Passage
Open-source licences let companies use shared libraries without writing every component from scratch. That speed has a condition: teams must track which licence each library carries. A copyleft licence can require the company to publish its own source if the library is mixed into a shipped product. Permissive licences are lighter, but they still ask for credit. Legal reviews that happen only a week before release often find a blocked component and force a rewrite. Groups that keep a licence inventory from the first sprint avoid that scramble.
A copyleft licence may require a company to

- **(B)** rename the library
- **(C)** publish its own source if the library is mixed into a shipped product
