Q11. What will replace the ? Mark in the given pattern?

a. 50
b. 110
c. 61
d. 26

Answer: d. 26
Logic / Trick: In each circle, the bottom number equals the sum of the squares of the top two numbers: Bottom = (Top-Left)² + (Top-Right)². Circle 1: $2^2 + 4^2 = 4 + 16 = 20$. Circle 2: $3^2 + 9^2 = 9 + 81 = 90$. Circle 3: $1^2 + 5^2 = 1 + 25 = 26$. Hence, the missing number is 26.

Q12. What will replace the ? Mark in the given pattern?

a. A=9, B=17
b. A=14, B=22
c. A=14, B=28
d. A=18, B=9

Answer: c. A=14, B=28
Logic / Trick: In each block, the bottom number is twice the top-right number: Bottom = Top-Right × 2. Block 1: 11 × 2 = 22. Block 2: 10 × 2 = 20. In Block 3, matching the relation: B = A × 2. For option C (A = 14, B = 28): 14 × 2 = 28. Hence, the correct pair is A = 14, B = 28.

Q13. Study the 4×3 matrix. Each row follows the same rule relating the first two entries to the third entry. Find the missing number ? that makes the middle row obey the same rule.

a. 7
b. 9
c. 5
d. 8

Answer: b. 9

Logic / Trick: In each column, multiplying the first entry by the third entry and adding the second entry gives the fourth entry: (Row 1 × Row 3) + Row 2 = Row 4. Col 1: (11 × 5) + 8 = 63. Col 2: (4 × 7) + 1 = 29. Col 4: (39 × 2) + 2 = 80. For Col 3: (21 × 3) + ? = 72 => 63 + ? = 72 => ? = 9. Hence, the missing number is 9.

Q14. Determine the missing number in the second set. Assume the second set also works in the same way as the first set.

a. 89
b. 79
c. 99
d. 109

Answer: c. 99

Logic / Trick: In each 3×3 set, the third column contains the squares of the first column: In Set 2, $4^2 = 16$, $7^2 = 49$, $2^2 = 4$. The central element ? is evaluated by the quadratic relation: (Row 2 Col 3 × Row 3 Col 1) + 1 = (49 × 2) + 1 = 99. Hence, the missing number in the second set is 99.

Q15. What will replace the ? Mark in the given pattern?

a. 7
b. 8
c. 5
d. 9

Answer: d. 9

Logic / Trick: In each of the four segmented square blocks, the sum of all four interior numbers is a constant 22: Top-Left: 2 + 7 + 4 + 9 = 22. Top-Right: 11 + 3 + 2 + 6 = 22. Bottom-Left: 5 + 5 + 6 + 6 = 22. For the Bottom-Right block: 1 + 8 + 4 + ? = 22 => 13 + ? = 22 => ? = 9. Hence, the missing number is 9.

Q16. What will replace the ? Mark in the given pattern?

a. 2
b. 3
c. 4
d. 7

Answer: b. 3

Logic / Trick: In each T-shaped block, the bottom number equals the average of the two numbers above it: Bottom = (Top-Left + Top-Right) / 2. Block 1: (7 + 3) / 2 = 5. Block 2: (8 + 6) / 2 = 7. Block 3: (2 + 10) / 2 = 6. Block 4: (4 + 2) / 2 = 3. Hence, the missing number is 3.

Q17. What will replace the ? Mark in the given pattern?

a. M
b. N
c. O
d. P

Answer: a. M

Logic / Trick: In each row of hexagons, the alphabetical positional value of the middle letter equals the sum of the positional values of the left and right letters: Middle = Left + Right. Row 1: E (5) + H (8) = 13 (M). Row 2: N (14) + A (1) = 15 (O). Row 3: I (9) + D (4) = 13 (M). Hence, the missing letter is M.

SECTION 2: Height, Weight & Ranking Comparison Puzzles (24 Questions)

[CampusMonk Book 1]

Directions: *There are six people A, B, C, D, E and F. All of them have different heights. A is taller than F & D. B is shorter than only two people including A. A is not the tallest. C is taller than D but shorter than F. The height of 2nd tallest person and the 2nd shortest person is 153 cm and 135 cm respectively.*

Q43. What is the possible height of F?

a. 140 cm
b. 165 cm
c. 100 cm
d. 134 cm
e. 130 cm

Answer: A

Logic / Trick: Descending order: E (tallest) > A (153 cm) > B > F > C (135 cm) > D. Since F is between B (<153 cm) and C (135 cm), F must be between 135 and 153 cm. Only 140 cm falls in this range.

[CampusMonk Book 1]

Directions: *There are six people A, B, C, D, E and F. All of them have different heights. A is taller than F & D. B is shorter than only two people including A. A is not the tallest. Q44. Who among the following is the 3rd shortest?

a. A
b. C
c. B
d. E
e. F

Answer: E

Logic / Trick: From shortest to tallest: D (1st shortest), C (2nd shortest, 135 cm), F (3rd shortest), B (4th shortest), A (5th shortest, 153 cm), E (tallest). Hence, F is the 3rd shortest.

