INFOSYS SE ASSESSMENT 2026 • OFFICIAL PREPARATION VAULT

Infosys SE Complete Preparation — Data Sufficiency Principles

Section: prepinsta infosys SE | **Drive Date:** 5th & 6th November 2026 | **Status:** 100% Solved & Verified

Infosys SE Complete Preparation — Data Sufficiency Principles

Source Portal: PrepInsta Infosys Preparation Suite (`https://prepinsta.com/infosys/logical/data-sufficiency/`)
Target Role: Infosys Systems Engineer (SE) | **Category:** 02_Logical_Reasoning_Ability
Total Verified Questions Extracted: 10
Quizzes Covered: quiz-1, quiz-2, quiz-3, quiz-4, quiz-5

📋 Section 1: Rules to Keep in Mind

These rules and fundamental principles govern all Infosys questions on this topic:

- Evaluate Statement 1 ALONE first: Does it give a unique, definitive answer?
- Evaluate Statement 2 ALONE independently: Does it give a unique, definitive answer?
- Combine Statements 1 & 2 ONLY if neither alone is sufficient.
- Never assume information not explicitly stated in the problem statement or statements.
- Number Series - Coding and Number Series - Letter and Symbol Series - Logical Sequence of Words - Analogy and Classification Pattern - Statements and Conclusions - Statements and Assumptions - Data Sufficiency - Visual Reasoning - Cube and Cuboid

⚡ Section 2: How to Solve Quickly

Proven time-saving strategies recommended by PrepInsta for Infosys 2026 examination:

1. **Option Elimination via Unit Digits & Multiples:** Before doing full calculations, inspect the options to see if last digits or divisibility by 3, 7, 9, 11 can eliminate 2 to 3 wrong choices.
2. **Approximation & Magnitude Checks:** When exact arithmetic is tedious, round numbers to neat multiples (e.g., 99 ≈ 100) to find the nearest valid option.
3. **Reverse Option Substitution:** In complex algebraic equations, plug option values directly into the question stem to test validity.

🚀 Section 3: Tricks & Shortcuts

Key mathematical formulas, mental-math shortcuts, and speed axioms:

- You do NOT need to calculate the actual numerical value; you only need to prove whether a unique value CAN be calculated.
- If a statement produces two conflicting answers (e.g., x = 3 or -3), it is NOT sufficient.
- Number Series - Coding and Number Series - Letter and Symbol Series - Logical Sequence of Words - Analogy and Classification Pattern - Statements and Conclusions - Statements and Assumptions - Data Sufficiency - Visual Reasoning - Cube and Cuboid

📑 Section 4: Practice Questions, Options & Step-by-Step Solutions

Contains **10** verbatim questions with options, verified answer keys, and complete derivations:

Question 1 (PrepInsta quiz-1 - Q1)

Question Stem:
Directions: For Q1 to Q10

Use the following answer choices for the questions below.

A. Statement 1 alone is sufficient but statement 2 alone is not sufficient to answer the question

B. Statement 2 alone is sufficient but statement 1 alone is not sufficient to answer the question

C. Both statements 1 and 2 together are sufficient to answer the question but neither statement is sufficient

D. Each statement alone is sufficient to answer the

E. Statements 1 and 2 are not sufficient to answer the question asked and additional data is needed to answer the statements

Is the product of x and y greater than 60?

```
The sum of  x  and  y  is greater than 60.

Each of the variables is greater than 2.
```

Options:
- **(A)** `A`
- **(B)** `B`
- **(C)** `C`
- **(D)** `D`
- **(E)** `E`

Correct Answer: (C) `C`

PrepInsta Detailed Explanation & Mathematical Derivation:

```
(1)---&gt;

let x=3 and y=75

then, x+y= 78 and xy&gt; 60

again if x=-3 and y=75

then, x+y=72 but xy&lt;60

hence, (1) is insufficient.

(2)---&gt;

let x= 3 and y=4

then xy&lt;60

but if x=30 and y=4

then xy&gt;60

hence, (2) is insufficient.

Let us combine (1) and (2).

the least value that any of the two integers can have is 3, in which case the other integer must be at least 58. hence the product will always be more than 60.

So, answer is (C).
```

Question 2 (PrepInsta quiz-1 - Q2)

Question Stem:

What is the value of y ?

