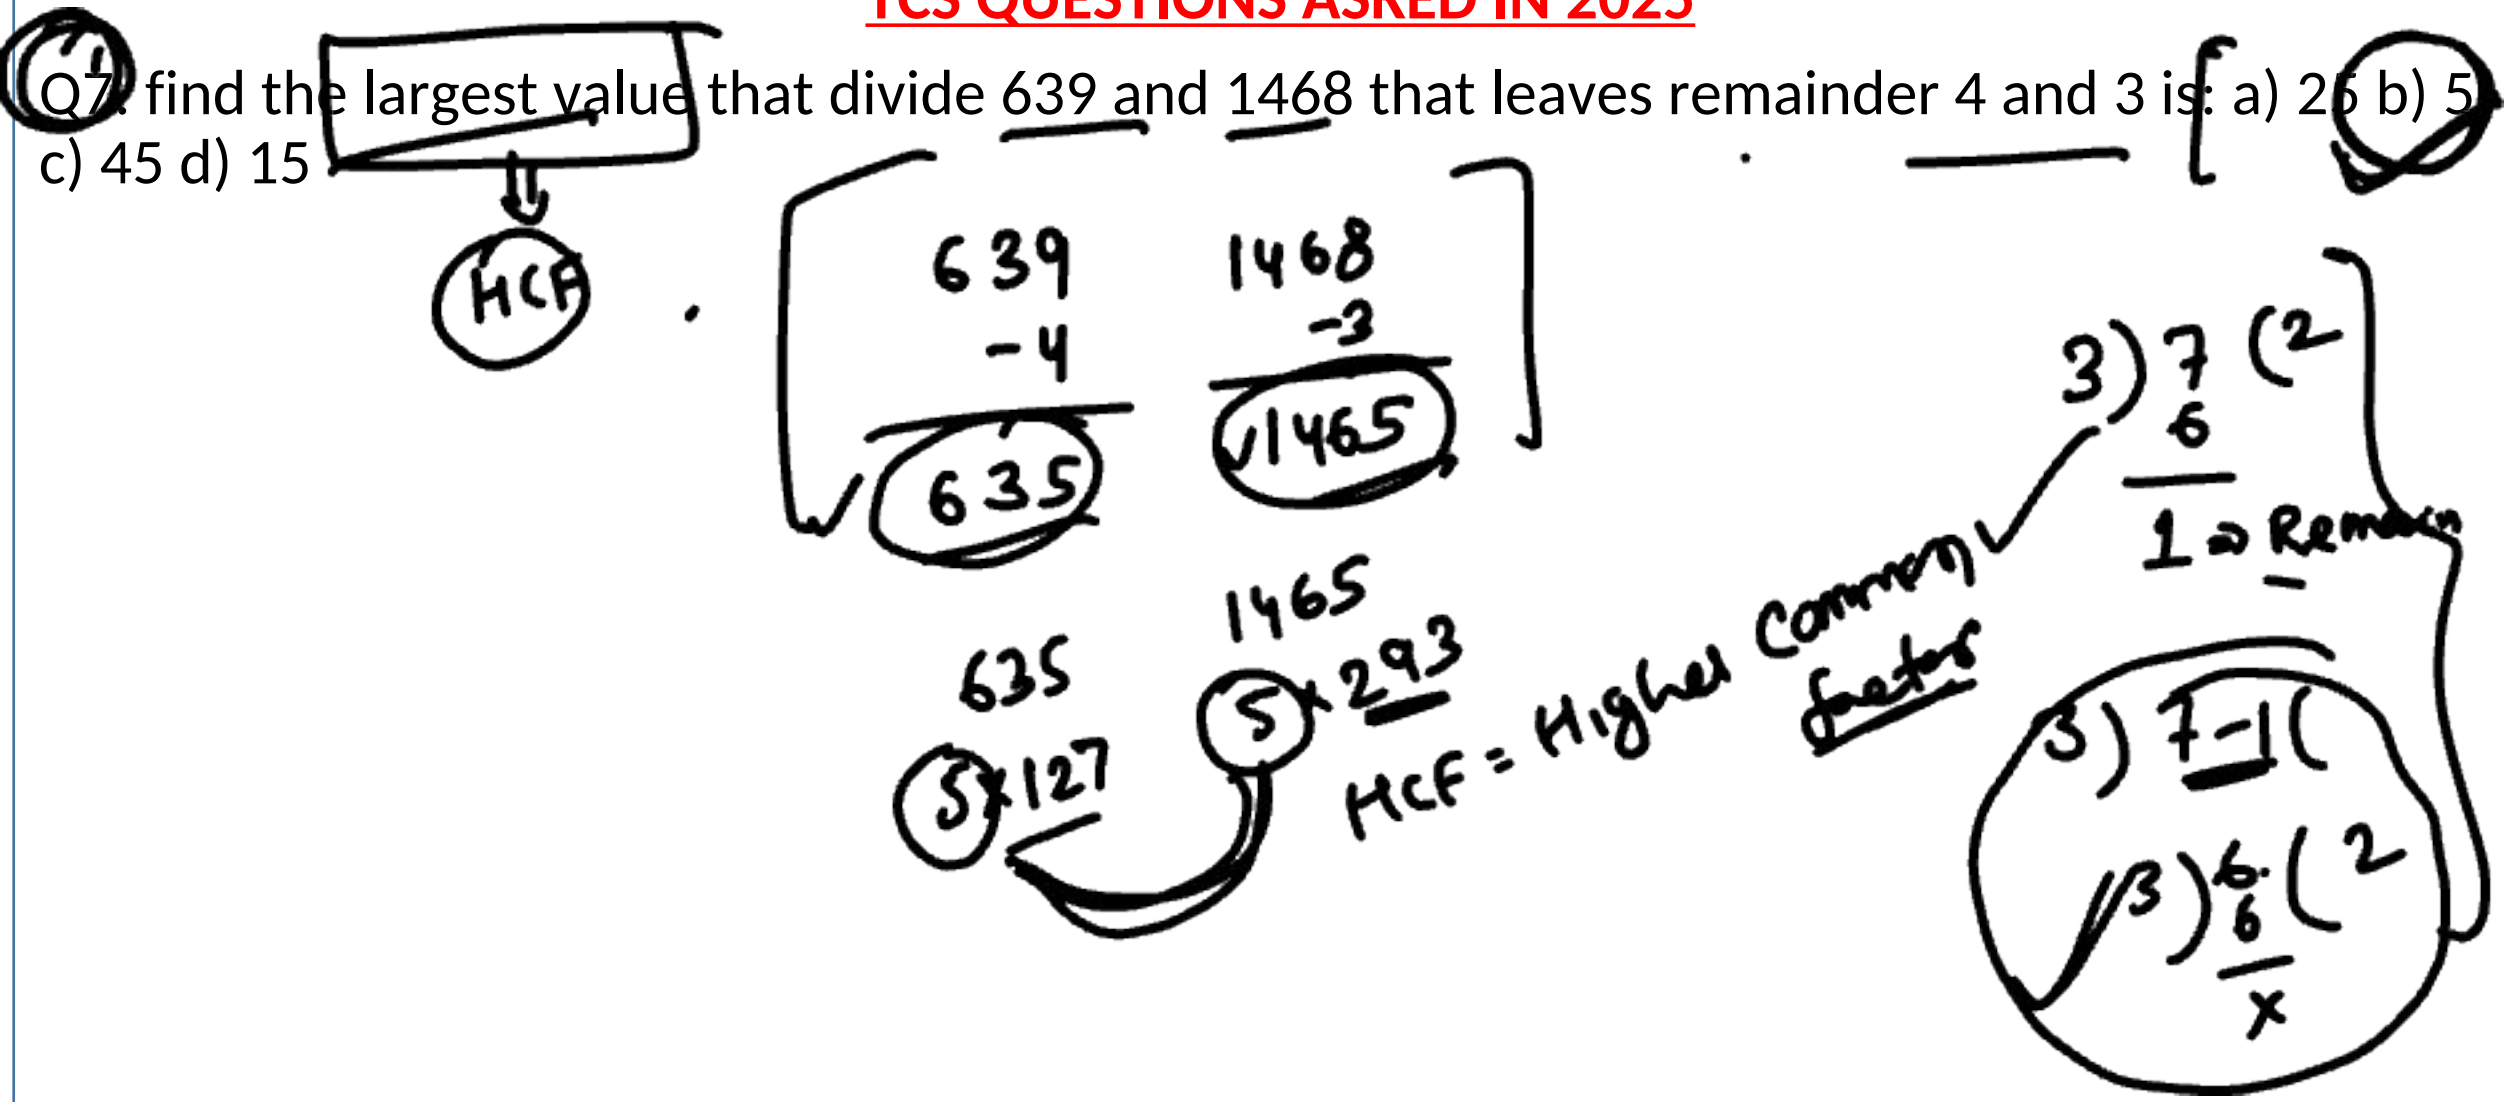

3 ≠ 2

when f(x) is 0 for what value of x, f(x) will be minimum

$x = -11/2$

# TCS QUESTIONS ASKED IN 2025

Q7. find the largest value that divide 639 and 1468 that leaves remainder 4 and 3 is: a) 26 b) 5 c) 45 d) 15

# TCS QUESTIONS ASKED IN 2025

Q8. A man age present age is two and half times of sum of ages of his two daughters. 30 years later his age will the sum of ages of his two daughters. Then what will be man ages in 12 years from now?

$2\frac{1}{2} = \frac{5}{2} \Rightarrow M = \frac{5}{2}(D_1 + D_2)$

$M = \frac{5}{2}x \Rightarrow x = \frac{2M}{5}$ ✓

$D_1 + D_2 = x$

30 30

$50 + 12 = 62$ ✓

$(M+30) = D_1 + 30 + D_2 + 30$

$M + 30 = x + 60$

$M + 30 = \frac{2M}{5} + 60$

$M - 2M = 300$

$5M - 2M = 300$

$3M = 300$

$M = 100$

Q9. if L,N,M are mode,median and mean then which of the following is correct?