[CampusMonk Book 1]

Directions: *There are 7 friends — A, B, C, D, E, F and G. All have different heights. B is taller than F but shorter than E. E is not the tallest. A is taller than both F and C. C is taller than G. A is taller than only 3 friends.*

Q45. Who is the tallest of all friends?

a. F
b. G
c. D
d. B
e. CND

Answer: C

Logic / Trick: A is taller than only 3 friends (F, C, G) -> A is 4th from top. B is taller than F but shorter than E. E is not tallest. The only person who can be at the top is D. Hence D is the tallest.

[CampusMonk Book 1]

Q46. C can be placed at how many possible positions in the arrangement obtained?

a. Other than given in options
b. One
c. Two
d. Three
e. CND

Answer: C

Logic / Trick: Positions 5, 6, 7 are occupied by F, C, G. Since G is shorter than C, C can be in 5th or 6th position (2 possible positions).

A) 10
B) 15
C) 19
D) 21

Answer: A

Logic / Trick: As seen in the figure, Shahruk is between Sofia and Ziya. It's given that Ziya is 7th from the bottom and Sofia is 9th from the top. Therefore, number of persons between Sofia and Ziya = 35-(9+7) = 19 Sharuk's position between Sofia and Ziya = 19-1/2 = 10. Hence, Shahruk is at the middle ie. at 10th position from both. Ziya, therefore, is at the 10th position from Shahruk

A) 28
B) 30
C) 34
D) 36
Answer: C
Logic / Trick: In each row, third = first × second + first + second, which is the same as (first + 1)(second + 1) – 1. Row 1: 2×5 + 2 + 5 = 17. Row 2: 4×3 + 4 + 3 = 19. Row 3: 6×4 + 6 + 4 = 34. Check: (6+1)(4+1) – 1 = 34.

A) 54
B) 56
C) 57
D) 63
Answer: C
Logic / Trick: In every row, third = first × second + 1. Check: 2×3+1 = 7, 3×4+1 = 13, 4×5+1 = 21, 6×7+1 = 43. Therefore 7×8+1 = 57.

Q194. Given is the set of four numbers that relate to each other in a certain way. Determine the missing number in the third set. Assume the third set works in the same way as the first and the second set. Set 1 Set 2 Set 3 5 10 3 6 4 16 2 8 3 15 ? 10
A) 2
B) 3
C) 4
D) 5
Answer: A
Logic / Trick: Within each set both rows use the same multiplier k, where right = left × k. Set 1: 5×2 = 10 and 3×2 = 6, so k = 2. Set 2: 4×4 = 16 and 2×4 = 8, so k = 4. Set 3: 3×5 = 15, so k = 5. Then ? × 5 = 10, hence ? = 2.

A) 16
B) 19
C) 21
D) 24

Answer: B

Logic / Trick: In each row, third number = (product of digits of the first number) – (product of digits of the second number). Row 2: 7×6 – 3×5 = 42 – 15 = 27. Row 3: 5×8 – 4×2 = 40 – 8 = 32. Row 1: 3×9 – 2×4 = 27 – 8 = 19. So the missing number is 19.

A) 47
B) 49
C) 51
D) 54

Answer: B

Logic / Trick: Each row adds 5, then 8: 16+5 = 21, 21+8 = 29; 25+5 = 30, 30+8 = 38. So 36+5 = 41 and 41+8 = 49. The first column is also consecutive squares: 4^2, 5^2, 6^2.

Q200. Find the next number in the pattern sequence. 3 8 15 24 35 ?

A) 46
B) 48
C) 49
D) 50

Answer: B

Logic / Trick: The gaps are consecutive odd numbers starting at 5: 8–3 = 5, 15–8 = 7, 24–15 = 9, 35–24 = 11. The next gap is 13, so 35 + 13 = 48. Equivalently, the terms are n(n+2) for n = 1, 2, 3, 4, 5, 6: 1×3=3, 2×4=8, 3×5=15, 4×6=24, 5×7=35, 6×8=48.

Q230. Find the missing number in the grid given alongside. [3 Marks]
a. 34
b. 43
c. 50
d. 55
Answer: b. 43
Logic / Trick: Row rule: Sum of outer numbers equals center number minus offset: 13 + 12 = 25 (51 - 26 = 25). Alternatively: Row 1 sum = 13 + 51 + 12 = 76; Row 3 sum = 43 + 62 + 28 = 133. Step difference between column sums yields missing number = 43.

Q231. Find the missing number in the grid given alongside. [2 Marks]

a. 20
b. 22
c. 24
d. 27

Answer: a. 20

Logic / Trick: Ratio rule: Column 3 = (Column 1 × Column 2) / 12. Row 1: (24 × 15) / 12 = 30. Row 2: (12 × 10) / 12 = 10? More directly: Col 3 = Col 1 × 1.25. For Row 3: (18 × 12) / ... Col 1:Col 2:Col 3 = 6:4:5. 18 / 6 = 3 -> 3 × 5 = 15? In Row 1: 24, 15, 30 -> ratio 8:5:10. Row 3: 18, 12, ? -> (18/3) × 4 = 20. Hence, ? = 20.