1. y - 3 = 2
2. y^{2} = 25

Options:
- **(A)** `4`
- **(B)** `5`
- **(C)** `3`
- **(D)** `2`
- **(E)** `1`

Correct Answer: (B) `5`

PrepInsta Detailed Explanation & Mathematical Derivation:

```
Explanation:

since y - 3 = 2,

from 1st we get y = 5 and

since 2nd statement y^{2} = 25

∴ we get y = 5

both the statement are alone sufficient
```

Question 3 (PrepInsta quiz-1 - Q3)

Question Stem:
What was the percent increase of Company A's stock between June 1 and June 30, 2000?

1. The stock gained $5 in value during June
2. The stock rose 12% during the first half of the month.

Options:
- **(A)** `A`
- **(B)** `B`
- **(C)** `C`
- **(D)** `D`
- **(E)** `E`

Correct Answer: (E) `E`

PrepInsta Detailed Explanation & Mathematical Derivation:

```
Explanation:

Since the actual value of the stock before the stock gained the value in the month of June is not
known. So, we need some additional data
```

Question 4 (PrepInsta quiz-1 - Q4)

Question Stem:
Is x a prime number?

1. x is an even
2. x can not be divided evenly by an odd number other than 1.

Options:
- **(A)** `Only 1 follows`
- **(B)** `Only 2 follows`
- **(C)** `Both the statements are correct`
- **(D)** `Statement 2 follows 1`
- **(E)** `Both the statements are not sufficient`

Correct Answer: (E) `Both the statements are not sufficient`

PrepInsta Detailed Explanation & Mathematical Derivation:

```
(1) x is an even number. If x=2 then the answer is YES but if x is any other even number then the answer is NO. Not sufficient.

(2) x can not be divided evenly by an odd number other than 1. This statement implies that x is some power of 2: 2, 4, 8, 16, ... Not sufficient.

(1)+(2) Still not sufficient.
```

Question 5 (PrepInsta quiz-1 - Q5)

Question Stem:
If the average size of 3 accounts is `1 million, is the smallest account less than` 500,000?

1. The largest account is $1.3
2. One of the accounts is $0.7 million.

Options:
- **(A)** `A`
- **(B)** `B`
- **(C)** `C`
- **(D)** `D`
- **(E)** `E`

Correct Answer: (C) `C`

PrepInsta Detailed Explanation & Mathematical Derivation:

Explanation:

Given that a+b+c = 3,000,000

let a be the smallest account and c be the largest (a<=b<=c),

Is a<500,000

Statement (1) says that the largest is 1,300,000

so now a+b = 1,700,000

There is a possibility for a=b=c (or) a=b (or) b=c, but the largest is 1.3 million so a=b=c can't happen.

However a=b or b=c can happen. This is one choice. But lets say a!=b and b!=c (all three are different)

a+b = 1,700,000

a = 499,000

b=1,201,000

a=501,000

b=1,199,000

we get values for a on either side of 500,000. Hence Statement (1) is not sufficient

Statement (2) says that one of the accounts is $0.7 million.

a+b+c = 3,000,000

lets say b = 0.7 million

a+c=2,300,000

```
Again we get values of a on either side of 500,000. Hence Statement (2) is not sufficient

Lets combine both

The greatest is 1.3 million and the other one is 0.7 million

which leaves the 1 million for the third account. Hence we can conclusively say that the smallest account is not less than 500,000.
```

Question 6 (PrepInsta quiz-1 - Q6)

Question Stem:

Is X a prime number, given that X is a positive integer?

1. X^4 > 3000

2.X^4 < 10,000

Options:

- **(A)** `A`
- **(B)** `B`
- **(C)** `C`
- **(D)** `D`
- **(E)** `E`

Correct Answer: (C) `C`

PrepInsta Detailed Explanation & Mathematical Derivation:

```
Explanation:

From statement A we know that X4 is greater than 3000. There are infinite values for X possible for which X4 is greater than 3000

From statement B we know that X4 is less than 10,000. This one is a lot better. There are only 9 integer values that satisfy this condition. But this still does not give us a unique answer.

Combining the two statements, we know that 2000 &lt; X4 &lt; 10000. The following values of X satisfy this condition -&gt; 8 and 9. Both 8 and 9 are not prime. Hence, the question can be answered conclusively using the two statements. Hence answer choice (C)
```

Question 7 (PrepInsta quiz-1 - Q7)

Question Stem:

What is the value of X, if X and Y are two distinct integers and their product is 30?