a) L= 2N-3M

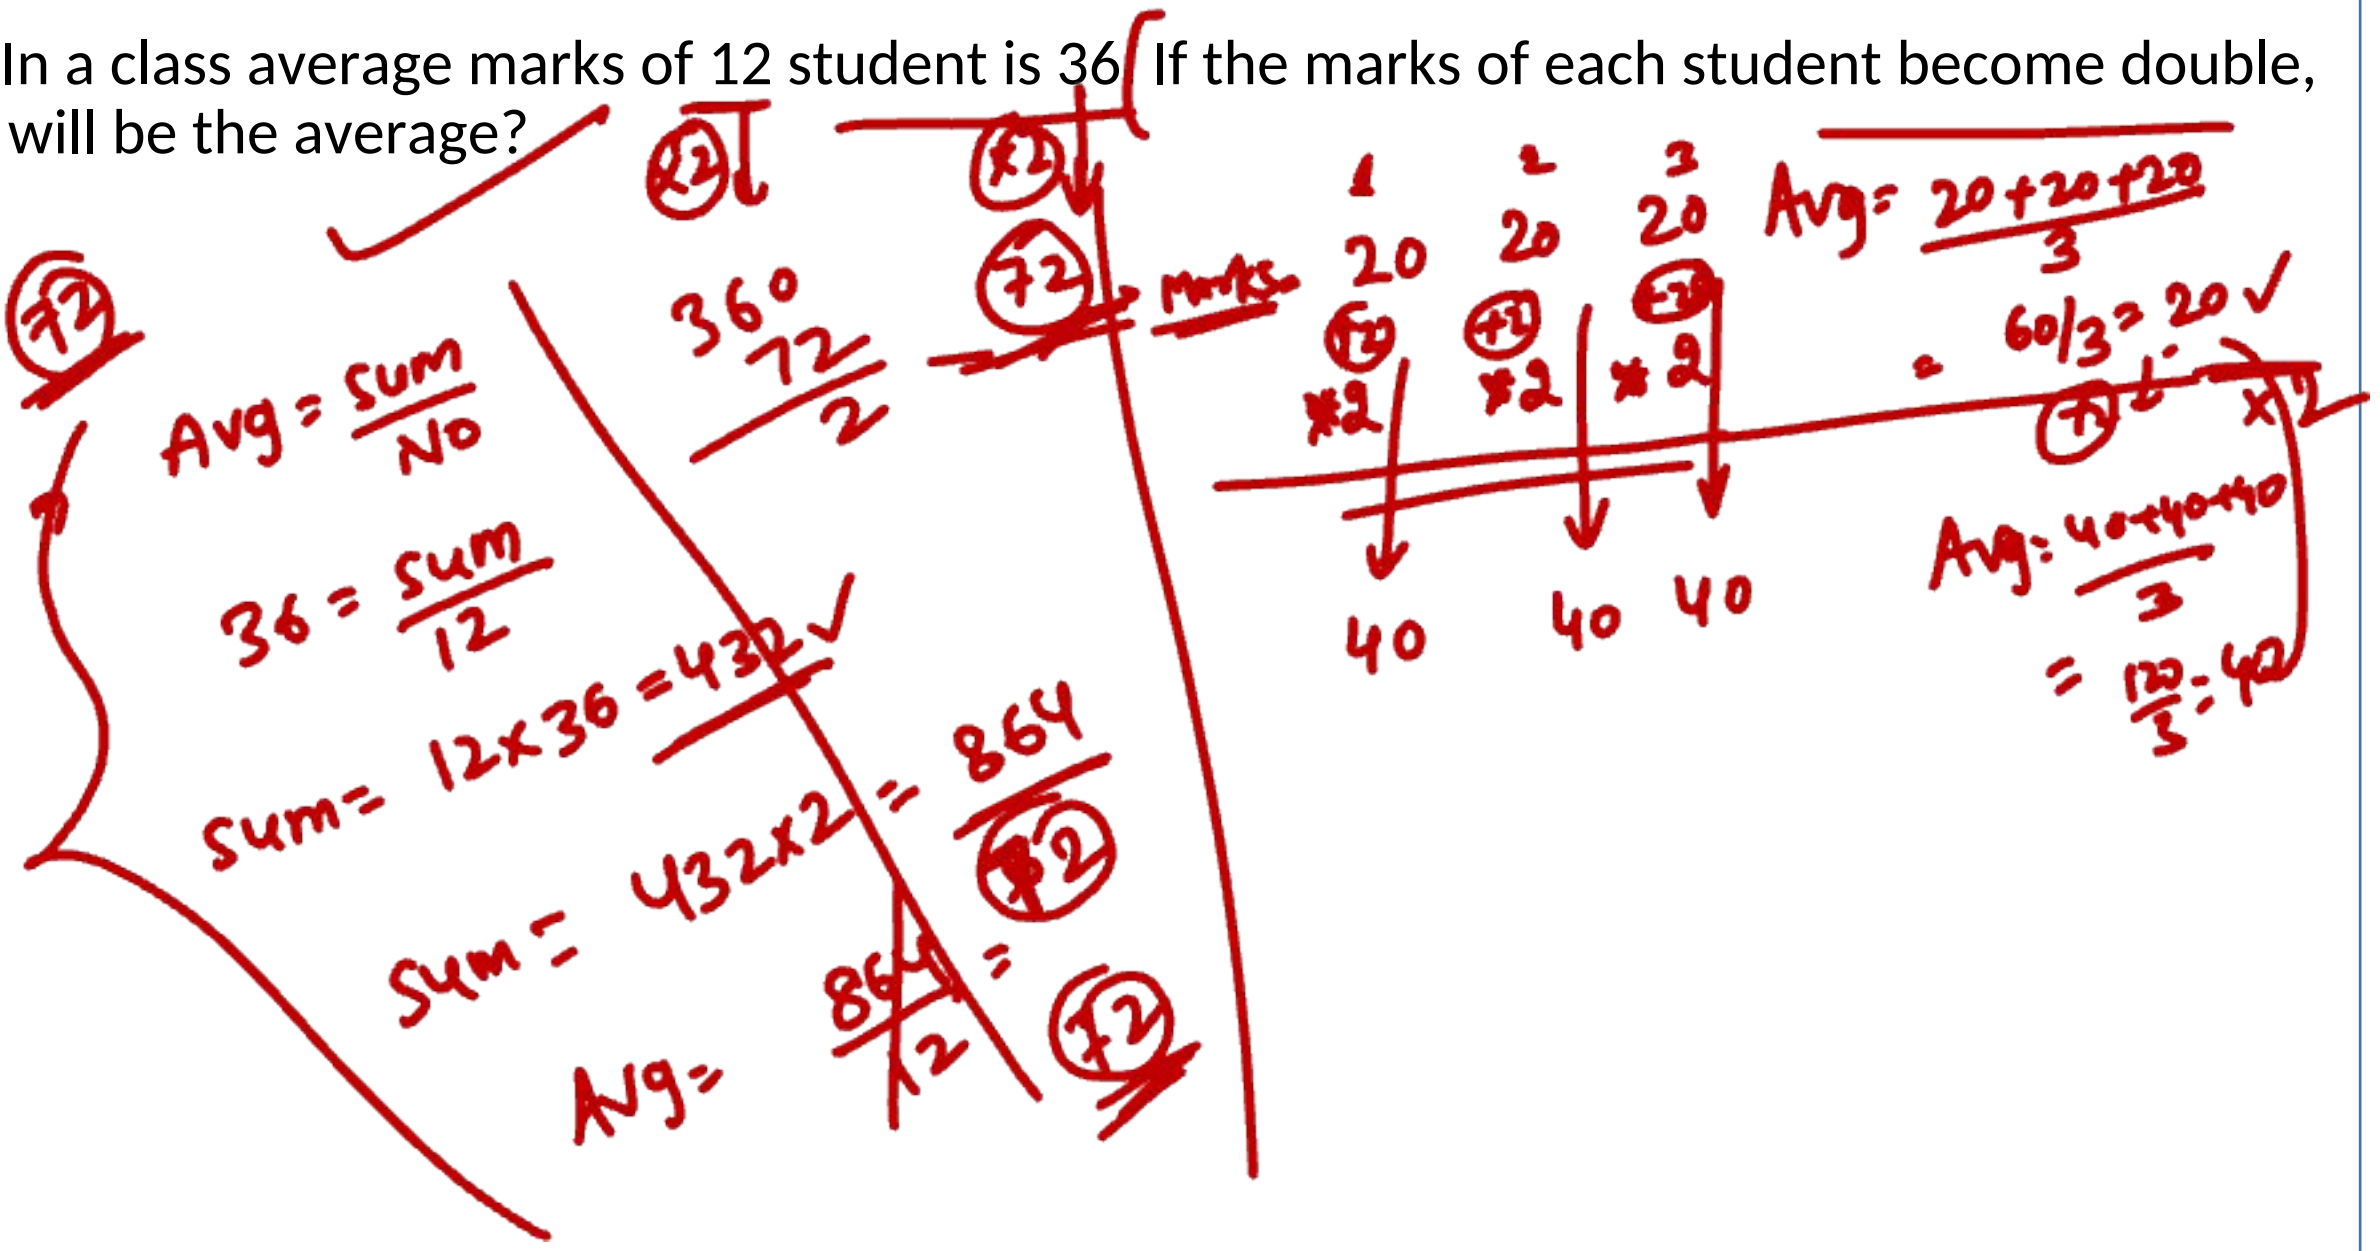

b) L=2M-3N

c) L = 3N- 2M

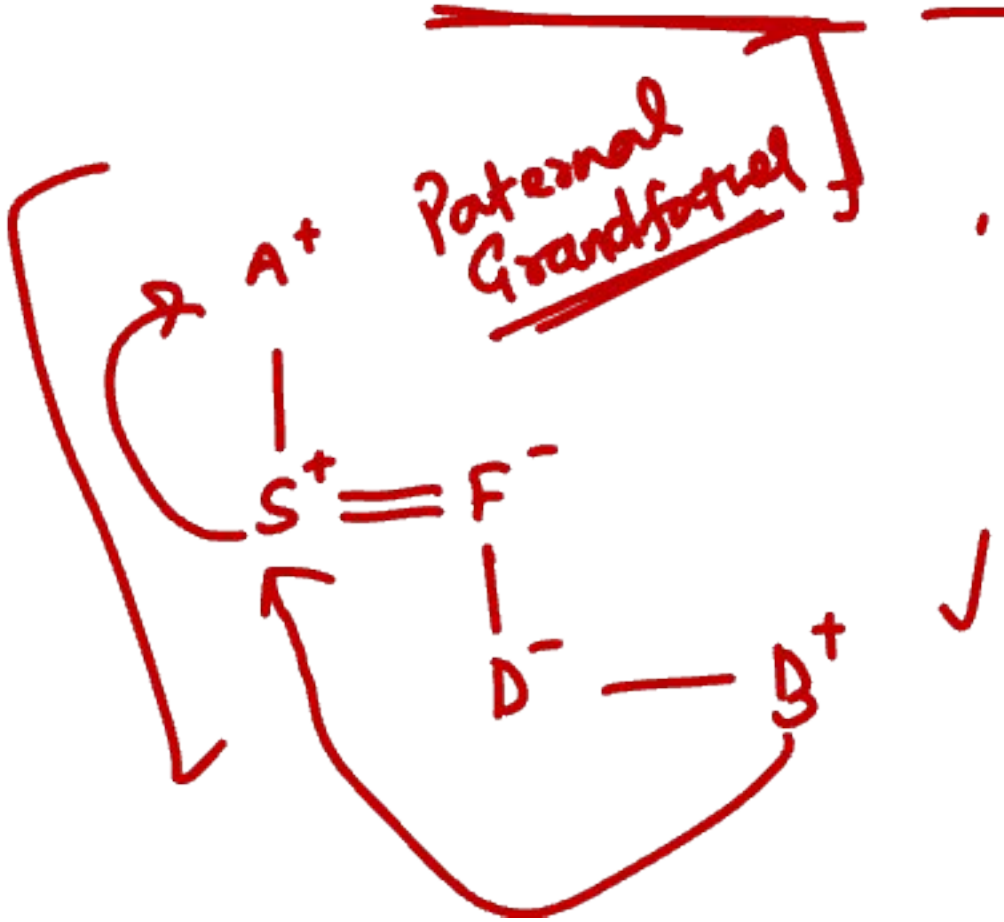

# TCS QUESTIONS ASKED IN 2025

Q10 In a class average marks of 12 student is 36 If the marks of each student become double, what will be the average?

# TCS QUESTIONS ASKED IN 2025

Q11. A is father of S, D is daughter of F, B is brother of D, S is husband of F. How A related to B?

# TCS QUESTIONS ASKED IN 2025

Q12. A rectangle have area of 154 $cm^2$. Its length is 4 times + 4 cm of breadth. What would be the quadratic equation of this??

