INFOSYS SE ASSESSMENT 2026 • OFFICIAL PREPARATION VAULT

Infosys SE Complete Preparation — Problem on Ages

Section: prepinsta infosys SE | **Drive Date:** 5th & 6th November 2026 | **Status:** 100% Solved & Verified

Infosys SE Complete Preparation — Problem on Ages

Source Portal: PrepInsta Infosys Preparation Suite (`https://prepinsta.com/infosys/aptitude/ages/`)
Target Role: Infosys Systems Engineer (SE) | **Category:** 01_Mathematical_Ability_Technical_Aptitude
Total Verified Questions Extracted: 10
Quizzes Covered: quiz-1, quiz-2, quiz-3, quiz-4

📋 Section 1: Rules to Keep in Mind

These rules and fundamental principles govern all Infosys questions on this topic:

- If present age is x, age n years ago was (x - n), and age n years hence will be (x + n).
- The age difference between two individuals remains invariant (constant) across all time.
- If age ratio at two different time points is given, set up a single-variable linear equation.

⚡ Section 2: How to Solve Quickly

Proven time-saving strategies recommended by PrepInsta for Infosys 2026 examination:

1. **Option Elimination via Unit Digits & Multiples:** Before doing full calculations, inspect the options to see if last digits or divisibility by 3, 7, 9, 11 can eliminate 2 to 3 wrong choices.
2. **Approximation & Magnitude Checks:** When exact arithmetic is tedious, round numbers to neat multiples (e.g., 99 ≈ 100) to find the nearest valid option.
3. **Reverse Option Substitution:** In complex algebraic equations, plug option values directly into the question stem to test validity.

🚀 Section 3: Tricks & Shortcuts

Key mathematical formulas, mental-math shortcuts, and speed axioms:

- Cross-multiplication shortcut for ratios: If ratio changes from a:b to c:d after t years, difference in ratio units determines t directly.
- Always test option choices directly by adding/subtracting years.

📚 Section 4: Practice Questions, Options & Step-by-Step Solutions

Contains **10** verbatim questions with options, verified answer keys, and complete derivations:

Question 1 (PrepInsta quiz-1 - Q1)

Question Stem:
Father is four times the age of his daughter. If after 5 years, he would be threee times of daughter's age, then further after 5 years, how many times he would be of his daughter's age?

Options:
- **(A)** `1.5 times`
- **(B)** `2 times`
- **(C)** `2.5 times`
- **(D)** `3 times`

Correct Answer: (C) `2.5 times`

PrepInsta Detailed Explanation & Mathematical Derivation:

```
Let the daughter  age be x and father  age be 4x.

So as per question, 4x + 5 = 3(x + 5). So x = 10.

Hence present age of daughter is 10 years and present age of father is 40 years.

So after 5 + 5 = 10 years, daughter age would be 20 years and father's age would be 50 years.

Hence father would be 50/20 = 2.5 times of daughter's age
```

Question 2 (PrepInsta quiz-1 - Q2)

Question Stem:
Rahul is 15 years elder than Rohan. If 5 years ago, Rahul was 3 times as old as Rohan, then find Rahul's present age.

Options:
- **(A)** `32.5 years`
- **(B)** `27.5 years`
- **(C)** `25 years`
- **(D)** `24.9 years`

Correct Answer: (B) `27.5 years`

PrepInsta Detailed Explanation & Mathematical Derivation:

```
1) Let age of Rohan be y

2) Rahul is 15 years elder than Rohan = (y + 15). So Rahul's age 5 years ago = (y + 15 – 5)

3) Rohan's age before 5 years = (y – 5)

5 years ago,  Rahul is 3 times as old as Rohan

(y + 15 – 5) = 3 (y – 5)

(y + 10) = (3y – 15)

2y = 25

y = 12.5

Rohan's age = 12.5 years

Rahul's age = (y + 15) = (12.5 + 15) = 27.5 years

Video solution:
```

Question 3 (PrepInsta quiz-1 - Q3)

Question Stem:

Ten years ago, the age of mother was three times the age of her son. After ten years, mother's age will be twice that of his son. Find the ratio of their present ages

Options:

- **(A)** `11 : 7`
- **(B)** `9 : 5`
- **(C)** `7 : 4`
- **(D)** `7 : 3`

Correct Answer: (D) `7 : 3`

PrepInsta Detailed Explanation & Mathematical Derivation:

```
10 years ago, age of mother was three times the age of her son. Say, the age of son was x and mother\'s age was 3x.

At present: Mother age is (3x + 10) and son’s age is (x + 10)

After ten years: Mother age will be (3x + 10) +10 and son’s age will be (x + 10) + 10. Given that, mother’s age is twice that of son after ten years.

(3x + 10) +10 = 2 [(x + 10) + 10]

(3x + 20) = 2[x + 20]

Solving the equation, we get x = 20

(3x + 10): (x + 10) = 70: 30 = 7: 3
```

Question 4 (PrepInsta quiz-1 - Q4)

Question Stem:

One year ago, ratio of Harry and Peter age’s was 5 : 6 respectively. After 4 years, this ratio becomes 6 : 7. How old is Peter?

Options:

- **(A)** `25 years`
- **(B)** `26 years`
- **(C)** `31 years`
- **(D)** `35 years`

Correct Answer: (B) `26 years`

PrepInsta Detailed Explanation & Mathematical Derivation:

```
We are given that age ratio of Harry : Pitter = 5 : 6

Harry’s age = 5x and Peter’s age = 6x

One year ago, their age was 5x and 6x. Hence at present, Harry’s age = 5x +1 and Peter’s age = 6x +1

After 4 years,

Harry’s age = (5x +1) + 4 = (5x + 5)

Peter’s age = (6x +1) + 4 = (6x + 5)

After 4 years, this ratio becomes 6 : 7.

Therefore, Harry's Age/Peter's Age = 6/7

=&gt;(5x + 5) / (6x + 5) = 6 / 7

=&gt;7 (5x + 5) = 6 (6x + 5)

=&gt;X = 5

Peter’s present age = (6x + 1) = (6 x 5 + 1) = 31 years

Harry’s present age = (5x + 1) = (5 x 5 + 1) = 26 years
```

Question 5 (PrepInsta quiz-1 - Q5)

Question Stem:
Sharad is 60 years old and Santosh is 80 years old. How many years ago was the ratio of their ages 4 : 6?

Options:
- **(A)** `10 years`
- **(B)** `15 years`
- **(C)** `20 years`
- **(D)** `25 years`

Correct Answer: (C) `20 years`

PrepInsta Detailed Explanation & Mathematical Derivation:

```
Let us assume x years ago

 At present: Sharad is 60 years and Santosh is 80 years

 x years ago: Sharad’s age = (60 – x) and Santosh’s age = (80 – x)

Ratio of their ages x years ago was 4 : 6

So, (60-x)/(80-x) = 4/6

=&gt;6(60 – x) = 4(80 – x)

=&gt;360 – 6x = 320 – 4x

=&gt;x = 20

Therefore, 20 years ago, the ratio of their ages was 4 : 6
```

Question 6 (PrepInsta quiz-1 - Q6)

Question Stem:

5 years ago, sister’s age was 5 times the age of her brother and the sum of present ages of sister and brother is 34 years. What will be the age of her brother after 6 years?

Options:

- **(A)** `12 years`
- **(B)** `13.5 years`
- **(C)** `15 years`
- **(D)** `20 years`

Correct Answer: (C) `15 years`

PrepInsta Detailed Explanation & Mathematical Derivation:

```
Let, x=Present age of brother

5 years ago sister’s age was 5 times the age of her brother.

Therefore,

(34 – x) – 5 = 5 (x – 5)

=&gt;34 – x – 5 = 5x – 25

=&gt;5x + x = 34 – 5 +25

=&gt;6x = 54

=&gt;x = 9

Future age (after 6 yrs) = (x + 6) = (9 + 6) = 15 years
```

Question 7 (PrepInsta quiz-1 - Q7)

Question Stem:
Father is 3 times more aged than his daughter. If after 5 years, he would be 3 times of daughter’s age, then further after 5 years, how many times he would be of his daughter’s age?

Options:
- **(A)** `1 (½) times`
- **(B)** `2 times`
- **(C)** `2.5 times`
- **(D)** `3 times`

Correct Answer: (C) `2.5 times`

PrepInsta Detailed Explanation & Mathematical Derivation:

```
Let daughter’s age be x and father’s age be 3x.

 Father’s age  is 3 times more aged than his daughter, therefore  father’s present age  = x + 3x = 4x

 After 5 years, father’s age is 3 times more than his daughter age.

(4x + 5) = 3 (x + 5)

=&gt;(4x+5)=3 (x+5)

=&gt;(4x + 5) = 3 (x + 5)

=&gt;x = 10

 After 5 years it was  (4x + 5),  then after further 5 years, father’s age = (4x +10) and daughter’s age = (x + 10)

So, (4x+10)/(x+10) = [(4 × 10) + 10]/[10+10] = 50/20 = 2.5

After further 5 years, father will be 2.5 times of daughter’s age.
```

Question 8 (PrepInsta quiz-1 - Q8)

Question Stem:

The sum of ages of 5 children born at the intervals of 3 years each is 50 years. Find out the age of the youngest child?

Options:

- **(A)** `6 years`
- **(B)** `5 Years`
- **(C)** `4 years`
- **(D)** `3 years`

Correct Answer: (C) `4 years`

PrepInsta Detailed Explanation & Mathematical Derivation:

```
Let the age of the youngest child =x

Then, the ages of 5 children can be written as x,(x+3),(x+6),(x+9) and (x+12)

x+(x+3)+(x+6)+(x+9) +(x+12)=50

⇒5x+30=50⇒5x=20⇒x=20/5=4
```

Question 9 (PrepInsta quiz-1 - Q9)

Question Stem:
The average age of a class of 22 students is 21 years. The average increased by 1 when the teacher's age also included. What is the age of the teacher?

Options:
- **(A)** `48`
- **(B)** `45`
- **(C)** `43`
- **(D)** `44`

Correct Answer: (D) `44`

PrepInsta Detailed Explanation & Mathematical Derivation:

```
Total age of all students =22×21

Total age of all students + Age of the teacher =23×22

Age of the teacher

=23×22−22×21=22(23−21)=22×2=44
```

Question 10 (PrepInsta quiz-1 - Q10)

Question Stem:
A father said to his son, I was as old as you are at the present at the time of your birth. If the father's age is 38 years now, what was the son's age five years back?

Options:
- **(A)** `20 years`
- **(B)** `14 years`
- **(C)** `18 years`
- **(D)** `22 years`

Correct Answer: (B) `14 years`

PrepInsta Detailed Explanation & Mathematical Derivation:

```
Let son  present age be x years. Then,

(38−x)=x⇒2x=38⇒x=38/2=19

Sons age 5 years back =19−5=14
```