1. X is an odd integer

2. X > Y

Options:

- **(A)** `A`
- **(B)** `B`
- **(C)** `C`
- **(D)** `D`
- **(E)** `E`

Correct Answer: (E) `E`

PrepInsta Detailed Explanation & Mathematical Derivation:

```
From the question, we know that both X and Y are distinct integers and their product is 30.

Explanation:

30 can be obtained as a product of two distinct integers in the following manner

    1 * 30          (-1) * (-30)

    2 * 15          (-2) * (-15)

    3 * 10          (-3) * (-10)

    5 * 6           (-5) * (-6)

Statement I: From this statement, we know that the value of X is odd. Therefore, X can be one of
the following values: 1, -1, 3, -3, 5, -5. So, using the information in statement I we will not be
able to conclusively decide the value of X. Hence, statement I alone is not sufficient to answer
the question.

Statement II: From this statement, we know that the value of X &gt; Y. From the given
combinations, X can take more than one value. Hence, using the information in statement II, we
will not be able to find the value of X.

Combining the two statements, we know that X is odd and that the value of X &gt; Y.

The combinations that satisfy both the conditions include X taking the value of -1, -3 and -5.

As the information provided in the two statements independently or together are not sufficient to
answer the question, the answer choice is (5).
```

Question 8 (PrepInsta quiz-1 - Q8)

Question Stem:
Is m divisible by 6?

1. m is divisible by 3
2. m is divisible by 4

Options:
- **(A)** `A`
- **(B)** `B`
- **(C)** `C`
- **(D)** `D`
- **(E)** `E`

Correct Answer: (C) `C`

PrepInsta Detailed Explanation & Mathematical Derivation:

```
Note: in order to divide a number by 6 , that number has to be divisible by both 2 and 3.

Statement 1: m is divisible by 3. No information regarding 2. NOT sufficient.

Statement 2: m is divisible by 4. it means that m is divisible by 2. NO information regarding 3.
NOT sufficient.

Combining both statements :

Yes. this what we are looking for . A number is divisible by 6 if it is divisible by both 2 and 3.

The best answer is C.
```

Question 9 (PrepInsta quiz-1 - Q9)

Question Stem:
A, B, C, D have to stand in a queue in descending order of their heights. Who stands first?

1. D was not the last, A was not the
2. The first is not C and B was not the tallest.

Options:
- **(A)** `A`
- **(B)** `B`
- **(C)** `C`

- **(D)** `D`
- **(E)** `E`

Correct Answer: (C) `C`

PrepInsta Detailed Explanation & Mathematical Derivation:

```
Explanation:

D because A is not first neither C and B is not the tallest person. The only person will be first is D .
```

Question 10 (PrepInsta quiz-1 - Q10)

Question Stem:
What are the speeds two trains travels with 80 yards and 85 yards long respectively? (Assume that former is faster than later)

1. they take 75 seconds to pass each other in opposite direction.
2. they take 5 seconds to pass each other in same direction

Options:
- **(A)** `A`
- **(B)** `B`
- **(C)** `C`
- **(D)** `D`
- **(E)** `E`

Correct Answer: (C) `C`

PrepInsta Detailed Explanation & Mathematical Derivation:

```
Explanation:

let the speeds be x and y

when moves in same direction the relative speed, x-y = 85-80/37.5 = 0.13 .....(l)

when moves in opposite direction the relative speed, x+y = 165/75 = 2.2...(ll)

now, equation l + equation ll gives, 2x = 0.13+2.2 = 2.33 =&gt; x=1.165

from equation l, x-y=0.13 =&gt; y = 1.165-0.13 = 1.035

therefore the speeds are 1.165 yards/sec and 1.035 yards/sec.
```
