Question 27 [Marks: +{'positive': 1, 'negative': 0, 'negativeUnattempted': 0}]

Passage
Many software companies now treat code reviews as a daily habit rather than a last-minute check. A second pair of eyes often finds defects that automated tests miss, especially unclear names, missing edge cases and weak error messages. Reviews also spread knowledge: a junior engineer who reads a senior colleague's change learns the team's style faster than by studying a handbook. The practice has a cost. Long review queues delay releases, and harsh comments discourage people from sharing early drafts. Teams that keep reviews short, set a response-time target and discuss design before large patches are written usually keep both quality and speed. Tools help, but they cannot replace an agreed standard of courtesy and focus.
Which of the following is mentioned as a cost of code reviews?

Options:
