- **(B)** 3

- **(D)** 5

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (B)** — 3

Detailed Solution & Formula Deduction:
In a 2 × 2 matchstick grid (12 sticks total, forming four 1×1 squares and one 2×2 square):
To eliminate all 5 squares with the minimum number of removals, we need 3 sticks.
Removing 2 sticks can at most destroy four 1×1 squares (by removing the two interior central sticks), but the outer perimeter still forms the complete 2×2 square. To break both the four 1×1 squares and the outer 2×2 square, at least 3 sticks must be removed (e.g., one top outer stick, one bottom outer stick, and one internal vertical stick).
Minimum = 3.

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (C)** — `30`

Detailed Solution & Formula Deduction:
Determining the circular wheel formula:
- Wheel 1: T=3, R=5, B=4, L=7, Centre=14.
Formula: Centre = (T × B) + L - R = (3 × 4) + 7 - 5 = 12 + 2 = 14 (Checked!)
- Wheel 2: T=2, R=6, B=5, L=3, Centre=7.
Formula: Centre = (T × B) + L - R = (2 × 5) + 3 - 6 = 10 - 3 = 7 (Checked!)
- Wheel 3: T=4, R=3, B=6, L=9, Centre=?
Formula: Centre = (T × B) + L - R = (4 × 6) + 9 - 3 = 24 + 6 = 30.

Detailed Solution & Formula Deduction:
58. Rule: Centre = (T+B)×(R+L) − (T×B + R×L). Wheel 1: (5+7)(3+2)−(5×7+3×2) = 60−41 = 19 ✓. Wheel 2: (4+9)(6+3)−(4×9+6×3) = 117−54 = 63 ✓. Wheel 3: (8+6)(5+4)−(8×6+5×4) = 126−68 = 58.

Detailed Solution & Formula Deduction:
6. This was verified by exhaustive computer search over all 24 sticks and all 14 squares (nine 1×1, four 2×2, one 3×3): no set of 5 or fewer sticks intersects every square's stick-set, but a 6-stick set exists that does (for example, removing the sticks at positions H(0,0), H(1,0), H(1,1), H(2,1), H(0,2) and V(2,2) breaks all 14 squares). Minimum = 6.

Correct Answer

> **Verified Answer Key**: (B)** — `4`

Detailed Solution & Formula Deduction:
4. Each of the 4 outer squares shares exactly one stick with the centre square and no sticks with each other. Removing one shared stick breaks both the centre and that one arm, but each arm needs its own dedicated removal (no single stick touches two different arms), so at least 4 removals are required — and 4 suffice (remove all 4 centre-arm shared sticks). Verified by exhaustive computer search over all 16 sticks and 5 squares.

Puzzle Statement:
Circular wheel. Each wheel has numbers at Top, Right, Bottom, Left and a Centre number formed by the same rule.
Wheel 1: T = 8, R = 2, B = 6, L = 3, Centre = 41
Wheel 2: T = 10, R = 4, B = 5, L = 2, Centre = 65
Wheel 3: T = 12, R = 3, B = 9, L = 5, Centre = ?

```
     Wheel 1             Wheel 2             Wheel 3
       [ 8 ]               [ 10 ]              [ 12 ]

- **(C)** 90
- **(D)** 78

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (A)** — `85`

Detailed Solution & Formula Deduction:
85. Rule: Centre = $(T-L)^2 + (B-R)^2$. Wheel 1: $(8-3)^2+(6-2)^2 = 25+16 = 41$ ✓. Wheel 2: $(10-2)^2+(5-4)^2 = 64+1 = 65$ ✓. Wheel 3: $(12-5)^2+(9-3)^2 = 49+36 = 85$.

Correct Answer

> [!IMPORTANT]
> **Verified Answer Key**: (B)** — `27`

Detailed Solution & Formula Deduction:
27. Rule: cell(r,c) = $r^2+c^2+r\times c$ (symmetric in r and c, so the matrix itself is symmetric about its diagonal — note how cell(1,2)=cell(2,1)=7). Row 3, column 3: $3^2+3^2+3\times3 = 9+9+9 = 27$.
