INFOSYS SE ASSESSMENT 2026 • OFFICIAL PREPARATION VAULT

🧩 Section 5: Puzzle Solving — Timed Sectional Mock Tests (4 Questions | 10 Minutes)

Section: 09_Mock_Test_Series | **Drive Date:** 5th & 6th November 2026 | **Status:** 100% Solved & Verified

🧩 Section 5: Puzzle Solving — Timed Sectional Mock Tests (4 Questions | 10 Minutes)

> **Official Pattern:** Section 5 of Infosys Systems Engineer (SE) Exam
> **Allotted Time:** 10 Minutes (Countdown Timer)
> **Question Count:** 4 Questions per Mock Paper (2 Standard + 2 Advanced High-Weightage)
> **Marking Scheme:** +2 Marks (Standard) / +3 Marks (Advanced Grid Puzzles)
> **Negative Marking:** Zero (0)

📝 SECTIONAL MOCK TEST 01 (4 Questions | 10 Mins)

Question 1 (3x3 Numerical Grid - 2 Marks)

Find the missing value (?) in the following matrix:

```
[ 7   4   9 ]
[ 8   5   6 ]
[ 5   ?   7 ]
```

Row operations: $\text{Row 1 Sum} = 20, \text{Row 2 Sum} = 19, \text{Row 3 Sum} = 18$.

- A) 4
- B) 5
- C) 6
- D) 7

Correct Answer: C

Solution: Target row sum decreases by 1 in each row: Row 1 sum = $7 + 4 + 9 = 20$. Row 2 sum = $8 + 5 + 6 = 19$. Row 3 sum must be 18: $5 + ? + 7 = 18 \Longrightarrow ? = 18 - 12 = 6$.

Question 2 (Geometric Star Polygon Puzzle - 2 Marks)

In a 5-pointed star, the numbers at the 5 points are 2, 3, 5, 7, 11 (the first 5 primes). The number inside the central pentagon is determined by multiplying the two highest outer points and subtracting the sum of the remaining three. What is the central value?

- A) 67
- B) 70

- C) 73
- D) 77

Correct Answer: A

Solution: Two highest outer points are 11 and 7. Product = $11 \times 7 = 77$. Remaining three points are 2, 3, 5. Sum = $2 + 3 + 5 = 10$. Central value = $77 - 10 = 67$.

Question 3 (High-Weightage 4x4 Grid - 3 Marks)

Find the missing number in the 4x4 grid:

```
[ 2   3   5    30 ]
[ 3   4   2    24 ]
[ 4   1   6    24 ]
[ 5   2   4     ? ]
```

- A) 36
- B) 40
- C) 44
- D) 48

  Correct Answer: B

  Solution: Inspecting each row:

  Row 1: $2 \times 3 \times 5 = 30$.

  Row 2: $3 \times 4 \times 2 = 24$.

  Row 3: $4 \times 1 \times 6 = 24$.

  Row 4: $5 \times 2 \times 4 = 40$.

Question 4 (Cryptarithmetic Verbal Addition - 3 Marks)

In the addition:

```
  T W O
+ T W O
-------
  F O U R
```

Each letter represents a distinct digit from 0 to 9. If $O = 4$, what is the digit corresponding to W?

- A) 2
- B) 3
- C) 7
- D) 8

Correct Answer: B

Solution: If $O = 4$, then in units column: $O + O = 4 + 4 = 8 = R$. Since F is a carryover from $T + T$, $F = 1$. Now $T + T$ must produce $10 + O = 14$ or 15 with carry. If $T = 7$, $7 + 7 = 14$. Then in tens column: $W + W$ must not generate a carry to $T + T$, so $2W = U < 10$. If $W = 3$, $3 + 3 = 6 = U$. Letters: $T=7, W=3, O=4, F=1, U=6, R=8$. All distinct! Hence $W = 3$.
