Question Text:
Statements: All engineers are coders. Some coders are testers. No tester is a manager.
Conclusions: I. Some coders are not managers. II. Some engineers are testers. III. No engineer is a manager.

Options:

- **(A)** Only I follows
- **(B)** I and II follow
- **(C)** I and III follow
- **(D)** All follow

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (A)** — `Only I follows`

Detailed Step-by-Step Solution & Logical Derivation:

Statement I: All engineers are coders, Some coders are testers, No tester is a manager. The subset of coders who are testers cannot be managers; hence 'Some coders are not managers' follows definitively. II (Some engineers are testers) does not necessarily follow as the circle of engineers may not overlap with testers. III (No engineer is a manager) does not necessarily follow. Thus, only conclusion I follows.

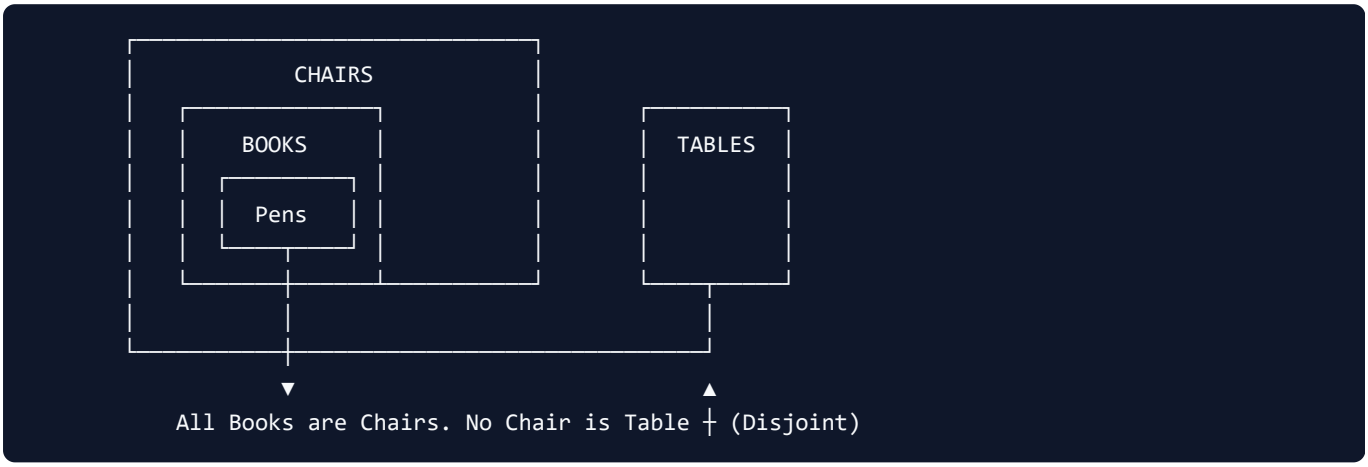

Question 2: Infosys SE Question 2 🔴 `[🔥 MUST-SOLVE | INFOSYS SE ACTUAL PATTERN]`

- **(B)** I, II and III only
- **(C)** II, III and IV only
- **(D)** All follow

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (B)** — `I, II and III only`

Detailed Step-by-Step Solution & Logical Derivation:
Statements: Some pens are books. All books are chairs. No chair is a table.
- Conclusion I: Some pens are chairs. Since some pens are books and all books are chairs, pens overlapping books must also overlap chairs. (Follows)
- Conclusion II: No book is a table. Since all books are inside chairs and no chair is a table, books cannot overlap tables. (Follows)
- Conclusion III: Some pens are not tables. The pens that are chairs cannot be tables. (Follows)
- Conclusion IV: Some tables are pens. No positive overlap between tables and pens is guaranteed. (Does not follow)
Therefore, I, II and III only follow.

Question Text:
Data Sufficiency. For integers x and y, is x > y?

I. $x^2 > y^2$. II. $x + y > 0$.

Options:
- **(A)** I alone is sufficient
- **(B)** II alone is sufficient
- **(C)** Both together are sufficient, neither alone
- **(D)** Even both
together are not sufficient

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (C)** — `Both together are sufficient, neither alone`

Detailed Step-by-Step Solution & Logical Derivation:
Question: Is x > y for integers x and y?
- Statement I: $x^2 > y^2$ gives $|x| > |y|$. If x = -3, y = 2, $x^2 = 9 > 4$ but x < y. If x = 3, y = 2, x > y. Insufficient.
- Statement II: x + y > 0 gives x > -y. If x = -1, y = 3, x < y. If x = 3, y = -1, x > y. Insufficient.
- Both together: $x^2 > y^2$ => $x^2 - y^2 > 0$ => (x - y)(x + y) > 0. Since Statement II guarantees (x + y) > 0, we can safely divide both sides by (x + y) without changing the inequality sign, yielding (x - y) > 0, which means x > y! Definite YES. Both together are sufficient, neither alone.