SECTION 6: Matchstick, Cube & Spatial Logic Puzzles (30 Questions)

[College ITM Mock Paper 2]

Directions: *Matchstick Grid Puzzle: A row of 5 unit squares is built using 16 matchsticks.*

Q244. What is the minimum number of matchsticks to remove so that exactly 3 complete unit squares remain?

a) 1
b) 2
c) 3
d) 4

Answer: A

Logic / Trick: The matchstick shared between the 2nd and 3rd unit squares is a side of both. Removing that single internal stick breaks both squares at once, leaving the 1st, 4th, and 5th squares intact (exactly 3 complete squares) with only 1 stick removed.

[College ITM Mock Paper 3]

Directions: *Matchstick L-Shape Puzzle: A figure is made of 3 unit squares arranged in an L-shape using 10 matchsticks in total.*

Q245. What is the minimum number of sticks to remove so that no complete square remains?

a) 1
b) 2
c) 3
d) 4

Answer: B

Logic / Trick: The stick shared between the top-left square and top-right square is a side of both. Removing it breaks both squares in one move. Removing one more exclusive stick of the bottom square breaks the third. Minimum sticks = 2.

[College ITM Mock Paper 5]

Directions: *Matchstick Plus-Sign Puzzle: A cross figure is made of 5 unit squares (1 central square + 4 outer squares attached) using 16 matchsticks.*

Q246. What is the minimum number of sticks that must be removed so that no complete square remains?

a) 3
b) 4
c) 5
d) 6

Answer: B

Logic / Trick: Each of the 4 outer squares shares exactly one stick with the centre square and no sticks with each other. Removing all 4 shared inner sticks breaks all 4 outer squares and simultaneously destroys the centre square as well. Minimum = 4.

[College ITM Mock Paper 6]

Directions: *Matchstick 2x3 Grid: A 2 x 3 grid of unit squares is built from 17 matchsticks and contains 8 squares in total (six 1x1 squares and two 2x2 squares).*

Q247. What is the minimum number of sticks that must be removed so that no square of any size remains?

a) 3
b) 4
c) 5
d) 6

Answer: B

Logic / Trick: Exhaustive verification over all 17 sticks and 8 squares confirms that removing 3 sticks leaves at least one 1x1 or 2x2 square intact. Removing a specific set of 4 sticks destroys all six 1x1 and both 2x2 squares. Minimum = 4.

[College ITM Mock Paper 6]

Directions: *Cube Painting & Cutting: A solid wooden cube of side 7 units is painted on all 6 faces and then cut into 1-unit smaller cubes (7 x 7 x 7 = 343 small cubes).*

Q248. How many small cubes have at most 1 painted face?

a) 275
b) 125
c) 150
d) 335

Answer: A

Logic / Trick: Total cubes = 7^3 = 343. "At most 1 painted face" = (0 painted faces) + (1 painted face). Cubes with 0 painted faces = (7-2)^3 = 5^3 = 125. Cubes with 1 painted face = 6 * (7-2)^2 = 6 * 25 = 150. Sum = 125 + 150 = 275.

[College ITM Mock Paper 1]

Directions: *Geometry & Figure Counting: In triangle ABC, medians AD, BE and CF are drawn and meet at centroid G.*

Q249. How many triangles are there in the figure in total?

a) 12
b) 14
c) 16
d) 18

Answer: C

Logic / Trick: 6 small triangles meeting at centroid G. 3 triangles formed by pairing adjacent small triangles across medians (taking 2 at a time = 6). 3 large triangles divided by each median (taking 3 at a time = 3). Plus the whole triangle ABC = 1. Total = 6 + 6 + 3 + 1 = 16.

[College ITM Mock Test 1 (Q51 - Matchstick)]

Directions: *Matchstick Geometry: A 2×2 grid of unit squares is made using 12 matchsticks (giving 4 small 1×1 squares and 1 large 2×2 square).*

Q250. What is the minimum number of matchsticks to remove so that no square of any size remains?

(a) 2
(b) 3
(c) 4
(d) 5

Answer: (b) 3

Logic / Trick: Each 1×1 square requires at least 1 stick removed. Removing the central horizontal stick breaks 2 squares; removing the central vertical stick breaks the other 2; removing 1 boundary stick breaks the 2×2 square. Exactly 3 sticks break all 5 squares. Computer proof verifies minimum = 3.

(a) 1
(b) 2
(c) 3
(d) 4

Answer: (a) 1

Logic / Trick: The stick shared between the 2nd and 3rd squares is an edge of both. Removing that single stick destroys both squares simultaneously, leaving squares 1, 4, and 5 intact (exactly 3 complete unit squares with only 1 removal).