$A = 154 cm^2$

$b = l$ cm

$l = 4x + 4$

$A = l \times b$

$154 = l \times (4l + 4)$

$154 = 4l^2 + 4l$

$7 \times 77 = 2(2l^2 + 2l)$

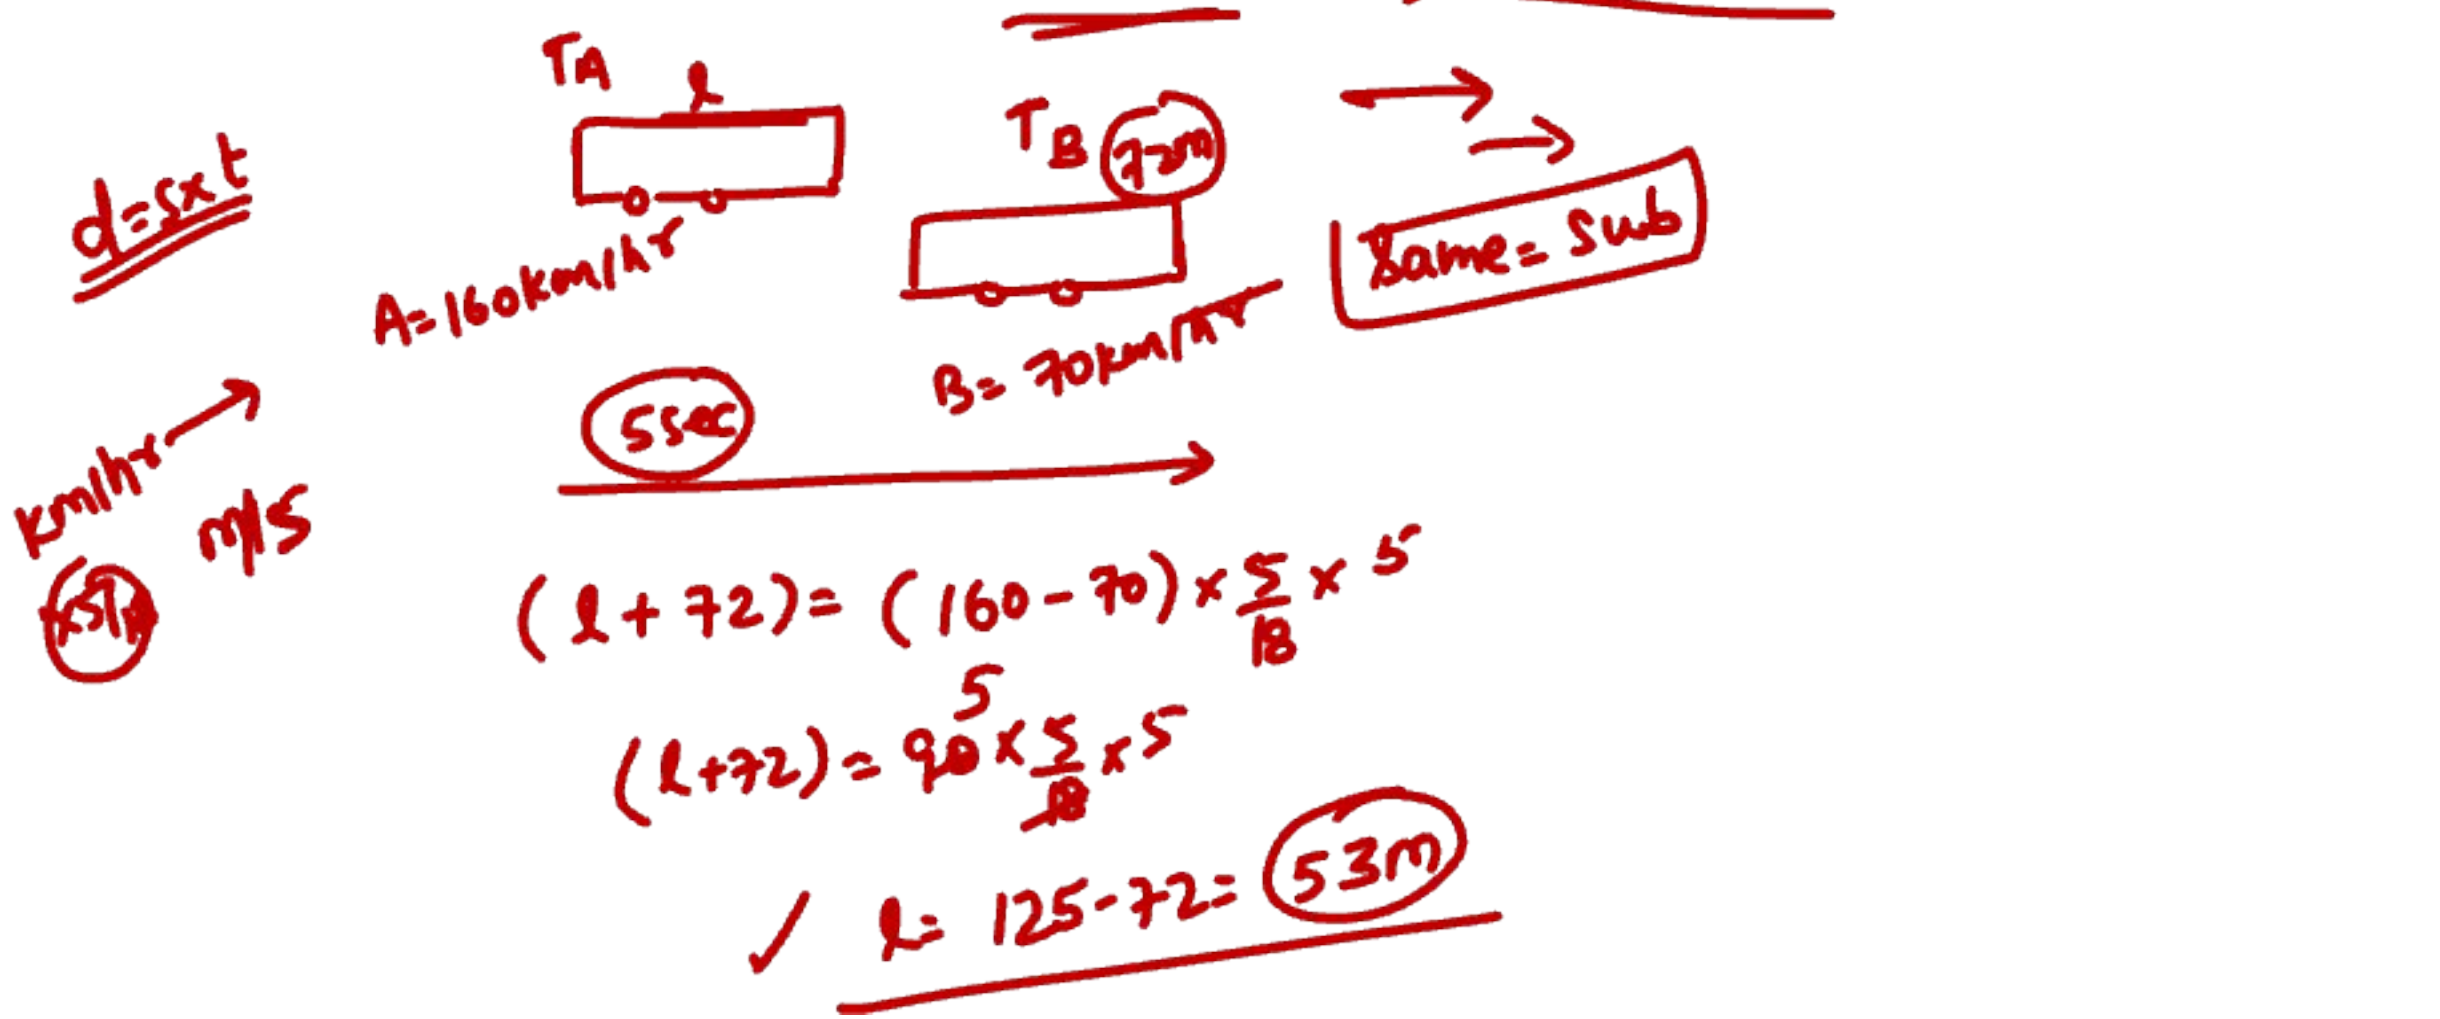

$2l^2 + 2l - 77 = 0$

$ax^2 + bx + c = 0$

Quadratic eqn

Q13. Two trains, A and B, are moving in the same direction on parallel tracks. The speed of train A is 160 kmph, and the speed of train B is 70 kmph. The length of train B is 72 meters. Train A completely overtakes train B in 5 seconds. Find the length of train A.

# TCS QUESTIONS ASKED IN 2025

Q14 . Product of two numbers is 6845. If the first number is 5 times the second number, find the sum of the numbers..

= first = x  y = (5y) = 185

= second (y) = 37

5 x 37

= 185

xy = 6845

y² = 1369

[y = 37]