Question 4: Infosys SE Question 4 🔴 [🔥 `MUST-SOLVE | INFOSYS SE ACTUAL PATTERN`]

Question Text:
Data Sufficiency. What is Riya's present age?
I. Riya is twice as old as her sister, who is 3 years younger than their brother.
II. Five years hence, the sum of the ages of Riya and her sister will be 40.

Options:
- **(A)** I alone is sufficient
- **(B)** II alone is sufficient
- **(C)** Both together are sufficient, neither alone
- **(D)** Even both
together are not sufficient

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (C)** — `Both together are sufficient, neither alone`

Detailed Step-by-Step Solution & Logical Derivation:
Question: What is Riya's present age?
- Statement I: R = 2S, S = B - 3. Three unknowns, two equations. Insufficient.
- Statement II: (R + 5) + (S + 5) = 40 => R + S = 30. Two unknowns, one equation. Insufficient.
- Both together: Substitute R = 2S into R + S = 30 => 2S + S = 30 => 3S = 30 => S = 10. Thus R = 20 years. Riya's present age is uniquely determined as 20. Both statements together are sufficient, neither alone.

Question Text:
In a certain code, MONDAY is written as NNOCBX. How is SUNDAY written in that code?

Options:
- **(A)** TTOCBX
- **(B)** TVOEBZ
- **(C)** TTOCBZ
- **(D)** RTOCBX

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (A)** — TTOCBX

Detailed Step-by-Step Solution & Logical Derivation:
Coding Pattern: M (+1) -> N, O (-1) -> N, N (+1) -> O, D (-1) -> C, A (+1) -> B, Y (-1) -> X. The alternating shift pattern is [+1, -1, +1, -1, +1, -1].
Applying to SUNDAY:
- S (+1) -> T
- U (-1) -> T
- N (+1) -> O
- D (-1) -> C
- A (+1) -> B
- Y (-1) -> X
Result: TTOCBX.

Question Text:
In a code, "sun rises early" = "ka mo ti", "early bird catches" = "ti ra po", and "bird sun light" = "ra ka du". What is the code for "rises bird light"?

Options:
- **(A)** mo ra du
- **(B)** mo po du
- **(C)** ka ra du
- **(D)** mo ti du

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (A)** — `mo ra du`

Detailed Step-by-Step Solution & Logical Derivation:
Word-code comparison:
1) 'sun rises early' = 'ka mo ti'
2) 'early bird catches' = 'ti ra po' => Common word 'early' = 'ti'.
3) 'bird sun light' = 'ra ka du' => Compare (1) & (3): common word 'sun' = 'ka'.
From (1), remaining word 'rises' = 'mo'.
Compare (2) & (3): common word 'bird' = 'ra'.
From (3), remaining word 'light' = 'du'.
Target: 'rises bird light' = 'mo ra du'.

