Question No. 58

func main() { yourSlice := make([]string, 0) if yourSlice != nil { fmt.Println("yourSlice is not empty!") } }
Which of the following is the correct statement for above program.

- 'yourSlice' is not a nil slice, as we've allocated an array, eventhough the length and capacity is 0.
- 'yourSlice' is a nil slice, with the length and capacity is 0.
- 'yourSlice' is a nil slice, as we've allocated an array with the only length is 0.
- 'yourSlice' is not a nil slice, as we've allocated an array, with only capacity is 0.

Question No. 49

How does a function with an uppercase first letter (Contains) differ from one with a lower-case first letter (contains)?

- Lower case functions can be used to create a function type value.
- Lowercase indicates functions that can only be used by the package they are declared in,whereas capitalized functions are exported for use anywhere.
- Lower case function is static function.
- There is no diffrence in this. Both are same.

Question 15

Direction: The question below consists of a question and two statements numbered I and II given. You have to decide whether the data provided in which of the statements are sufficient to answer the question. Choose your answer from the options based on this. Three boxes X, Y and Z are placed on a floor. Is X heavier than Y? I. The weight of X is half of the sum of the weights of the other two boxes. II. The weight of Y is half of the sum of the weights of the other two boxes. (Choose one solution)

...@gmail.com, please provide your response below

- The data in statement I alone is sufficient to answer the question while the data in statement II alone is not sufficient to answer the question.
- The data in statement II alone is sufficient to answer the question while the data in statement I alone is not sufficient to answer the question.
- The data either in statement I alone or in statement II alone is sufficient to answer the question.
- The data in both statements I and II together is necessary to answer the question.