37 + 185

= 222

222

Square

√1369

35² = 1225

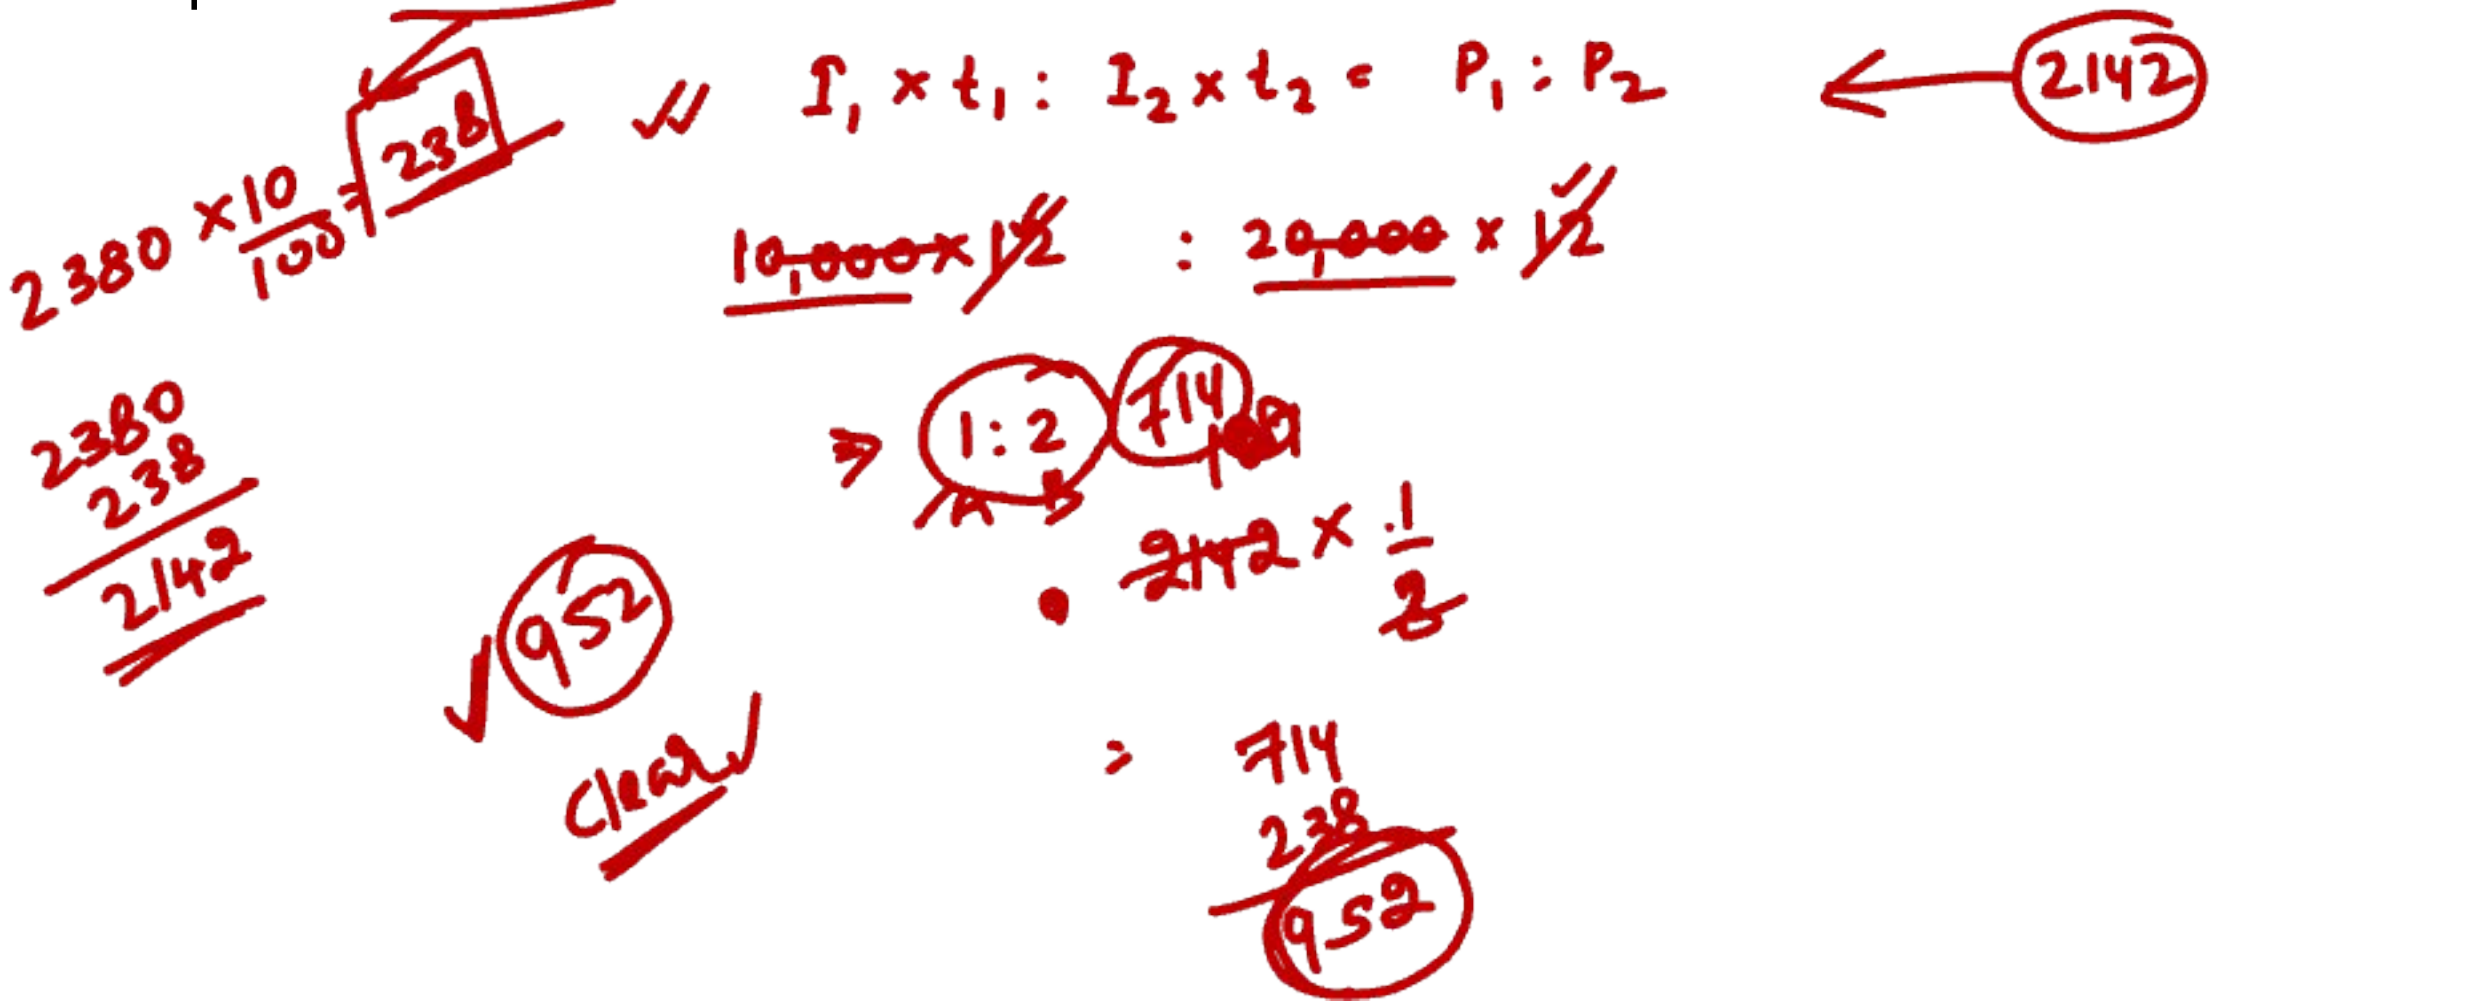

36² = -6

37² = (1)

46² = 1600

# TCS QUESTIONS ASKED IN 2025

Q15. A and B invest Rs 10,000 and Rs 20,000 in a business. A gets a royalty of 10%, and the rest of the profit is shared according to their investment. Find the profit earned by A if the net annual profit is Rs 2380?

# TCS QUESTIONS ASKED IN 2025

Q16. The average of 10 numbers is given as 40. However, one number was mistakenly recorded as 40 instead of 45. What will be the correct average after correcting the mistake?

$$\text{Avg} = \frac{\text{Sum}}{\text{No}}$$

$$40 = \frac{\text{Sum}}{10}$$

$$\text{Sum} = 40 \times 10 = 400$$

40 40 40 40 40 40 . . . (15)

$$\frac{\text{Sum}_{10} - 40 + 45}{10}$$

$$\frac{400 - 40 + 45}{10} = \frac{405}{10}$$

$$= 405$$