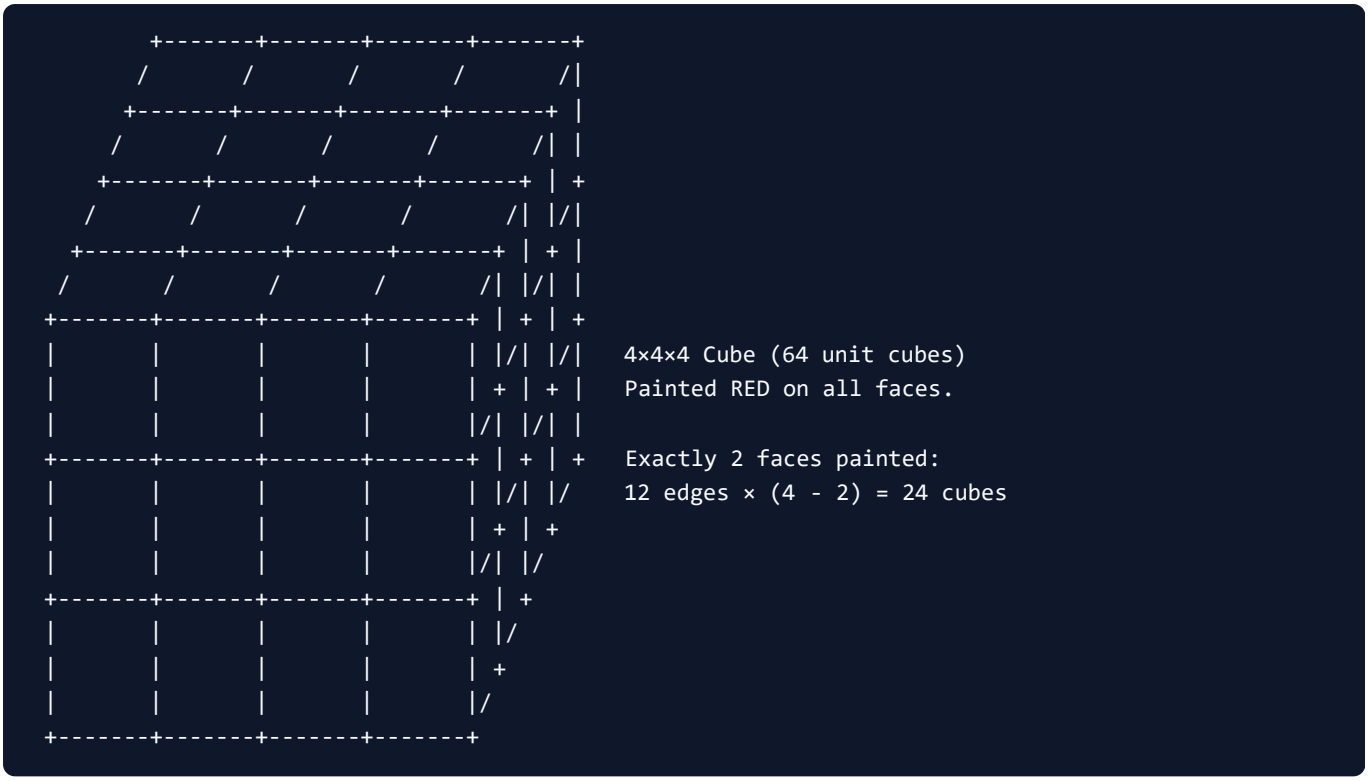

Question 7: Infosys SE Question 7 🔴 `[🔥 MUST-SOLVE | INFOSYS SE ACTUAL PATTERN]`

Visual Schematic / Logical Deduction Diagram:

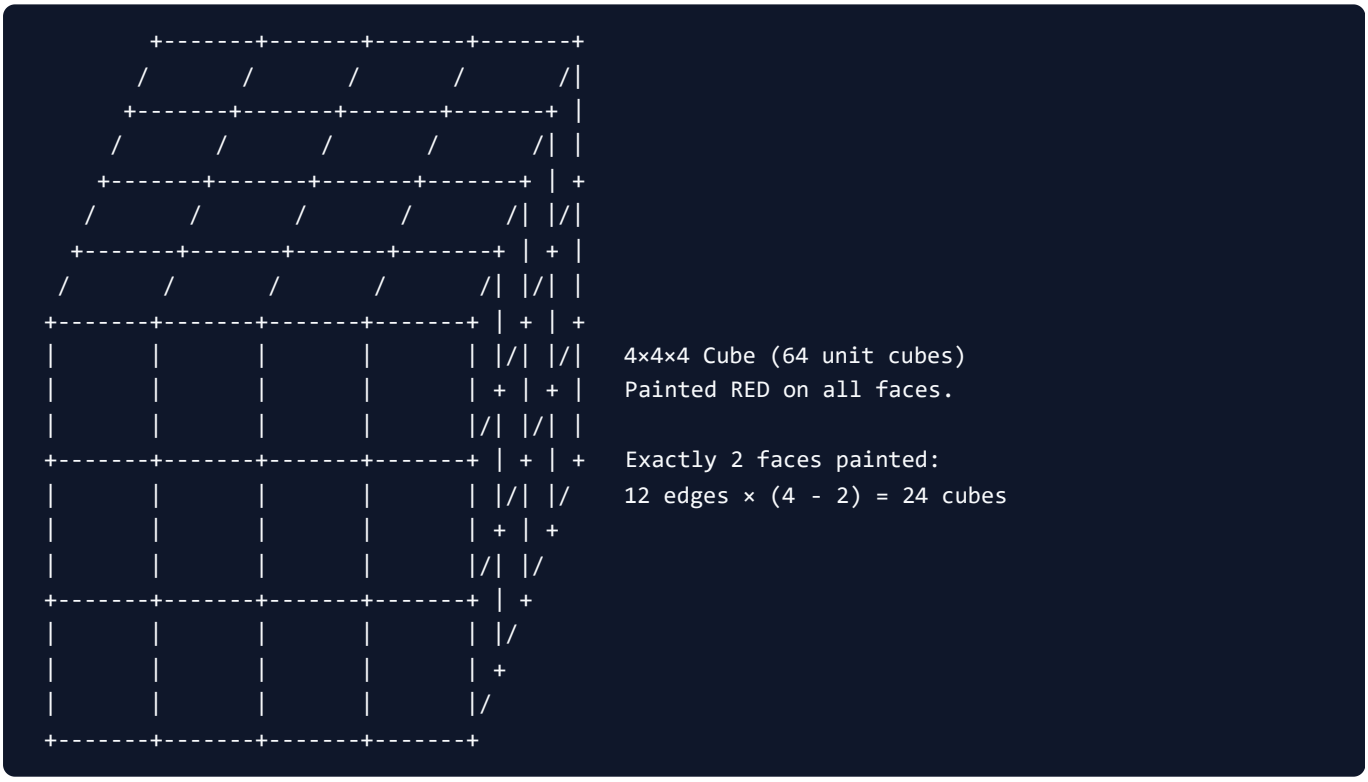

Visual Schematic / Logical Deduction Diagram:

Options:

- **(A)** 12
- **(B)** 24
- **(C)** 36
- **(D)** 8

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (B)** — 24

Detailed Step-by-Step Solution & Logical Derivation:
For an n × n × n painted cube cut into unit cubes (here n = 4 since $4^3 = 64$):
Cubes with exactly two faces painted lie along the 12 edges (excluding the 2 corner cubes on each edge):
Number = 12 × (n - 2) = 12 × (4 - 2) = 12 × 2 = 24.

- **(B)** 14
- **(C)** 16
- **(D)** 18

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (C)** — `16`

Detailed Step-by-Step Solution & Logical Derivation:
Standard median geometry counting:
In triangle ABC with medians AD, BE, CF intersecting at centroid G:
1) 6 small elementary triangles formed around centroid G: AFG, BFG, BDG, CDG, CEG, AEG.
2) 3 triangles formed by pairing two adjacent elementary triangles opposite vertices: ABG, BCG, CAG.
3) 6 triangles formed by combining three elementary triangles (split by each median into halves): ABD, ACD, BCE, ABE, CAF, CBF.
4) 1 whole outer triangle: ABC.
Total = 6 + 3 + 6 + 1 = 16 triangles.

"His mother is the only daughter of my mother."
=> Meera is the mother of the man.
```

Options:
- **(A)** Mother
- **(B)** Sister
- **(C)** Aunt
- **(D)** Grandmother

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (A)** — `Mother`

Detailed Step-by-Step Solution & Logical Derivation:
Meera said: 'His mother is the only daughter of my mother.'
The 'only daughter of my mother' when spoken by a woman (Meera) refers to Meera herself.
Therefore, 'His mother is Meera.'
Thus, Meera is the man's Mother.

Question Text:
If A + B means A is the mother of B, A − B means A is the brother of B, and A × B means A is the father of B, which expression shows that P is the maternal uncle of R?

Options:
- **(A)** P + Q − R
- **(B)** P − Q + R
- **(C)** P × Q − R
- **(D)** P − Q × R

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (B)** — `P - Q + R`

Detailed Step-by-Step Solution & Logical Derivation:
P must be the maternal uncle of R (brother of R's mother).
- Q + R means Q is the mother of R.
- P - Q means P is the brother of Q.
Combining them: P - Q + R means P is the brother of Q (who is the mother of R), so P is R's maternal uncle.

- **(B)** 9 m West
- **(C)** 11 m South-East
- **(D)** 5 m North

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (A)** — `9 m East`

Detailed Step-by-Step Solution & Logical Derivation:
Step-by-step vector tracking from origin (0, 0):
1) Walks 10 m North -> (0, 10)
2) Turns right (East) and walks 6 m -> (6, 10)
3) Turns right (South) and walks 14 m -> (6, 10 - 14) = (6, -4)
4) Turns left (East) and walks 3 m -> (6 + 3, -4) = (9, -4)
5) Turns left (North) and walks 4 m -> (9, -4 + 4) = (9, 0)
Final position is (9, 0), which is exactly 9 m East of the starting point.

Options:
- **(A)** North
- **(B)** South
- **(C)** South-West
- **(D)** East

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (B)** — `South`

Detailed Step-by-Step Solution & Logical Derivation:
Initial direction: North-East (45° clockwise from North).
1) +90° clockwise: 45° + 90° = 135° (South-East).
2) -135° anticlockwise: 135° - 135° = 0° (North).
3) +180° clockwise: 0° + 180° = 180° (South).
Final direction is South.

- **(B)** 153

- **(C)** 149
- **(D)** 158

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (B)** — `153`

Detailed Step-by-Step Solution & Logical Derivation:
Series: 3, 7, 16, 35, 74, ?
Pattern: ×2 + k where k increments by 1 at each step:
- 3 × 2 + 1 = 7
- 7 × 2 + 2 = 16
- 16 × 2 + 3 = 35
- 35 × 2 + 4 = 74
- Next term = 74 × 2 + 5 = 148 + 5 = 153.

- **(B)** 259
- **(C)** 361
- **(D)** 323

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (A)** — `289`

Detailed Step-by-Step Solution & Logical Derivation:
Series: 4, 9, 25, 49, 121, 169, ?
Notice the base numbers:
- $2^2 = 4$
- $3^2 = 9$
- $5^2 = 25$
- $7^2 = 49$

- $11^2 = 121$
- $13^2 = 169$

These are the squares of consecutive prime numbers (2, 3, 5, 7, 11, 13). The next prime number is 17.
Next term = $17^2 = 289$.

Options:
- **(A)** A
- **(B)** Z
- **(C)** B
- **(D)** Y

Correct Answer

> [!IMPORTANT]

Detailed Step-by-Step Solution & Logical Derivation:
Letter positions in alphabet: B(2), E(5), I(9), N(14), T(20), ?
Differences:
- 5 - 2 = +3
- 9 - 5 = +4
- 14 - 9 = +5
- 20 - 14 = +6

Next difference is +7: 20 + 7 = 27.
In circular alphabet (mod 26): 27 ≡ 1 = A.

Question Text:
Statements: All servers are machines. Some machines are laptops. No laptop is portable.
Conclusions: I. Some machines are not portable. II. Some servers are laptops. III. No server is portable.

Options:
- **(A)** Only I follows
- **(B)** I and III follow
- **(C)** I and II follow
- **(D)** None follows

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (A)** — `Only I follows`

Detailed Step-by-Step Solution & Logical Derivation:
Some machines are laptops, and no laptop is portable, so those machines are not portable — I follows.
Nothing links servers specifically to laptops or to portability, so II and III don't follow.

- **(B)** I only
- **(C)** I, II and III
- **(D)** II and III only

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (C)** — `I, II and III`

Detailed Step-by-Step Solution & Logical Derivation:

Circles
squares, and squares have no overlap with triangles, so circles have none either (I). Some
⊆
triangles are rectangles, and since no triangle is a square, those rectangles are not squares (II). Since no square is a triangle, it's also true that some squares are not triangles (III).

Question Text:
Data Sufficiency. Is the integer n divisible by 6?
I. n is divisible by 4. II. n is divisible by 9.

Options:
- **(A)** I alone is sufficient
- **(B)** II alone is sufficient
- **(C)** Both together are sufficient, neither alone
- **(D)** Even both
together are not sufficient

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (C)** — Both together are sufficient, neither alone

Detailed Step-by-Step Solution & Logical Derivation:
I alone fails (n = 4 is not divisible by 6). II alone fails (n = 9 is not divisible by 6). Together, a number divisible by both 4 and 9 is divisible by their LCM, 36, which is always divisible by 6.

Data Sufficiency. What is the cost price of an article?
I. It was sold at a profit of 20%. II. If sold at ₹150 more, the profit would have been 32%.

Options:
- **(A)** I alone is sufficient
- **(B)** II alone is sufficient
- **(C)** Both together are sufficient, neither alone

- **(D)** Even both
together are not sufficient

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (B)** — `II alone is sufficient`

Detailed Step-by-Step Solution & Logical Derivation:
II alone: 12% of CP = ₹150, so CP = ₹1,250 — sufficient. I alone gives only a percentage, not an absolute value.

Correct Answer

Question Text:
In a code, "data flows fast" = "zu ka mo", "fast network grows" = "ka ta ri", "network data secure" = "zu ta ve". What is the code for "grows secure data"?

Options:
- **(A)** ri ve zu
- **(B)** ta ve zu
- **(C)** ri ve ka
- **(D)** ka ve zu

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (A)** — `ri ve zu`

Detailed Step-by-Step Solution & Logical Derivation:
"fast" is common to statements 1 and 2 → ka. "data" is common to 1 and 3 → zu. "network" is common to 2 and 3 → ta. By elimination: flows = mo, grows = ri, secure = ve. So "grows secure data" = ri ve zu.

- **(B)** 36
- **(C)** 27
- **(D)** 24

Correct Answer

> [!IMPORTANT]

Detailed Step-by-Step Solution & Logical Derivation:
With 2 interior + 2 boundary lines in each direction, there are 4 vertical and 4 horizontal lines.
Rectangles = C(4,2) × C(4,2) = 6 × 6 = 36.

- **(B)** M + P ÷ N
- **(C)** M − P ÷ N
- **(D)** M ÷ P − N

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (A)** — `M ÷ P + N`

Detailed Step-by-Step Solution & Logical Derivation:
M ÷ P: M is daughter of P. P + N: P is son of N. So M is P's daughter, and P is N's son — M is N's granddaughter.

- **(D)** West

Correct Answer

> [!IMPORTANT]

Detailed Step-by-Step Solution & Logical Derivation:
Using bearings (clockwise from North): South = 180°. −45° (anticlockwise) = 135°; +90° (clockwise) = 225°; −225° (anticlockwise) = 0°, which is North.

- **(B)** I and IV follow
- **(C)** I, II and IV follow
- **(D)** All follow

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (B)** — `I and IV follow`

Detailed Step-by-Step Solution & Logical Derivation:
Since P⊆Q⊆R, "All P are R" (I) follows directly. Some R are S, and no S is T, so those particular R-elements are not T — "Some R are not T" (IV) follows. Neither II nor III can be derived, since we don't know how P or Q specifically relates to the R-elements that happen to be S.

Question Text:
Data Sufficiency. What is the two-digit number N?
I. The sum of its digits is 9.
II. The number obtained by reversing its digits is 27 less than N.

Options:
- **(A)** Statement I alone is sufficient, but II alone is not
- **(B)** Statement II alone is sufficient, but I alone is not
- **(C)** Both statements together are sufficient, but neither alone is
- **(D)** Each statement alone is sufficient
(e) Even both statements together are not sufficient

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (C)** — `Both statements together are sufficient, but neither alone is`

Detailed Step-by-Step Solution & Logical Derivation:
II alone: N − reversed = 9(tens digit − units digit) = 27, so tens − units = 3 — multiple numbers fit (41, 52, 63, 74, 85, 96), insufficient alone. I alone: digit sum = 9 also fits multiple numbers, insufficient alone. Together: tens − units = 3 and tens + units = 9 gives tens = 6, units = 3, so N = 63 — unique.

Correct Answer

> [!IMPORTANT]

(e) Even both statements together are not sufficient`

Detailed Step-by-Step Solution & Logical Derivation:
I alone: x/2 being an integer directly means x is even — sufficient. II alone: x^2 even is only possible if x itself is even (an odd number squared is always odd) — sufficient. Each statement alone is sufficient.

Question Text:
In a certain code, TRAIN is written as 23145, GAME is written as 6178, and MEAT is written as 7812. What is the code for GATE?

Options:
- **(A)** 6128
- **(B)** 6218
- **(C)** 6182
- **(D)** 8126

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (A)** — 6128

Detailed Step-by-Step Solution & Logical Derivation:
From TRAIN=23145: T=2,R=3,A=1,I=4,N=5. From GAME=6178: G=6,A=1,M=7,E=8. From MEAT=7812: confirms M=7,E=8,A=1,T=2. So GATE = G(6)A(1)T(2)E(8) = 6128.

Question Text:
In a code: "bright light shines" = "mo ta pu", "shines through night" = "pu ri ke", "night bright stars" = "ke mo lo", "stars through galaxy" = "lo ri zu". What is the code for "night light galaxy"?

Options:
- **(A)** ke ta zu
- **(B)** ke ta ri
- **(C)** mo ta zu
- **(D)** ke lo zu

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (A)** — `ke ta zu`

Detailed Step-by-Step Solution & Logical Derivation:
Comparing statement 1 & 2, the common word "shines" gets the common code "pu". Comparing 2 & 3, "night" gets the common code "ke". Comparing 1 & 3, "bright" gets the common code "mo". This leaves light=ta, stars=lo, through=ri, galaxy=zu (verified consistent with statement 4). So "night light galaxy" = ke ta zu.

A cuboid measuring 5 × 4 × 3 units is painted on all its outer surfaces and then cut into unit cubes. How many unit cubes have exactly 2 painted faces?

Visual Schematic / Logical Deduction Diagram:

```
5 × 4 × 3 Cuboid (60 unit cubes)
Total Painted Surface Cubes:
No face painted = (5-2) × (4-2) × (3-2) = 3 × 2 × 1 = 6 cubes.
Painted cubes = 60 - 6 = 54 cubes.

- **(B)** 22
- **(C)** 20
- **(D)** 26

Correct Answer

> [!IMPORTANT]

Detailed Step-by-Step Solution & Logical Derivation:
For a cuboid a×b×c, the number of unit cubes with exactly 2 painted faces = 4[(a−2)+(b−2)+(c−2)]. With a=5,b=4,c=3: 4[3+2+1] = 4×6 = 24.

Correct Answer

Detailed Step-by-Step Solution & Logical Derivation:
A complete five-pointed star (pentagram) figure contains 35 triangles in total (5 small tip triangles, 5 medium, 5 larger, and combinations up to the whole star) — a standard, well-documented result for this figure.

- **(D)** Aunt

Correct Answer

> [!IMPORTANT]

Detailed Step-by-Step Solution & Logical Derivation:
The man's wife is the only daughter-in-law of the woman's father, meaning the woman's father has only one son — the man himself. So the man is the woman's brother, making the woman the sister-in-law of the man's wife.

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (A)** — `5 m, North-East`

Detailed Step-by-Step Solution & Logical Derivation:

Net North-South displacement = 12−8 = 4 m North; net East-West = 9−6 = 3 m East. Distance = $\sqrt{(3^2+4^2)} = \sqrt{25} = 5$ m, in the general North-East direction.

Correct Answer

Detailed Step-by-Step Solution & Logical Derivation:
Using bearings (clockwise from North, East=90°): 90°+135°=225°(SW); 225°−90°=135°(SE); 135°+180°=315°, which is North-West.

Question Text:
Statements: Some pens are pencils. All pencils are erasers. No eraser is a sharpener.
Conclusions: I. No pencil is a sharpener. II. Some pens are erasers. III. Some erasers are not pens. IV. Either some pens are sharpeners or no pens are sharpeners.

Options:
- **(A)** Only I and II follow
- **(B)** I, II and IV follow
- **(C)** All follow
- **(D)** Only IV follows

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (B)** — I, II and IV follow

Detailed Step-by-Step Solution & Logical Derivation:
Pencils⊆erasers and erasers∩sharpeners=∅, so pencils∩sharpeners=∅ (I follows). Some pens are pencils, and pencils⊆erasers, so some pens are erasers (II follows). III isn't guaranteed (no information ensures an eraser outside the pen-pencil overlap exists). For IV: we know the pen-pencils aren't sharpeners, but nothing is said about pens that aren't pencils, so neither "some pens are sharpeners" nor "no pens are sharpeners" can be individually proven — exactly the condition for the standard either-or rule, so IV follows.

Question Text:
Statements: Only members are allowed entry. Some members are officers. All officers are trained.
Conclusions: I. Some trained persons are members. II. All those allowed entry are trained. III. Some members are trained.

Options:
- **(A)** I and III only
- **(B)** II and III only
- **(C)** All follow
- **(D)** None follows

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (A)** — `I and III only`

Detailed Step-by-Step Solution & Logical Derivation:
"Only members are allowed entry" means allowed-entry⊆members. Some members are officers, and officers⊆trained, so those members are trained — this directly gives "some members are trained" (III) and, by simple conversion, "some trained are members" (I). But since only some members are officers/trained, we cannot say all those allowed entry are trained (II fails, as non-officer members may not be trained).

I. $x^2 - 5x + 6 = 0$
II. $x > 2$

Options:

- **(B)** Statement II alone is sufficient, but I alone is not

- **(D)** Even both statements together are not sufficient

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (C)** — `Both statements together are sufficient, but neither alone is`

Detailed Step-by-Step Solution & Logical Derivation:
I alone: $x^2-5x+6=0$ factors to $(x-2)(x-3)=0$, giving $x=2$ or $x=3$ — two solutions, insufficient. II alone: $x>2$ alone is insufficient. Together: only $x=3$ satisfies both $x>2$ and the equation — sufficient together.

I. Angle A = 50°, and the triangle is isosceles with AB = AC.
II. Angle C = 65°.

Options:
- **(A)** Statement I alone is sufficient, but II alone is not
- **(B)** Statement II alone is sufficient, but I alone is not

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (A)** — `Statement I alone is sufficient, but II alone is not`

Detailed Step-by-Step Solution & Logical Derivation:
I alone: AB=AC means the angles opposite them are equal, so angle B = angle C; with angle A=50°, B+C=130°, and B=C gives B=65° — sufficient. II alone gives only one angle with no other relation — insufficient.

- **(B)** op qr vw
- **(C)** zx qr tu
- **(D)** op mn tu

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (A)** — `op qr tu`

Detailed Step-by-Step Solution & Logical Derivation:
Comparing statements pairwise for common words and codes: shines=pu, gamma=mn, bright=mo (from statements 1&3), giving delta=kl (from statements 1&3's remaining elements), light=ta, zeta=tu, epsilon=vw, eta=yz, alpha=zx, theta=op. So "theta beta zeta" = op qr tu.

- **(C)** 64
- **(D)** 60

Correct Answer

> [!IMPORTANT]

Detailed Step-by-Step Solution & Logical Derivation:
For an n×n×n cube, cubes with exactly 2 painted faces (edges) = 12(n−2); with exactly 3 (corners) = 8.
For n=6: edges=12×4=48, corners=8, so at least 2 = 48+8 = 56.

Detailed Step-by-Step Solution & Logical Derivation:
Q and R are siblings (Q is R's brother), so S (R's mother) is also Q's mother. P is Q's father, so P and S are Q's parents — meaning P is S's husband. Since T is defined as S's husband, P and T are the same person.

- **(A)** 15 m, North-East
- **(B)** 15 m, North-West
- **(C)** 13 m, North-East
- **(D)** 17 m, North-East

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (A)** — `15 m, North-East`

Detailed Step-by-Step Solution & Logical Derivation:

Net East-West = 14−5 = 9 m East; net North-South = 20−8 = 12 m North. Distance = $\sqrt{(9^2+12^2)} = \sqrt{225} = 15$ m, direction North-East.

Question Text:

A ship sails 10 km from port on a bearing of 030° (N30°E), then sails 10 km on a bearing of 150° (S30°E). What is the ship's final position relative to the port?

Options:

- **(A)** 10 km due East (bearing 090°)
- **(B)** 10 km due North
- **(C)** 17.3 km, bearing 060°
- **(D)** 10 km, bearing 120°

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (A)** — `10 km due East (bearing 090°)`

Detailed Step-by-Step Solution & Logical Derivation:
Leg 1 (bearing 030°, 10 km): East = 10 sin30° = 5, North = 10 cos30° = 5√3. Leg 2 (bearing 150°, 10 km): East = 10 sin150° = 5, North = 10 cos150° = −5√3. Totals: East = 5+5 = 10, North = 5√3−5√3 = 0. Final position: 10 km due East (bearing 090°).

Correct Answer

Detailed Step-by-Step Solution & Logical Derivation:
Differences are 3, 7, 15, 31 — each is 2^n-1 (n=2,3,4,5); next difference is $2^6-1=63$. 58+63 = 121.

Question Text:
Statements: All toys are games. All games are activities. Some crafts are not activities. No craft is a hobby.
Conclusions: I. All toys are activities. II. Some crafts are not hobbies. III. No toy is a craft.

Options:
- **(A)** Only I follows
- **(B)** I and II follow
- **(C)** I, II and III follow
- **(D)** None follows

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (B)** — `I and II follow`

Detailed Step-by-Step Solution & Logical Derivation:
Toys⊆games⊆activities, so all toys are activities (I follows). "Some crafts are not activities" confirms crafts exist, and since no craft is a hobby, those crafts are also not hobbies — "some crafts are not hobbies" follows (II). III is not guaranteed, since nothing links toys specifically to crafts.

- **(B)** Only II and III follow
- **(C)** All follow
- **(D)** None follows

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (C)** — `All follow`

Detailed Step-by-Step Solution & Logical Derivation:
Researchers⊆scholars, and scholars∩lazy=∅, so researchers∩lazy=∅ (I). Some lazy are students, and since scholars∩lazy=∅, those lazy-students are not scholars — "some students are not scholars" (II). Those same lazy-students are also students, and all students are young, so those lazy-students are young — "some young people are lazy" (III). All three follow.

Question Text:
Data Sufficiency. If x and y are positive integers, what is the remainder when x is divided by y?
I. x = 5y + 3
II. y = 7

Options:
- **(A)** Statement I alone is sufficient, but II alone is not
- **(B)** Statement II alone is sufficient, but I alone is not
- **(C)** Both statements together are sufficient, but neither alone is
- **(D)** Even both statements together are not sufficient

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (C)** — `Both statements together are sufficient, but neither alone is`

Detailed Step-by-Step Solution & Logical Derivation:
I alone: x=5y+3 only gives remainder 3 if y>3; for small y (e.g., y=2, x=13, 13÷2 leaves remainder 1, not 3) it fails — insufficient alone. II alone: y=7 with x unknown is insufficient. Together: x=5(7)+3=38, and 38÷7 leaves remainder 3 (valid since 3<7) — sufficient together.

Question Text:
Data Sufficiency. In how many days can A and B complete a job together?
I. A is twice as efficient as B.
II. A alone can complete the job in 12 days.

Options:
- **(A)** Statement I alone is sufficient, but II alone is not
- **(B)** Statement II alone is sufficient, but I alone is not
- **(C)** Both statements together are sufficient, but neither alone is
- **(D)** Even both statements together are not sufficient

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (C)** — `Both statements together are sufficient, but neither alone is`

Detailed Step-by-Step Solution & Logical Derivation:
II alone gives only A's rate (1/12), with B's rate unknown. I alone gives only a ratio (2:1), with no absolute rate. Together: A's rate=1/12, B's rate=1/24 (half of A's), combined rate=1/12+1/24=3/24=1/8, so together they take 8 days — sufficient together.

- **(B)** wv nk qm
- **(C)** ou nk rp
- **(D)** wv xy rp

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (A)** — `wv nk rp`

Detailed Step-by-Step Solution & Logical Derivation:
Pairwise comparison of the 5 statements resolves every word: data=zt, packet=rp, loss=qm, causes=xy, retransmission=lp, increases=wv, latency=ou, affects=nk. So "increases affects packet" = wv nk rp.

Question Text:
A rectangular cuboid is cut by 2 parallel cuts along its length, 1 cut along its breadth, and 3 cuts along its height (each cut perpendicular to that dimension), producing smaller cuboids from an originally fully-painted surface. How many of the resulting small cuboids have exactly 1 painted face?

Options:
- **(A)** 4
- **(B)** 6
- **(C)** 8
- **(D)** 2

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (A)** — `4`

Detailed Step-by-Step Solution & Logical Derivation:
With 2 cuts in length (3 pieces), 1 cut in breadth (2 pieces), 3 cuts in height (4 pieces), every piece touches an outer breadth-face (since there's no "middle" breadth layer). A piece has exactly 1 painted face only if it is interior in BOTH length and height (contributing 0 from each) while contributing exactly 1 from breadth (which is unavoidable). Interior length positions = 1 (out of 3), interior height positions = 2 (out of 4), and both breadth pieces qualify: 1×2×2 = 4.

- **(B)** 90
- **(C)** 81
- **(D)** 110

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (A)** — `100`

Detailed Step-by-Step Solution & Logical Derivation:
Choosing 2 of the 5 horizontal lines and 2 of the 5 vertical lines of a 4×4 grid gives a rectangle:

- **(C)** Q + M ÷ N
- **(D)** M × Q ÷ N

Correct Answer

Correct Answer

> [!IMPORTANT]

Detailed Step-by-Step Solution & Logical Derivation:
Decomposing each 10 m leg into East/North components (each at 45°, so $\pm 5\sqrt{2}$ in each axis): totals work out to East$=-5\sqrt{2}$, North$=+5\sqrt{2}$, giving a resultant of $\sqrt{[(5\sqrt{2})^2+(5\sqrt{2})^2]}=\sqrt{100}=10$ m, in the North-West direction.
